Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total assets** exclude contra accounts and contingent liabilities. **Note:** Banks that did not provide current data are **excluded** from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990; Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)—** A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)—** A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)—** Consolidated data. **(t)—** Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)—** Data are not consolidated for affiliates more than 50% owned. **(v)—** Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(†)—** Rank based on revised asset total for 1988. **(‡)—** Restated to reflect changes in consolidation in 1989. **N.A.—** Not available.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total assets** exclude contra accounts and contingent liabilities. **Note:** Banks that did not provide current data are **excluded** from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990; Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(†)**— Rank based on revised asset total for 1988. **(‡)**— Restated to reflect changes in consolidation in 1989. **N.A.**— Not available.

Compiled by American Banker, Copyright 1990.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total assets** exclude contra accounts and contingent liabilities. **Note:** Banks that did not provide current data are **excluded** from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990; Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(†)**— Rank based on revised asset total for 1988. **(‡)**— Restated to reflect changes in consolidation in 1989. **N.A.**— Not available.

Top 500 Banks: Total Assets

Dollar amounts in billions

	Number Of Banks 12/31/89	Total Assets 12/31/89	Number Of Banks 12/31/88	Total Assets 12/31/88	Percent Change
U.S. Banks	119	$ 1,939.4	116	$ 1,927.6	+ 6.1
Foreign Banks	381	15,082.9	384	14,020.2	+ 7.6
Top 500 Banks	500	17,022.3	500	15,947.8	+ 6.7

To avoid double counting, assets for banks owned by other banks in the top 500 are excluded.

Addendum to Tabulation

Data for some banks were received after American Banker's July 12th deadline for inclusion in today's listing. The banks appear below with the 1989 ranks they would have had if the data for all were received on time. (Dollar Amounts in Millions)

Asset Rank 12/89	Name of Bank	Assets 12/31/89	Assets 12/31/88	Asset Rank 12/88
92	**State Bank of India, Bombay**[1]	47,176	44,667	88
191	**Credit du Nord, Paris, France**[2]	20,440	19,718	179
399	**Bank Rakyat Indonesia, Jakarta**	8,479	6,183	496
935	**Hessische Landesbank Int'l, Luxembourg**	2,538	2,348	960

(1)— Data are for the fiscal yearend March 31, 1990. Although not included in the top 500 bank listing, American Banker was able to include the bank in the ranking of the top 100 banking companies that appears on page 27A.

(2)— A subsidiary of Compagnie Financiere de Paribas, Paris.

Data Source: American Banker's world bank survey. Data are checked against annual reports whenever possible. Consolidated data, including affiliates in which ownership exceeds 50%, are used whenever possible. **Date of figures:** Data for most banks are for yearend. **Exceptions:** Data for Japanese and Indian banks are for the fiscal year ended March 31, 1990; the Australian bank data are for fiscal year ended Sept. 30, 1989; and the Canadian bank data are for fiscal year ended Oct. 31, 1989. **Total assets** exclude contra accounts and contingent liabilities. **Equity Capital** is total shareholders' equity capital which includes the value of common and perpetual preferred stock, surplus, undivided profits, and capital reserves. Minority interest is excluded, whenever possible. **Equity Capital/Assets** is equity capital as a percentage of total assets. **(a)**— On April 1, Mitsui Bank and Taiyo Kobe Bank merged to form Taiyo Kobe Mitsui Bank. **(b)**— Acquired Victoire-Colonia Insurance Group in 1989. **(c)**— In March, Amsterdam-Rotterdam Bank and Algemene Bank Nederland began negotiations for a merger. **(d)**— Formed in 1989 by the merger of Nederlandsche Middenstandsbank (NMB Bank) and Postbank. **(e)**— In Aug. 1989, NCNB consolidated the operations of NCNB Texas National Bank, Dallas. **(f)**— The bank acquired Provinsbanken and Copenhagen HandelsBank at yearend 1989. **(g)**— The 1989 data are unconsolidated and the 1988 data are consolidated. **(h)**— Data were received too late for bank's inclusion in today's top 500 banks listing. **([1])**— Revised to exclude minority interest. **([2])**— revised. **(‡)**— Pro forma data for bank formed in 1989. **(†)**— Rank bank would have had, if it had been included.

Figures shown are the dollar values per unit of foreign currency. Most of the currencies are converted into dollars using the New York cable rate for the date shown. Unless otherwise noted, the exchange rates shown are for yearend 1989 and 1988, respectively. Exchange rates for dates other than 12/31/89 and 12/31/88 indicate that most or all banks in a country reported data as of the date indicated. **(a)**— Banks in country use Swiss francs. **(1)**— As of 9/30/89 and 9/30/88, respectively. **(2)**— The official rate for the new cruzado at yearend was $0.088. Since yearend, the market rate of the new cruzado has fallen 85% to $0.0166 as of 6/29/90. **(3)**— As of 10/31/89 and 10/31/88, respectively. **(4)**— As of 6/30/89 and 6/30/88, respectively. **(5)**— As of 3/31/90 and 3/31/89, respectively. **(6)**— As of 3/20/89 and 3/20/88, respectively. **(7)**— Dinar was devalued 10,000-to-1 shortly after yearend.

Brazil Won't Pay Arrears Before Start of Debt Talks

Reuters

RIO DE JANEIRO — Brazil's chief debt negotiator, Jorio Dauster, reiterated that the government would not pay arrears on its huge foreign debt before the start of negotiations with creditors.

"At this moment the government is not contemplating making any payment of arrears before starting negotiations," Mr. Dauster told a news conference here.

The government announced late Tuesday that an International Monetary Fund team would arrive in Brazil on Aug. 1 to begin a review of the country's economy and to initiate talks on a standby loan agreement.

Mr. Dauster said commercial bank creditors seeking payment of arrears would have to take their place in line behind international agencies and government lenders.

Payment Order Given

"First we are going to fix how much Brazil can pay," he said. "Then there exists a priority, a seniority of whom to pay."

First comes the IMF, Mr. Dauster added, because "whoever doesn't pay the IMF is dead." Next come international agencies such as the World Bank and the Inter-American Development Bank, which "cooperate with Brazil and bring new money."

Third comes the Paris Club of government creditors.

"I will only know what can be paid to [commercial] banks after I know what has been agreed with the other three groups because they are at the head of the queue," Mr. Dauster said.

Sumitomo Plans New York Unit

TOKYO — **Sumitomo Bank** Ltd. will set up a wholly owned subsidiary in New York in mid-1992 to control its fund management, securities, leasing, trust, and capital markets business in the United States.

The controlling unit, as yet unnamed, will be capitalized at $3 million, the Japanese city bank said in a statement.

Sumitomo also said it plans to establish in New York a fund management subsidiary capitalized at $40 million; a securities unit capitalized at $40 million; and a leasing subsidiary capitalized at $240 million. The parent company will directly own 90% of each of the three companies, and its controlling unit the other 10%.

The controlling subsidiary also will own 10% each of Sumitomo's wholly owned Sumitomo Bank Capital Markets Inc. and Sumitomo Bank of New York Trust Co.

bank assets, they failed to repeat the previous year's sweep of the top 10 places.

Dai-Ichi Kangyo Still No. 1

Once again leviathan Dai-Ichi Kangyo Bank Ltd., Tokyo was the world's largest bank, with $403.4 billion in assets.

But two French banks, $242.3 billion-asset Credit Agricole Mutuel and $231.8 billion-asset Banque Nationale de Paris, jumped into seventh and eighth places, respectively, from 11th and 14th.

Citicorp Wins Back No. 10 Spot

Citicorp, the largest U.S. institution, with assets of $227 billion at yearend 1989, regained the No. 10 spot, which it had held two years before.

Other strong gainers included $211 billion-asset Credit Lyonnais, Paris, which moved up five notches to 13th place, and $202.6 billion-asset Deutsche Bank, Frankfurt, up six spots to 16th.

Japan's Banks Take a Beating

Although Japanese banks built assets substantially in yen terms, 1989 was their toughest recent year. They were battered by rising interest rates, declining margins, lower profitability, and a capital shortfall three years before the deadline for meeting the 8% capital standard of the Bank for International Settlements.

Despite these problems, the Japanese had great success in raising capital. *American Banker* calculates that in 1989 the 30 largest Japanese banks boosted shareholder equity 9.97% in dollar terms, despite the fall in the yen.

'Hidden Assets' Deteriorate

A decline in Japanese stock prices this year has added to the banks' woes. The decline wiped out part of their "hidden assets" – unrealized gains on their stock holdings that represent an important part of their capital structure.

Although the Tokyo stock market has recovered much of its losses, the banks got a vivid demonstration of their vulnerability, a lesson that has made them more cautious about expansion.

U.S. banks, meanwhile, have been hobbled by a sluggish economy, poor profitability, rapidly deteriorating credit quality, and a hostile market for raising equity – trends that became visible in 1989 and accelerated this year.

The most ominous sign for U.S. institutions has been how little their capital has increased. In 1989 the equity of the 14 largest U.S. banking companies rose only 3.94%; their top competitors abroad boosted equity 12.8%.

> **"Our banks are basically operating with huge anchors around their necks. No matter how hard they run, they can't stay in place – because everybody else is moving faster."**
>
> **Robert Litan**
> *Brookings Institution*

'Everybody Else Moving Faster'

"Our banks are basically operating with huge anchors around their necks," said Robert Litan, a Brookings Institution banking expert. "No matter how hard they run, they can't stay in place – because everybody else is moving faster."

As a result, most large U.S. banking companies added assets slowly or not at all, and most dropped in rank in the *American Banker* survey.

BankAmerica and Morgan Slip

BankAmerica Corp., once the world's largest banking company, had assets of $97.2 billion at the end of 1989, slipping from the 40th to the 48th spot. J.P. Morgan & Co., with assets of $87.6 billion, dropped five places to 55th. And Security Pacific Corp., with $83.1 billion, slid three notches to 57th.

The only big U.S. gainer was NCNB Corp., with assets of $65.8 billion. NCNB, which absorbed First RepublicBank Corp. in Texas., more than doubled in size, becoming the world's 75th-largest banking company.

Strength in Europe

Banks in major European countries except Great Britain have benefited from a strong economic climate and healthy banking conditions.

"Generally, [European] banks have had quite good asset quality, lower levels of bankruptcy, quite strong loan growth, and favorable interest rate environments," said Sasha Serafimovski, an analyst with Morgan Stanley International, London.

Consolidation Trend

Much of the asset growth of the continent's largest institutions came from mergers, acquisitions, joint ventures, strategic alliances, and other moves to shore up their home markets and build beachheads elsewhere in preparation for European economic integration and the opening of the Eastern bloc.

In the past year, European banks have tried "to position themselves as major players in a united Europe," said Estela Piscope, an analyst with BHF Securities Corp., New York. "Many of the banks have proceeded to buy up smaller operations across borders."

For example, Banque Nationale de Paris, which increased assets 19.1% in 1989, acquired a 2% stake in Italy's Credito Romagnolo, opened 15 branches in Spain, built a strategic alliance with Germany's Dresdner Bank by exchanging directors, and established a joint venture leasing firm in Greece. In France, BNP bought the 78-branch Banque de Bretagne.

To back up their growth, European banks have added capital fast.

American Banker calculates that in 1989 German banks built equity by 24.71%, French banks by 18.72%, and Italian banks by 12.31%.

However, in the French and Italian cases, equity growth lagged behind the increase in assets. The ability to raise capital will be the most important restraint on banks' further growth in those countries. ☐

Analysts Seek Better Way to Size Up Banks

By FRED VOGELSTEIN

Reacting to one of the worst slumps in bank stocks since the real estate debacle of the early 1970s, a growing number of analysts are rethinking the way they examine banks.

They say the recent spate of large, unexpected changes in bank fundamentals has made their current set of financial tests less effective and some of their predictions no more accurate than weather forecasts.

"It's becoming increasingly clear that credit quality considerations are driving the stocks more than traditional factors like predictions of net interest margin or probability of expansion or takeover," said Raphael Soifer, at Brown Brothers Harriman & Co., New York.

ANALYSIS: *Follow-up on the news*

"We felt the only way one can really look at asset quality" is to come up with a new test, Mr. Soifer said.

Fleet/Norstar Shock

Most analysts agree that the changes in fundamentals are consequences of stiff regulatory examinations amid declining real estate values and souring leveraged loans.

Analysts and investors still talk with frustration about reports from Fleet/Norstar Financial Corp., for example, which surprised them in April, after an exam by regulators, by reporting a $600 million increase in problem loans for the first quarter.

"No one quite knows how to think about bank stocks anymore," said Roger Hillas, chairman of Meritor Savings Bank, Philadelphia, and a manager of two regional bank stock funds. "You think something is doing well, and then the roof caves in."

The Surprise Index

Mr. Soifer said he and his colleagues at Brown Brothers developed their new tool with such examples in mind. Their Surprise Index attempts to gauge how well banks have done over time at avoiding bad loans.

The index is based on two five-year sets of data from 1980 to 1989. It is meant to suggest how likely a bank is to make bad loans, or deal well with current problem loans.

"The thinking is that banks with better credit processes will deal with those problems better than others," Mr. Soifer said.

2 Bills Seek To End Curbs On Branching

By LOUIS GERHARDSTEIN

WASHINGTON — Moving to lift the remaining geographic restrictions on U.S. banks and speed the industry's consolidation, two key legislators introduced bills Thursday to allow full interstate banking and branching by 1994.

Observers said the legislation could prove the most significant affecting interstate expansion since the establishment of regional banking compacts in the early 1980s.

Those reciprocal multistate agreements spurred the creation of a new class of banking company, the superregional.

Tearing Down Walls

Sponsors of the bills introduced Thursday said the measures would tear down "the old, archaic walls between states" and increase the size and international competitiveness of U.S. banks.

"The legislation would relax most current restrictions on interstate banking," said Rep. Charles E. Schumer, D-NY, sponsor of the legislation in the House. He said his measure would "allow acquisition of banks by out-of-state holding companies after 1992 and authorize interstate branching after 1993."

Appearing at a Capitol Hill press conference with Sen. Christopher Dodd, D-Conn., who introduced an identical bill in the Senate, Mr. Schumer

Norwest Agrees to Buy United Banks of Denver

By NANINE ALEXANDER

CHICAGO — Norwest Corp. said on Thursday that it had agreed to acquire United Banks of Colorado Inc. in a stock swap valued at about $440 million.

The disclosure came as United announced that it lost $89.7 million in the second quarter, after taking a $95 million provision for problem loans. The Denver company also said it would take a $95 million charge in the second half, relating to problem loans and merger-related expenses.

A Big-Time Merger

Norwest's stock closed Thursday at $19.50, down 87.5 cents. United Banks rose $1.375 to $21.125.

A merger between the two

Student Lenders See No Crisis

By YVETTE D. KANTROW

NEW YORK — The financial woes of a Midwest company that issues guarantees on student loans is another in a series of blows to the government-backed program, but bankers see no cause for alarm.

Lenders and others in the business remain confident that the U.S. Department of Education is acting swiftly to resolve the problems of the Higher Education Assistance Foundation, a nonprofit corporation in Overland Park, Kan.

They say they are heartened by a quick decision made earlier this week by the Department of Education and the Office of Management and Budget to send a team to the foundation's computer facilities in Minnesota to review its financial records.

The foundation is struggling because of high default rates on loans. Its failure could result in losses at banks, which could not recoup from the company when student loans go into default.

Citicorp, the nation's largest

U.S. Banks Retreat from Global Ambitions

By JAMES R. KRAUS

Having spent decades expanding their overseas operations, America's big banks are heading into the 1990s dismantling them.

Tougher capital requirements, mounting credit problems, and heightened competition are forcing U.S. banks to scale back their overseas activities. Increasingly, they will have to rely on correspondent banking relationships for their international transactions.

No More Bandwagon

"Money-centers are coming off a decade of troubles in the international arena," John F. McGillicuddy, chairman of Manufacturers Hanover Corp., told bankers at the annual convention of the Bankers Association for Foreign Trade in April.

"So whereas 20 years ago, everyone was trying to get on the

COMMENT/*By Joseph C. Hu*

Mortgage-Backed Securities Show Impressive Resiliency

Defying the wide market fear, mortgage-backed securities have performed exceedingly well so far this year versus Treasuries of comparable average lives.

The yield spread between benchmark-coupon GNMAs and the 10-year Treasury has tightened to 118 basis points from 141 basis points at the end of 1989. This tightening was even more impressive in view of the lingering uncertainties caused by pending actions from various federal agencies that could significantly depress prices of mortgage securities.

Further, since early May, the market sentiment has turned more bullish with a 50-basis-point rally in long Treasury yields, and volatility has rebounded to cyclical highs. Both events normally cause mortgage-to-Treasury spreads to widen.

Questions that Investors Ask

Against this background, investors generally ask the following questions:

- At their current yield spreads, are mortgage securities rich to the comparable Treasuries?
- If the present adversary conditions continue, should mortgage securities be sold?
- Even if mortgage securities are rich at current levels of yield spreads, do they continue to have fundamental value? If they do, what sector among them is most attractive?

Belief in Fundamental Value

This article addresses these questions. I continue to believe that, at their current levels of yield spreads to Treasuries, mortgage securities have fundamental value.

While these spreads will no doubt oscillate in the short run, they will continue the tightening trend that started about a year ago.

Any significant widening in yield spreads in the future therefore represents buying opportunity for mortgage securities. The yield spread between benchmark-coupon GNMAs and the 10-year Treasury will narrow further, reaching 100 basis points by the end of this year. In my view, current-coupon passthroughs and certain sequential-pay and companion CMOs present value.

All But Quiet on the MBS Front

In recent weeks, the mortgage-backed securities market has been battered by more than its fair share of bad news. First, there were constant rumors about the liquidation of mortgage securities by the Resolution Trust Corp.

Rarely were the rumors confirmed; even when they were, the amount of rumored liquidation was always grossly exaggerated. The overhang of RTC action has deterred many investors from actively investing in mortgage securities.

Then, there was the growing doubt among investors concerning the continual robustness in the CMO market. The doubt was caused by a report that was unofficially confirmed by the Office of the Comptroller of the Currency that it will soon issue guidelines restricting commercial banks' investments in exotic CMO securities.

> **"At their current levels of yield spreads to Treasuries, mortgage securities have fundamental value."**

In the past year, commercial banks have been an important factor contributing to tightening mortgage-to-Treasury yield spreads through their investments in CMOs.

Capital Adequacy Revisited

As if things were not bad enough, the Treasury Department and the General Accounting Office recently revisited the issue of capital adequacy at government sponsored enterprises such as Fannie Mae and Freddie Mac.

They openly wondered whether, in order to minimize costs to taxpayers, these enterprises should obtain a top credit rating – otherwise, these enterprises should face termination of government support.

While the concern of capital adequacy is perfectly legitimate, the issue of severing federal government ties to these enterprises has caused some investors to hesitate purchasing securities guaranteed by Fannie Mae and Freddie Mac.

Worse still, in the past two months, the bond market rallied by nearly 50 basis points with Treasury yield volatility rebounding to cyclical highs of recent years. In general, as bearish instruments with mostly negative convexity, mortgage securities usually lag Treasuries in performance in a bullish and volatile environment.

Realizing Relative Value

Despite all the bad news, however, mortgage securities have performed well against Treasuries with comparable average lives. A little more than two months ago, when both the 10-year and 30-year Treasuries were yielding slightly above 9%, the yield spread between the benchmark-coupon GNMA and the 10-year Treasury hovered around 130 basis points.

This spread has actually tightened more than 10 basis points in recent trading sessions. There are at least three fundamental reasons that the relative value of

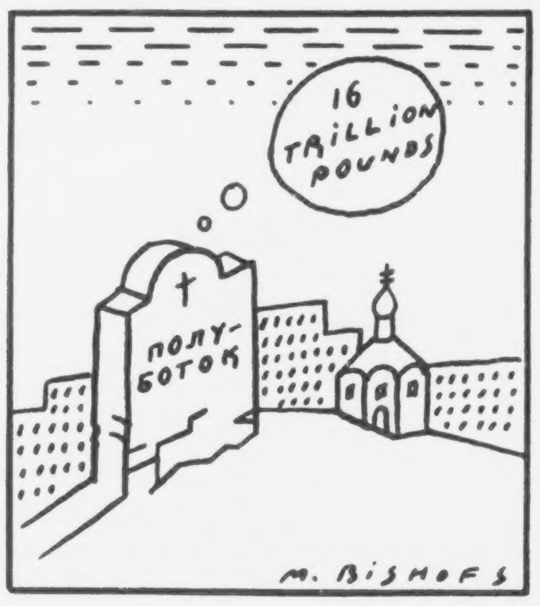
No Ticket, No Wash

The Bank of England has started rummaging through its musty archives, looking for a paper trail that could lead to a barrel of gold allegedly deposited there 270 years ago by a Ukrainian soldier.

Vladimir Yvorivsky, a member of the Ukraine's new parliament, estimates that the soldier's legacy of gold would have grown in value by now to about 16 trillion British pounds – or $29 trillion. The Ukrainian Soviet republic can't find the receipt, but it could use the money.



Maris Bishofs

LEGACY: Did a Ukrainian patriot leave a barrel of gold to his country almost 300 years ago?

Pavel Plubotok, a Ukrainian military leader, bequeathed the gold in his will to support a sovereign and independent Ukraine. On a visit to St. Petersburgh to negotiate Ukrainian independence with Czar Peter the Great, Mr. Polubotok was thrown in prison – and died there.

A spokesmen for the Bank of England, as reported by Reuters, issued a dry-as-dust statement last week saying that the bank, too, has been unable to find any record of the alleged deposit – or the treasure itself. "Now we're digging in our archives to see if we can trace the relevant account relationship," the spokesman said.

So far, the Ukrainian parliament has not demanded the return of the gold from the Old Lady of Threadneedle Street, as Britons affectionately call their central bank. But Mr. Yvorivsky told his fellow legislators that he intends to file an official request in the near future.

Mr. Yvorivsky's valuation of the barrel takes into account accrued interest over nearly three centuries. The Bank of England's spokesman, however, characterized the estimate as "fanciful – to say the least."

* * *

Sybil Made Her Do It

Lawyers who represent accused bank robbers may want to consider adding the "Sybil" defense to their arsenal of strategies.

"Sybil," a popular book published in 1974, tells the unhappy story of a woman afflicted with multiple personalities who led many separate lives.

Juanita Maxwell, 34, told a Florida judge that she suffers from the same malady: She robbed a bank when she was actually somebody else.

Ms. Maxwell, of Clearwater, Fla., is accused of robbing two branches of First Florida Bank in 1988. In pretrial hearings, she claimed she was powerless to prevent the bank jobs because they were actually pulled by "Wanda," one of her alternate personalities. She moved for acquittal on grounds of insanity. Pending the judge's decision, the trial begins next week.

"Wanda" and her other personalities have already helped Ms. Maxwell win an acquittal in a 1979 murder trial. Her pretrial arguments in this case persuaded Circuit Judge R. Grable Stoutamire to allow the jury to hear the unusual insanity defense.

To the prosecutors, it doesn't matter whether Ms. Maxwell knew of the robberies. Their concern is whether "Wanda" knew right from wrong when she held up the two bank branches.

Thornburgh Bunts

Attorney General Dick Thornburgh has been getting the raspberry lately from spectators who say that the Justice Department is not hustling enough in its offensive against fraud in the savings and loan industry.

Louise Krafft

Dick Thornburgh
U.S. attorney general

Mr. Thornburgh came out of the dugout swinging a heavy bat on Wednesday at the National Press Club in Washington, using some of baseball's colorful lingo to defend his record of runs, hits, and errors.

"There is one bit of 'inside baseball' I should notice," said the attorney general – an avid baseball fan – "since somebody is clearly throwing right at my head. That is the charge about a 'do-nothing' Justice Department.' "

Much of the alleged fraud in the thrift crisis took place in the mid-1980s. The clock is running out for the Justice Department because the statute of limitations on these cases will soon expire.

The attorney general took his warm-ups by describing the criticism as partisan "beanball," played by politicians from both parties looking for votes.

Defending his record, and the slowness of the pace, he said: "A baseball fan will sit through many a dull inning because he understands the game – and the ever-present chance of a game-winning home run or a ninth-inning rally." □

Japan's Politicians Leak Details of Loans to China

By IRENE KUNII
Reuters

TOKYO — Maverick Japanese politicians, eager to score political points, are rushing into China with promises of official loans. Meanwhile, angry government officials watch powerlessly from their offices.

On Wednesday, Kiichi Miyazawa, a leading member of the ruling Liberal Democratic Party, told Chinese Premier Li Peng in Beijing that Japan and China could exchange notes on the first tranche of an $5.4 billion loan package to Beijing in October.

One week earlier, a former foreign minister, Hiroshi Mitsuzaka, also visiting Beijing, told Chinese leaders that they could expect to receive the first loan installment in September and another early next year.

Government Disputes the Statements

None of this has been officially announced by the government in Tokyo, which insists that the timing and details have not yet been set and that an official envoy, yet to be appointed, would carry the news formally to Beijing.

"They're given a rundown of our policy plans before they leave, but they're not expected to speak out on behalf of the government," one official commented.

Chief Cabinet Secretary Misoji Sakamoto, commenting on Mr. Miyazawa's pledge in Beijing, said: "We won't be able to stop them [from talking], but I'm going to ask the Foreign Ministry to try and streamline traffic." Mr. Sakamoto is the government's top spokesman.

Legislators' Power Noted

The official said there was little that government officials could do about the unsanctioned comments because of the power wielded by the legislators.

At the Houston summit meeting of the Group Of Seven industrialized nations July 9 to 11, Prime Minister Toshiki Kaifu announced Japan would begin releasing the $5.4 billion in loans covering 1990 to 1995.

The package was frozen for about a year to protest Beijing's brutal suppression of a pro-democracy movement in June 1989.

But the other summit nations – the United States, Canada, Britain, France, West Germany, and Italy – declined to lift sanctions against China.

"Japan has just got the summit nations to agree to our loan resumption, but we're not much further along than that," said an official in the ministry's China section. "The resumption plan is under study, and it will take some time."

... by country

THE PHILIPPINES

The Philippines is considering options to ease foreign debt payments so that the money can be diverted to rebuilding the country, devastated by last week's earthquake, but President Corazon Aquino wants any action to be agreed upon in advance by creditors, a spokesman said Wednesday.

Any move should not be unilateral, a presidential spokesman, Adolfo Azcuna, told reporters. — **Reuters**

ENGLAND

The debt rating of London-based **Standard Chartered Bank** has been downgraded by the rating agency **Moody's Investors Service.**

Long-term deposits and senior debt were reduced from A1 to A2, and subordinated debt from A3 to Baa2. About $2 billion is affected. — **EMMA**

London-based Morgan Grenfell, the merchant bank unit of **Deutsche Bank,** is to set up a joint company with the New York firm of **Gleacher** & Co. to specialize in international mergers and acquisitions as well as corporate advice.

The arrangement will allow Morgan Grenfell to handle U.S. deals that were previously beyond its scope because of poor representation, the company said. — **EMMA**

JAPAN

First Wachovia Corp. announced Thursday that two of its primary banks, First National Bank of Atlanta and Wachovia Bank and Trust Co., have received authorization from Japan's Ministry of Finance to establish a representative office in Tokyo. The office is expected to open early in 1991.

John G. Medlin Jr., chief executive officer of First Wachovia, said the Tokyo office would assist First Wachovia customers doing business with Japan as well as Japanese companies investing in the United States.

"The growth of Japanese direct investment in the United States, particularly in the Southeast, and the trading activities of our domestic customers with Japan have provided First Wachovia attractive business, which will be enhanced by the new office," Mr. Medlin said.

U.S. Banks Retreat from Global Ambitions

Continued from *page* **1**

international bandwagon, now the reverse is true."

The latest casualty is Chase Manhattan Corp., one of the most ardent proponents of full-service global banking in the 1980s. The bank last month announced it was slashing operations overseas to reduce costs.

Chase did not provide details, but analysts predicted the cutbacks would fall heavily on Chase's corporate finance operations overseas, especially out of London, where profits have been slim over the past few years.

Regionals Are Challengers

The international downsizing of U.S. money-center banks is part of a broader restructuring aimed at focusing on their home markets, where many face a growing challenge from better-capitalized and more profitable regional banks.

BankAmerica Corp. and Wells Fargo & Co., for example, focus mainly on retail banking in California, while Chemical Banking Corp. has emphasized building its consumer business and and middle-market lending.

"With the steady march toward interstate banking, American banks have to look much more closely at their home market," said John Kriz, a securities analyst with Moody's Investors Service.

Commercial Operations Go

Most big U.S. banks began their overseas retreat in the mid-1980s, when they began selling or closing their overseas commercial operations.

Bankers Trust Co. and J.P. Morgan & Co. led the way, when they both eliminated their commercial lending operations in the early 1980s. The moves were followed to varying degrees by Chemical, BankAmerica, Manufacturers Hanover Trust Co., Wells Fargo, First Chicago Corp. and Continental Bank Corp.

The single exception to the trend is Citicorp, which continues to expand overseas.

Earnings a Problem

The overseas retreat is reflected in U.S. bank earnings.

Almost all major U.S. banks posted massive losses on their international operations last year. For Chase, the loss ran to $943 million; Manufacturers Hanover, $919 million; Chemical, $615 million; BankAmerica, $477 million; and Citicorp, $467 million.

Peter Rona, who will resign Aug. 3 as president of IBJ Schroder Bank and Trust Co. to set up his own consulting company, believes that capital shortages and inefficiencies in U.S. banking are constraining U.S. banks activities overseas and may ultimately reduce American banks to a relatively insignificant role abroad.

> **"U.S. financial firms, particularly banks, have not fared well in today's sophisticated global environment."**
>
> **Rep. John LaFalce**
> *Democrat of New York*

Unusual Situation

"It would be historically unprecedented for a large capital-importing nation to at the same time support a growing international banking industry," Mr. Rona said.

As U.S. banks reduced their commercial banking activities, many have chosen to concentrate on investment banking in the three major capital markets – New York, Tokyo, and London. But even that strategy has run into problems.

In London, Chase, Security Pacific Corp., and Citicorp have closed various market-making operations in government securities, equities, and Eurobonds. In Tokyo, Citicorp and Security Pacific have cut back operations in Japanese equities.

Misjudgment Noted

Although banks say they are only selectively eliminating their securities-related operations, the cutbacks show that many seriously misjudged the cost and complexities of launching a global investment network.

"There is an unmistakable – and disturbing – trend. U.S. financial firms, particularly banks, have not fared well in today's sophisticated global environment and are playing a diminished role in world markets," Congressman John La Falce, D-N.Y., told the Bankers Association convention.

"It is ironic that, as the market becomes more global, U.S. financial institutions are becoming more national in their orientation."

Mr. La Falce is chairman of the House task force on the international competitiveness of U.S. financial institutions.

"While there will be some dislocations short-term, long-term I believe the current restructuring of American banking will result in a better-organized and more profitable industry in the U.S.," said Moody's Mr. Kriz.

John Evans in London contributed to this article.

Reed Warns of World Capital Crunch

MEXICO CITY – Radical political and economic reforms in Eastern Europe are likely to cause a global shortage of the investment capital needed to satisfy growing demands for prosperity and development, said Citicorp's chairman and chief executive officer, John S. Reed.

The fall of the Berlin Wall and the remaking of Europe and the Soviet Union have added 425 million people to the millions in the developing world already competing for a higher standard of living, Mr. Reed said this week at a luncheon meeting of the American Chamber of Commerce.

"You need $40 trillion of capital to support the desires of those people," he said. "It certainly says to you that we are going to be capital short."

Mr. Reed said the rise of democratic governments in Latin America has led Washington to consider closer trade and investment ties. He cited a proposed free-trade agreement between the United States and Mexico.

Mr. Reed, who led the committee that negotiated a key debt-reduction accord with Mexico last year, dismissed its $93 billion debt as "not an issue." But he predicted that investors who took their capital abroad during the 1980s debt crisis will not bring it back to Mexico soon. — **Reuters**

Stormy Forecast

U.S. Banks Are Struggling To Find a Role in Japan

By JOHN EVANS

TOKYO — In the land of the rising sun, U.S. banks are encountering some stormy weather.

The reasons aren't hard to find. Hamstrung partly by regulatory constraints at home, U.S. banks here often are pitted against Japanese institutions many times their size.

The high cost of living and stratospheric real estate values in land-hungry Japan keep relentless upward pressure on overhead. Foreigners say the Japanese have been reticent to open their markets.

And over the last several years, U.S. banks also have had to face a special disadvantage: the historic decline of the dollar against the yen.

Putting Strategy First

With strategic considerations paramount, some banks likely will keep paddling to remain afloat in a sea of red ink. But many less able to ignore the bottom line are bailing out, seeking refuge in niches – such as securities dealing and investment management – or curtailing operations and slicing costs to the bone.

Of course, cutting costs only goes so far. The Japanese branches of six leading U.S. banks posted net losses in fiscal 1989, including BankAmerica, First Interstate and ContinentalBank Corp. And at least for the foreseeable future, the pickings in Japan likely will remain painfully thin.

"Out of 82 foreign banks here, no more than 10 will prove successful," said Michael Connors, managing director of Barclays Bank PLC in Tokyo.

Another measure of how tough it is to make money in Japan is the earnings data on the foreign institutions operating here. Despite combined assets of $140 billion, the 82 foreign banks here earned a miserly $1.34 million apiece last year – down from an average of $2.2 million in 1988, according to calculations by KPMG Peat Marwick, the international accounting firm.

Citing one reason for the sagging performance, BankAmerica Corp.'s senior vice president in Japan, Robert Johnson, calculates that between 1985 and 1989, the cost base of American banks here doubled because of the yen's big surge against the greenback. In 1985, the yen traded at about 238 to the dollar. Now, the exchange rate is about 150 to the dollar.

Problem of Access

Foreign bankers also grouse about limited access to the Japanese marketplace. Indeed, U.S. banks control less than 1% of banking assets in Japan, while the Japanese have a 15% share of

Slowing Asset Growth

Japanese Banks Alter U.S. Plans

By SAM ZUCKERMAN

SAN FRANCISCO — Japanese banks hit the United States like a tsunami in the 1980s. But this year, with the Japanese pounded by economic problems at home, the tidal wave is losing force.

"They are reassessing their strategy," said Donald W. Magnusen, executive vice president and capital markets group manager for Portland, Ore.-based U.S. Bancorp. "They seem to be less aggressive in their pricing and less aggressive in their asset building."

The current slowdown is probably no more than a trough until the next swell washes through, bankers and analysts said. In short, the Japanese are here to stay.

But at least in the near-term, they said, Japanese banks will emphasize higher-yielding assets and fee income rather than simply an increase in size.

"We're not very anxious to increase assets. Earnings from nonasset-related businesses are growing faster," said one Japanese banker, citing real estate investments, corporate acquisitions, project finance and trade finance as among the businesses his bank is targeting.

Startling Growth

Even as they slow their asset growth, however, the Japanese are building for the future. According to an internal memo of the Ministry of Finance – a copy of which was obtained by American Banker – 15 Japanese banks are planning to open or upgrade 27 offices in 13 cities across the United States.

Said Anthony Walton, general manager of stateside operations for Australia's Westpac Banking Corp.: "The Japanese have pinpointed the U.S. as an absolute key target market. They are going to be a dominating force in the year 2000."

Among the 15 banks planning to expand their assets here, the memo said, Mitsubishi BankLtd. – the world's fourth

largest with $360 billion in assets – has the most ambitious plans. Mitsubishi reportedly is planning to open loan production offices in Atlanta, Philadelphia, Boston, Minneapolis, Detroit, Dallas and St. Louis.

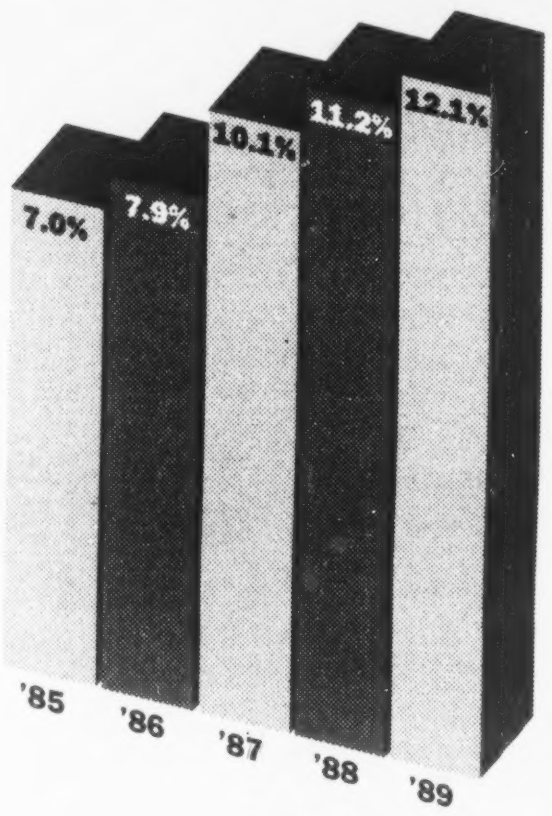
Japanese banking sources said the expansion was intended to broaden the banks' relationship with medium-size businesses in the United States and Japanese subsidiaries around the country. Japanese banks also want a network they can use to do business nationwide as barriers to interstate banking fall.

From 1982 to 1989 Japanese bank assets in this country more than quadrupled to $421 billion – more than 12% of total U.S. banking assets – according to Federal Reserve data. The growth rate exceeded 19% a year.

During the decade, the 15 or so major Japanese city banks were joined by more than 30 regional banks and trust companies.

Market Share Rising

Japanese banks' share of total banking assets in the United States



Source: American Banker

By 1989, 41 Japanese banks – from leviathan Dai-Ichi Kangyo Bank Ltd., the world's largest, to the relatively small Tokyo Tomin Bank Ltd. – were operating a total of 198 branches, agencies, subsidiaries, representative offices, and other offices in 14 states and the District of Columbia.

But this year, rising interest rates, a soft yen, volatile stock market conditions at home, and rocky banking conditions here have caused some Japanese banks to downshift – at least temporarily. Thus, while in the fiscal year ended June 1990 the banks will show continued strong expansion as a result of major acquisitions late last year, experts predict Japanese bank-asset growth in the United States could slow to the low single digits in fiscal 1991, the lowest in years.

"Some bank headquarters are thinking seriously about decreasing total assets" in this country, said Juichi Tsuda, who manages the Los Angeles agency of Industrial Bank of Japan (IBJ).

Said a branch manager of a major Japanese bank: "Headquarters is very nervous. They have told branch managers to be prepared to sell assets."

American banks, saddled with poor earnings and portfolios filled with problem loans, are in no position to take advantage of the Japanese retrenchment by aggressively adding assets.

"There is an opportunity, but it's an opportunity that very few [banks] will have the potential to realize," said S. Waite Rawls, vice chairman and international capital markets chief for Chicago-based Continental Bank Corp.

Barrage of Blows

Japanese banks are readjusting in reaction to a series of blows that has hit them just as beefed up capital adequacy regulations of the Bank for International Settlements are being phased in. The BIS' total capital standard of 8% becomes mandatory early in 1993.

Banks in Japan have historically been less profitable than their U.S. or European counterparts, with returns on assets typically under 0.4%. They compensated with high leverage ratios and tremendous capitalization on the Japanese stock market, where price/earnings multiples of 40 or 50 were common.

Now some of those props have disappeared.

A Sea of Problems

The main problems Japanese banks face include:

- Skyrocketing domestic interest rates. Late last year the central bank, the Bank of Japan, fearful of inflation, forced short-term interest rates above 7% – higher than they'd been in years. Though banks had to pay more for funds, interest rates charged to customers moved up more slowly, creating "extreme pressure on margins," said Thomas E. Gove, an analyst with Thomson Bankwatch Inc., owned by the company that publishes American Banker.
- Weakness in the stock market. In the five months that ended in April, the Nikkei average, the Tokyo stock market's main index, plunged nearly 30%. Though prices have partly recovered, banks – among the biggest institutional shareholders – were badly shaken. "We're very nervous about the stock market," said a Japanese banker in California.

Much of the value of Japanese banks' "hidden assets" – unrealized gains on their stock – was wiped out. Under BIS regulations, 45% of those gains count as capital, so the market plunge eliminated large chunks of capital.

Meanwhile, analysts said the recovery in share prices in Tokyo over the last few months had bolstered Japanese banks' capital ratios.

In fact, said Thomas Hanley, banking analyst at New York-based Salomon Brothers Inc., 11 of Japan's 15 biggest banks have already met or surpassed the minimum 8% BIS ratio.

- Falling yen. For the first time in years, the Japanese have had to deal with a weak currency. The yen has dropped about 15% against the dollar in the past year. That has raised the value of dollar-denominated international assets and lowered that of yen-denominated capital, eroding capital-to-asset ratios.

These factors – combined with the possibility that Japan's inflated real estate prices may be due for a correction – are putting tremendous pressure on Japanese banks to raise more money. But under current conditions, it's tough to sell stock.

Japanese banks "have been able to raise very little," said David D. Hale, chief economist at Kemper Financial Services Inc. The Japanese government recently announced a plan to let banks sell subordinated notes, but capital raised this way will cost much more than equity.

Thinking the Unthinkable

Short of capital and with no easy way to build it, some Japanese banks find themselves operating for the first time with an asset growth limit.

"Some Japanese banks are intentionally reducing assets worldwide, especially in international business," said Keizo Yoshida, president and chief executive of Sumitomo Bankof California.

"Within the past year, the major change [for Sumitomo Bank's branches and agencies in the United States] is a limit on the increase of the loan portfolio," Mr. Yoshida said. "Ten percent would be the ceiling. In the past, we increased much more."

Problems in the home market, of course, are not the only ones Japanese banks have confronted. In the past year, market conditions in the U.S. have deteriorated, especially in commercial real estate and leveraged transactions where the Japanese have big stakes.

Like their U.S. counterparts, the Japanese are setting tougher standards for real estate and leveraged transaction loans, and rejecting deals they previously would have jumped at.

"They are reacting to the same problems we're reacting to," said U.S. Bancorp's Mr. Magnusen.

Credit quality problems are increasing at precisely the time when the Japanese are putting more stress on profitability and higher margins.

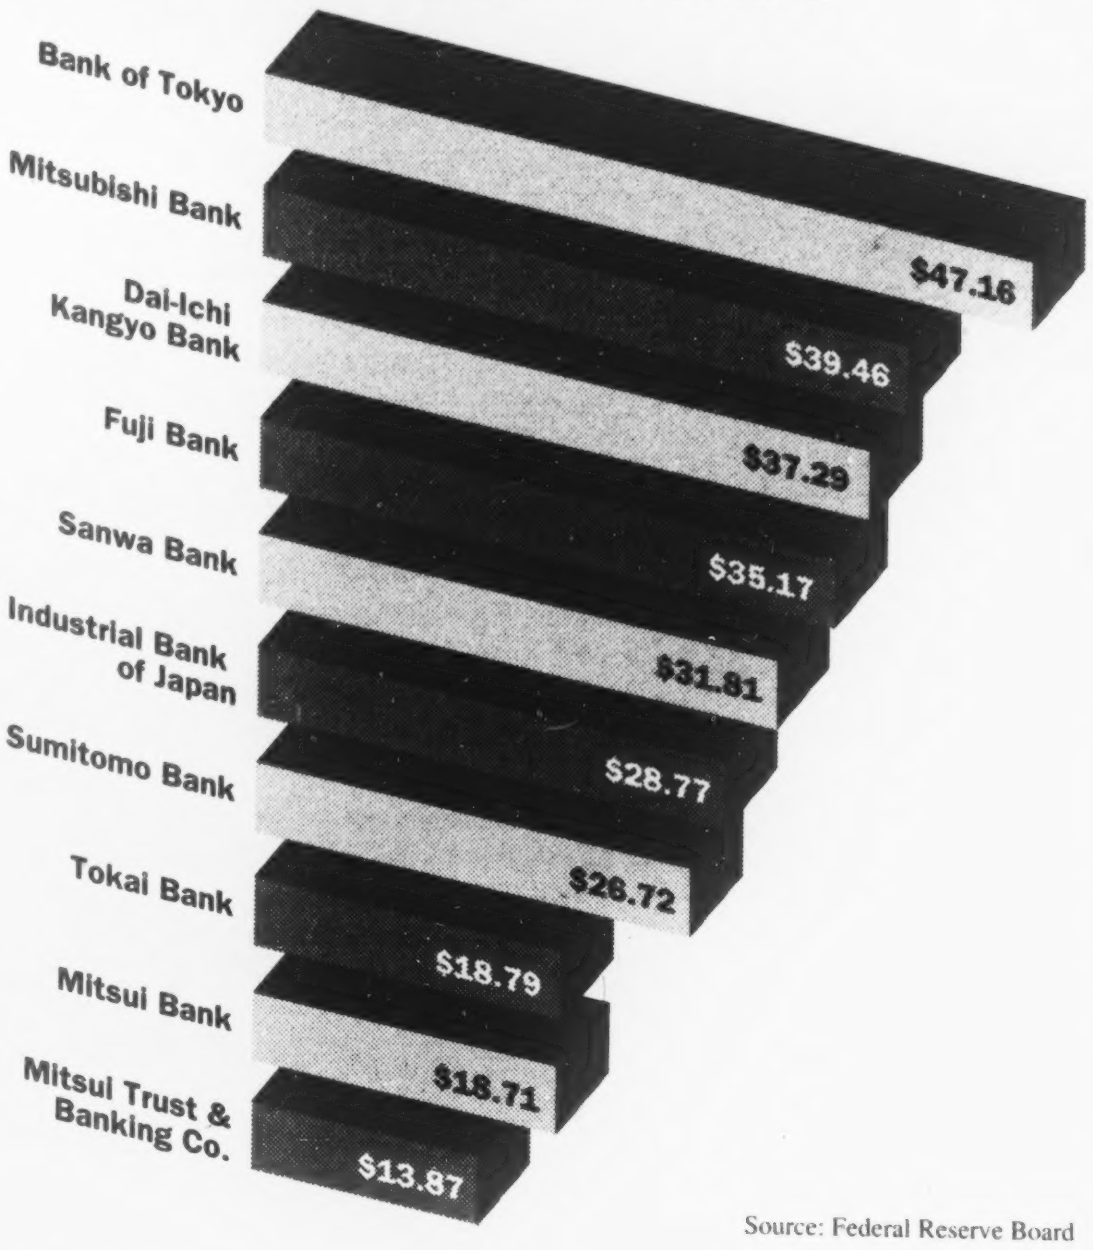
Bankers' Dilemma

Today, Japanese bankers in this country find are torn between desire for the kinds of profits to be had in highly leveraged transactions and the real estate markets and their concern for credit quality. For most of them, there is no easy way out.

"After leveraged buyouts, they have been trying very hard to find a new way to go," said Sumitomo Bank's Mr. Yoshida. "I don't believe they have found it."

Japanese Banks in the United States

Ten largest ranked by total assets, in billions of dollars



Source: Federal Reserve Board

Campeau Shock

The collapse of Robert Campeau's Federated Department Stores buyout was a watershed event for the Japanese. The credits were widely syndicated among city bank and second tier institutions, and buyers were said to be shocked to find themselves holding the bag.

Since then, the Japanese have become "more selective in participating in syndications," said Haruo Moto, a strategic planner at Union Bank, San Francisco, which is 77% owned by Bank of Tokyo.

In the recent $775 million buyout of Saks & Co. by Investcorp., the only Japanese institutions to participate were Bank of Tokyo and Sumitomo Trust & Banking Co. Ltd. Bank of Tokyo bought a $30 million stake and Sumitomo a $25 million, according to sources familiar with the deal.

Caution on Real Estate

The Japanese are not abandoning real estate lending. "We are accustomed to this market. We have expertise," said one Japanese banker.

Nevertheless, pressure from regulators and overbuilding in some markets have forced them, like their U.S. counterparts, to proceed with extra caution. Underwriting is more rigorous. And preference is going to safer credits, such as refinancings of standing properties, over riskier construction loans.

For some Japanese institutions, lending to midsize and smaller U.S. companies has become a more important priority.

Smaller Borrowers Targeted

Bank of Tokyo, Mitsubishi Bank, and Sanwa Bank Ltd., which own commercial banks in California, have traveled farthest down this road. Dai-Ichi Kangyo and Fuji Bank Ltd. bought major U.S. leasing companies as a way to enter the middle market. Those without large subsidiaries or leasing units remain far behind.

All in all, it's an anxious time for Japanese bankers in the United States, though their underlying strength is little diminished.

"Every branch manager has headaches or stomach aches," said a Japanese banker in California. "Banking is much harder now." □

Cracking Japan

Continued from *page* **1A**

American assets.

In recent years, Washington has stepped up pressure on the Japanese to open their markets more quickly. And under an agreement in late June designed to whittle down its trade surplus with the United States, Japan has agreed to a range of reforms, including one that spurs consumer spending by making it easier to borrow on bank credit cards beginning in 1992.

Even so, the pace of reform likely will continue to be slowed by *keiretsu*, a Japanese business practice under which domestic corporations and banks tacitly agree to work closely together.

Persistence Likely

Despite these obstacles, strategic commitments and the marquee value of having a base in Japan will compel some U.S. banks to keep on plugging.

BankAmerica's Mr. Johnson notes that although brutal competition has crimped profitability in Japan, the country represents the second largest source of business in the institution's worldwide network after its home base.

"We have a good branch network in Asia," he says. "AsiaPacific is an advantage we have to play."

Other bankers say conditions in Japan dictate tight control of costs and a razor-sharp strategic focus.

Staff Has Been Slashed

Timothy McGinnis, senior vice president and general manager for Chase Manhattan Bank in Japan and Asia, said Chase has been engaged in an 18-month program to reduce costs – a move that has sliced staff from a high of 650 to a current 545.

Chase and other American giants such as Citibank have an advantage over their foreign competitors: They first gained a beachhead in Japan in the period following World War II as military banks for the occupying U.S. forces. That activity proved a solid base for expansion.

Mr. McGinnis points to his bank's role as the major clearing bank for all U.S. dollar transactions generated in Japan. Chase handles 97% of all such clearances in the greenback for both Japanese and foreign banks and has retained leadership in the arena by spending on advanced automation systems for currency settlements.

A Steady Business

"Chase almost acts as a Federal Reserve Bank in Tokyo through our dollar clearing," Mr. McGinnis said. "This type of business is a solid annuity. It provides steady income streams."

To survive in Tokyo, "you have to have strong niches like this," he said.

Another bank with a tight focus is Citicorp's Citibank, the only foreigner attempting to break into Japanese consumer banking. After a four-year battle, Citibank recently won the right to share in the teller-machine network of Japan's 12 money-center banks.

This will give Citibank, which operates nine branches in Japan, access to more than 20,000 cash dispensers throughout the nation beginning in December. Industry watchers say the move is crucial to Citibank's expansion plans.

Changes by Others

Meanwhile, other U.S. banks have significantly realigned their activities in Japan.

Wells Fargo sold its Tokyo branch last year and concluded a business venture with Nikko Securities Ltd., one of Japan's Big Four brokerage houses. In April, the concerns formed Wells Fargo Nikko Investment Advisers to handle the vast investment flows between the U.S. and Japan.

Separately, the San Francisco bank entered an arrangement with Asian megabank Hongkong and Shanghai Banking Corp. Plans call for Hongkong Bank to service Wells Fargo clients through its 1,500-branch network.

Continental, in shedding most of its staff in Japan, is looking toward specialized services. Says Timothy Wood, the bank's general manager in Tokyo: "We have made the decision to discard high-volume, low-value-added services." □

1989
Highlights of the year

The ordinary and extraordinary shareholders' meetings of Banca Popolare di Milano, were held on 28th April 1990 and chaired by Prof. Avv. Piero Schlesinger (1,476 shareholders were present). During the extraordinary meeting, a number of changes to the Bank's Statutes were approved. Its Report and Accounts for the year ended 31st December 1989 (the 124th since the Bank's establishment) were approved by an overwhelming majority during the ordinary meeting.

As far as banking services are concerned, the positive results for the year show:

Customer deposits	ITL 12,040.1 billion	+17.6%
Total deposits (including banks)	ITL 20,425.2 billion	+20.4%
Funds administered (total deposits & securities held for banks and customers)	ITL 35,598.3 billion	+18.4%
Loans and advances	ITL 8,084.5 billion	+12.4%

During 1989, the notable increase in the Bank's operations continued in parallel with a widespread expansion to the territory it serves which resulted from the consolidation of Banca Popolare di Apricena (with 25 branches, mostly in Puglia). This expansion followed a similar merger with Banca Popolare di Bologna e Ferrara which took place in 1988.

The Bank also strengthened its international presence with the opening of the London Branch, situated in the heart of the City of London, and with the relocation of the New York Branch to new and more prestigious offices.

The first part of an increase to the share capital of the Bank was conducted very satisfactorily, producing an inflow of ITL 134 billion. To this amount, must be added ITL 66 billion resulting from the conversion into shares of warrants issued in 1989.

As a result of the increase in share capital and the allocation to reserves approved during the shareholders' meeting, Banca Popolare di Milano's net worth increased to ITL 1,247.5 billion (+20.5%).

A rise in income coupled with profits derived from the sale of minority participations (in particular the sale of the Bank's shareholding in Nuovo Banco Ambrosiano), produced an increase in the Bank's internal cashflow.

In fact, after having provided for extraordinary losses realised during the year (of which ITL 90.9 billion related to Bipiemme Leasing), a profit before tax of ITL 283.5 billion was recorded. After the deduction of taxes, a 32.1% jump in net profit to ITL 168 billion was achieved.

The shareholders' meeting, while retaining ITL 77 billion for the Bank's reserves, also approved the distribution of ITL 66.5 billion from profits to pay a dividend of ITL 460 per share to the 144.6 million shares in issue (as against the ITL 525 distributed to each of the issued 104.3 million shares in the previous year).

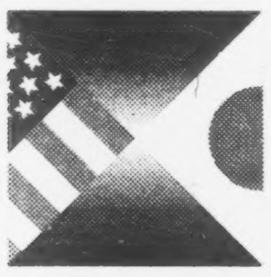
Cultures Clash on Pay

BY BRYAN DUNN
Special to the American Banker

Pay for performance is not an expression heard around many Japanese banks – even today. In fact, if there is a message, it is "pay for loyalty," with a little "pay what you have to" thrown in.

This flies in the face of every tenet of effective Western compensation philosophy. Yet the Japanese banks have been able to attract and retain legions of American employees.

The top fifteen Japanese banks (excluding subsidiaries) in the United States employ 9,000 people, the vast majority of whom are American. However, it's only been in the past few years that more than a handful of those Americans played any significant management role.



In fact, many would argue that even in what are ostensibly management jobs they have limited control over such key decisions as hiring, firing, and compensation.

Japanese banks, unlike most other foreign banks in the United States, have their nationals filling all significant management roles.

Even when there are Americans in key positions, they rely heavily on their Japanese "shadows" to get decisions made – in Japan, at the other end of a fax machine.

A Different Tradition

Pay decisions, like others, are based on comfortable, familiar Japanese tradition. That includes heavy reliance base salary determined by tenure; large semiannual bonuses paid to all employees as the same percentage of salary, and vague discussions about pay and performance.

Still uncomfortable and unfamiliar to Japanese managers are:

- Pay distinctions based on performance.
- The concept that different jobs at the same organizational level have different value.
- The idea that incentives (long- or short-term) have a role in changing behavior.
- Candid performance and pay discussions with employees.

Harmony Is Goal

The Japanese strive for harmony, uniformity, and consistency. Pay programs that differentiate among employees are anathema to Japanese managers.

In considering Japanese compensation policies, it is safe to ignore the legendary salaries paid to a select few with unique technical specialties who were "bought" at what the market would bear in the 1980s – when the market would bear a lot.

In fact, the Japanese have been accused of being niggardly in their pay practices.

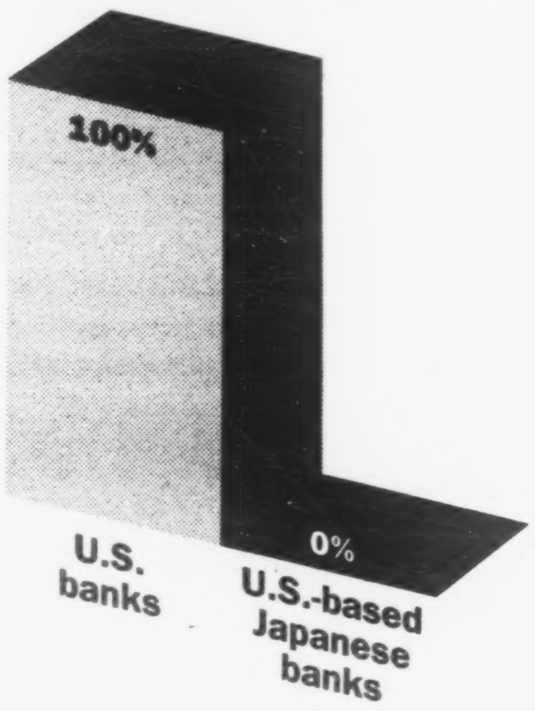
They have also tended to create broad classes of employee – administration, operations, banking – and to limit differentials within or across those classes except for tenure and experience. While Americans and Europeans have spent millions of dollars developing sophisticated job evaluation systems, the Japanese have relied on a simple program that avoids distinctions rather than promoting them.

Western Procedure

Most U.S. and many European banks devote considerable attention to the process by which salaries are adjusted each year.

- First, performance appraisals are prepared and reviewed with each employee.
- Then, managers put forward salary increase recommendations on the basis of a merit-increase grid that considers performance and employees' level in their salary grade (strong performers who are low in their grade get the largest increases).

Pay for Performance
Current use of long-term incentives



Source: Towers Perrin Group Survey

- These proposals are reviewed for internal consistency and equity – to ensure that the best performers get the biggest raise.
- Finally, managers tell each employee what raise has been approved.

Japanese Pay Adjustments

The Japanese are not comfortable with such individual performance reviews, often have no formally graded salary structure, and do not easily make pay distinctions based on performance. For them, the process of adjusting pay is much more like a union cost-of-living increase. Truly performance-based incentive systems are a rarity in Japanese banks.

However, as astute business people, the Japanese recognize that sometimes they have to do as the "natives" do. For example, U.S. subsidiaries of Japanese banks provide essentially American-style incentive compensation for employees who work in such areas as foreign exchange trading and investment banking. But even in these areas, a recent survey showed, the bonus portion of compensation is significantly less than in American banks.

This all relates to the fact that the Japanese find it hard to understand that someone could or would work harder or smarter simply for more money. In the Japanese view, people naturally work their best, because that is their obligation or out of a sense of honor or gratitude – but never just for more money. The implication that someone would work better to obtain a reward is considered an insult.

Long-term Incentives

Also, the use of long-term incentives is philosophically "foreign" to Japanese managers. Stock options and other forms of long-term incentives common in the United States simply do not exist in Japan.

Nor do they among Japanese banks in the United States. A recent survey by TPF&C, a Towers Perrin company, of long-term incentive practices by the U.S. subsidiaries of foreign institutions showed that none of the Japanese banks had such devices.

BRYAN DUNN *says Japan's banks resist Western pay practices.*

Thirty-five percent of the other foreign banks did – as do all the top 25 U.S. banks.

Change Is Slow

In the past few years, a number of the big Japanese banks have hired accomplished Americans to serve as the chief human resources officers. They have been mandated to Americanize the banks, starting with compensation.

The changes have begun. In the past year, a number of incentive bonus programs have been instituted, job evaluation programs have been studied, and the performance appraisal element of the merit review process has been tried.

But progress has been slow and frustrating. It will probably continue to be so as long as the Japanese banks fill most management positions with expatriates and rotate them home. □

Mr. Dunn, a principal of the management consulting and actuarial firm Towers Perrin, manages its international compensation consulting practice. Many of his clients are Japanese banks.

Saitama Bank.
A sound banking system matched to new banking needs.

Trade financing? Syndicated loans? International securities? In these and other areas of international banking Saitama Bank has established its capability and credibility worldwide. For over 40 years we've built our solid base and sound banking system in the Tokyo metropolitan area, Japan's vigorous economic center.

Saitama Bank is fast-growing and forward-looking: Change-oriented. Positive. And assertive — as seen in our electronic banking technology. Grow together with Saitama Bank — sound, experienced and flexible in matching its services to new banking needs.

The Japanese bank that helps you grow

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total deposits** are funds due depositors, banks (including central banks), and national, state, and local governments. **Note:** Banks that did not provide current data are **excluded** from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990; Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(†)**— Rank based on revised asset total for 1988. **(‡)**— Restated to reflect changes in consolidation in 1989. **(•)**— The "due to banks" portion of total deposits was estimated by American Banker.

Compiled by American Banker, Copyright 1990.

Source: The primary source of data is **American Banker's** question- e to the 1,200 largest banks in the world. Data were checked against al reports whenever possible. Consolidated data, if available, are used ll banks that own over 50% of other banks. The consolidation includes those affiliates in which ownership exceeds 50%. **Total deposits** are s due depositors, banks (including central banks), and national, state, local governments. **Note:** Banks that did not provide current data are **uded** from the listing. **Date of figures:** Data for most banks are for Dec. 989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990; Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)—** A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)—** A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)—** Consolidated data. **(t)—** Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)—** Data are not consolidated for affiliates more than 50% owned. **(v)—** Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(†)—** Rank based on revised asset total for 1988. **(‡)—** Restated to reflect changes in consolidation in 1989. **([1])—** On Dec. 31, 1989, Banca Catolica Veneto merged with Nuevo Banco Ambrosiano, Milan to form Banca Ambrosiano Veneto, Milan. The data for Dec. 31, 1988, are for the for the former Nuevo Banco Ambrosiano.

Compiled by American Banker, Copyright 1990.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total deposits** are funds due depositors, banks (including central banks), and national, state, and local governments. **Note:** Banks that did not provide current data are **excluded** from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990; Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(†)**— Rank based on revised asset total for 1988. **(‡)**— Restated to reflect changes in consolidation in 1989.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total deposits** are funds due depositors, banks (including central banks), and national, state, and local governments. **Note:** Banks that did not provide current data are **excluded** from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990; Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(†)**— Rank based on revised asset total for 1988. **(‡)**— Restated to reflect changes in consolidation in 1989. **(1)**— Excludes $5.6 billion in "loans from third parties" which bank classified as time deposits.

Compiled by American Banker, Copyright 1990.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,200 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Total deposits** are funds due depositors, banks (including central banks), and national, state, and local governments. **Note:** Banks that did not provide current data are **excluded** from the listing. **Date of figures:** Data for most banks are for Dec. 31, 1989 and Dec. 31, 1988. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1989, Sept. 30, 1989, and March 31, 1990; Canadian bank data are for fiscal yearend Oct. 31, 1989; and all Japanese bank data are for fiscal yearend March 31, 1990. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures o parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidat ed for affiliates more than 50% owned. **(v)**— Bank is owned by another bank which does not consolidate subsidiary banks in its data. **(†)**— Rank base on revised asset total for 1988. **(‡)**— Restated to reflect changes in consoli dation in 1989.

Addendum to Tabulation

Data for some banks were received after American Banker's July 12th deadline for inclusion in today's listing. These banks appear below with the 1989 ranks they would have had if all the data were received earlier. (Dollar Amounts in Millions)

Deposit Rank 12/89	Name of Bank	Deposits 12/31/89	Deposits 12/31/88	Deposit Rank 12/88
108	State Bank of India, Bombay[1]	32,889	31,099	102
187	Cassa di Risparmio di Torino, Italy[2]	15,407	13,455	206
219	Credit du Nord, Paris, France[3]	13,070	13,685	202
573	Bank Rakyat Indonesia, Jakarta	3,987	2,948	718
857	Hessische Landesbank Int'l, Luxembourg	2,273	1,901	942

(1)— Data are for the fiscal yearend March 31, 1990. (2)— Data were received too late for this bank to be placed on the Asset Rank Addendum list published yesterday. Its assets were $20,411 million at yearend 1989. It would have ranked 193d. In 1988, the bank had $16,671 million in assets and ranked 204th. (3)— A subsidiary of Compagnie Financiere de Paribas, Paris.

Lenders Seeking Payment If Loan Becomes HLT

By STEVEN LIPIN

The $1 billion in bank financing lined up for Kansas Gas and Electric Co.'s bid for Kansas City Power & Light Co. was significant for the banking community because it was the first hostile takeover financed by banks in many months, and, at the same time, avoided the tag of highly leveraged transaction.

But the bank facility – led by First Chicago Corp. and Westpac Banking Corp. – is important for another reason: It is the largest loan to date that has included language protecting lenders if the loans are ever classified as HLTs.

ANALYSIS: *Follow-up on the news*

Even as leveraged lending picks up from its lows, a growing number of lenders are including the protective "event risk" language that ensures banks some form of compensation if the loans slip into the classification.

"We're trying to make it a standard clause," said one money-center banker. "It doesn't make a difference who the borrower is."

Standard Language on the Way

No less than seven new loans have included the language, and bankers said many new non-HLT loans will include the provisions. Eventually, bankers said, it could be standard operating language for deals that at the margin are not HLTs but could fall into that category.

"Lenders are calling the shots to a much greater degree," said Dennis Amato, senior vice president at Continental Bank. "The concern is if a loan becomes an HLT, that banks get paid for it."

Limited Capital for HLTs

Bankers note that regulatory and shareholder pressure has limited the amount of capital devoted to HLTs. But if loans are reclassified either because of additional leveraging or because regulators deem the loans HLTs after origination, banks want to be rewarded for the increased risk.

"It's a typical market response to a new regulatory constraint," said Christopher L. Snyder, president of Loan Pricing Corp.

While no boilerplate language has been developed for the new loans, a number of common themes have emerged:

- Step-up pricing. The interest rates on the Kansas Gas loans increase 50 basis points if the loan becomes an HLT. In a $300 million loan for Mark IV Industries by Continental Bank and

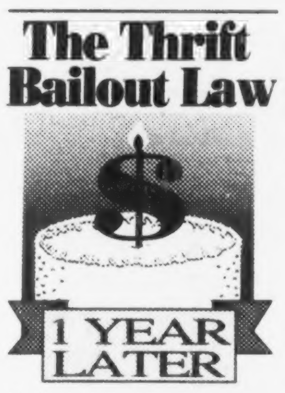
BIRTH OF A BAILOUT: Banking, politics, and the economy felt the aftereffects of the law President Bush signed last August.

Despite Flaws, Slow Start, Bailout Is Picking Up Steam

By ROBERT M. GARSSON
First of a Series

WASHINGTON — When President Bush walked into the Rose Garden on a sun-filled day last Aug. 9, the world seemed bright with promise. He was about to sign a landmark savings and loan bill that not only would make huge sums of money available for the costly cleanup, but would also bring authentic reform to an industry long accustomed to lax supervision and phony accounting.



That heady moment proved short-lived, however, as the Bush administration hit the ground crawling in the days that followed. The first eight months of the bailout were characterized by bureaucratic infighting and little action in dealing with the hundreds of insolvent institutions that dotted the financial landscape.

Size of Problem Unanticipated

Today, as the Financial Institutions Reform, Recovery, and Enforcement Act nears its anniversary, the bailout appears to have been overtaken by cash shortages, political bickering, and a growing realization that the thrift problem was much deeper than anyone ever imagined.

Yet for all the law's apparent flaws, many observers believe that its reform elements are working exactly as intended and that the cleanup, despite its

Visa Is Firing New Volley At American Express Card

By YVETTE D. KANTROW

NEW YORK – Having spent millions to persuade consumers to choose its card, Visa U.S.A. is opening another front in its war with American Express Co.

On Wednesday, Visa will begin a mass-market campaign attacking the rates that merchants pay for what it sarcastically calls the "privilege" of accepting American Express cards.

If a merchant's customers are paying with American Express cards, the ad states, "call 800-Visa-511, and we'll show you how to turn a bigger profit."

Wheel of Comparison

Respondents will receive a Visa "profit-improvement calculator," which is a cardboard wheel they can use to compare what they spend on American Express transactions with what they spend on Visa transactions.

"We want to remind merchants that they pay more for American Express, and hopefully they will show a preference for Visa," a spokesman for the bank card association said. The ad is scheduled to run in *The Wall Street Journal, Business Week, Time, Forbes,* and other business and trade publications.

To accept credit cards, merchants typically pay their banks or other service providers fees, known as discounts. These discounts are a perecentage of each credit card sale and vary by the retailer's industry and sales

Avantor, We Hardly Knew Ya

By KENNETH CLINE

ATLANTA — Last fall, when Citizens and Southern Corp. and Sovran Financial Corp. announced plans to merge, they proudly revealed the name for the joint company: Avantor Financial Corp.

The doubts started to set in during the ensuing months, as the companies' top executives got an earful of snickers and criticism from employees, customers, journalists, and investors.

"Nobody told us that Avantor is a wonderful name," said Dennis C. Bottorff, president and chief operating officer of Sovran, which is based in Norfolk, Va.

During a meeting with analysts this year in Atlanta,

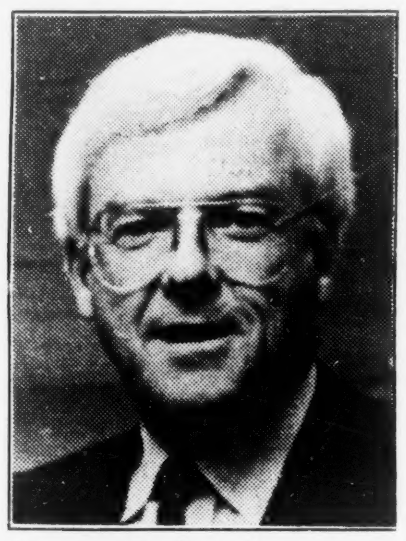
James C. Grant Engineers PC Network for Royal Bank

By JEANNE IIDA

James C. Grant, chief technologist at Royal Bank of Canada, is a hard-driving engineer who has encouraged the development of what he calls hybrid bankers – technologists who are also businessmen.

His vision has helped make the Canadian bank one of the top business performers in North America.

With the largest branch network in North America, Royal Bank is now engaged in an ambitious project that is rivaled in scope only by those of one or two U.S. banks. It plans to install 15,000 personal computers in its 1,560 branches by year-end and redesign those branches to create a sales-oriented environment.



James C. Grant

Mr. Grant is well-suited for the mission. He spent spent four and a half years heading retail operations of the bank before becoming senior vice president of operations in October 1984 and executive vice president of systems and technology in February 1987.

A winner in 1989 of the prestigious information management award from Carnegie Mellon University, Mr. Grant is a hands-on manager who draws innovative ideas from his staff, then pushes hard for those ideas with top management.

"He doesn't just sit in a mahogany office," said Kenneth Morrison, vice president of technology and distribution in corporate banking at the Royal Bank, which is based in Toronto.

"He's a gentleman demanding respect," said Frank Lablans, vice president of retirement income services at Royal Bank. At the same time, "he's aggressive, he likes new directions and new things – he's a go-getter."

Several years ago, Mr. Grant designed a weeklong course on the benefits of technology that all of the banks' top 200 employees, including the chairman, attended.

The cross-fertilization of technology and traditional banking talent has led to some changes at the bank. Many of its top executives in retail banking, corporate banking, and credit card services are now systems people who requested transfers.

When he headed the retail unit, Mr. Grant positioned the area for its rapid growth of the past few years through a shrewd use of technology and keen sense of the banking and investment habits of consumers.

Sophisticated Systems that U.S. Banks Lack

Royal Bank's share of the Canadian retail market has grown over the past four years to 25.5% from 23.75%. The bank offers network services such as electronic data interchange to large corporate customers and has had integrated customer profile information for years. Most U.S. banks are just beginning to build such systems.

"Jim's been a key player in the bank's success," said Mr. Lablans.

When asked about his private life, Mr. Grant jokes, "What private life?" but concedes he is an avid squash player who makes time for three to five games a week.

Born in Nova Scotia, Mr. Grant has an electrical engineering degree from St. Francis Xavier College there. For five years he worked as an air traffic controller, "keeping planes from bumping into each other over the North Atlantic." ☐

NEWS *briefs*

First Union's Florida Chief To Oversee Credit Policy

JACKSONVILLE, Fla. — Billy J. Walker, chairman and chief executive officer of First Union National Bank of Florida, said he is taking on additional responsibility as chairman of the credit policy committee. He said the move reflects a growing commitment to commercial lending following the company's acquisition by First Union Corp. of Charlotte, N.C.

Mr. Walker, who is also a vice chairman of the $38 billion-asset parent, is preparing to step down as Florida CEO next March.

Pacific First of Seattle To Sell Utah Branches

TORONTO — Royal Trustco said its subsidiary, Pacific First Financial Corp. of Seattle, will sell its 17 Utah branches to First Security Corp. of Salt Lake City, Utah, for $3.25 million. The sale is subject to regulatory approval.

Pacific First acquired the Utah operations in June when it acquired American Savings and Loan of Oregon. But Royal Trustco President Michael Cornellissen said that Utah was "not in line with our strategy to focus on the West Coast."

Through Pacific First, Royal Trust operates 163 branches in four states.

Synovus to Buy Fairbanco

COLUMBUS, Ga. — Synovus Financial Corp. signed a letter of intent to acquire Fairbanco Holding Co. Inc., parent of the $68 million-asset Fairburn (Ga.) Banking Co. Terms were not disclosed.

The $2.7 billion-asset Synovus owns 14 banks in three Southeastern states. ☐

FDIC to Appeal Texas Decision

Seeks to Vindicate Handling of 12 Bank Closings

By BILL ATKINSON

WASHINGTON — The Federal Deposit Insurance Corp. will appeal a recent court ruling that the agency overstepped its authority in declaring 12 subsidiaries of Texas American Bancshares insolvent, a senior FDIC legal official said.

The agency is trying to recover from a stunning defeat in June when U.S. District Judge Barefoot Sanders awarded Fort Worth-based Texas American $5 million in damages.

Illegal Seizure Is Claimed

Texas American sued the FDIC about a year ago, shortly after its 24 subsidiary banks were declared insolvent. Robert G. Clark, the FDIC's senior litigation counsel, said Friday an appeal should be filed within the next two weeks.

Texas American argued that 12 of the banks were solvent and should not have been seized. The FDIC claimed that the 12 healthy banks would have become insolvent once the agency took Texas American's flagship bank in Forth Worth.

After declaring all 24 banks insolvent, the FDIC sold them as a package to an investor group that offered to pump money into the network.

Further Lawsuits Pending

The case is complex and could affect the FDIC's procedures in closing solvent subsidiaries of troubled holding companies.

In addition to Texas American, the FDIC is wrestling with a $70 million suit filed by Dallas-based MCorp that alleges that the FDIC overstepped its bounds by shutting profitable units when the main bank failed. The suit is still pending.

Judge Sanders, presiding over the U.S. District Court for the Northern District of Texas, Dallas, ruled that the solvent banks were not treated equally as other creditors, and ruled in favor of Texas American.

Alfred J.T. Byrne, the FDIC's recently appointed general counsel, called the decision "a setback, and an important setback that we need to address forthright and carefully." ☐

Bank Panel Hears of Ailing Student Loan Guarantors

Reuters

WASHINGTON — U.S. Education Under Secretary Ted Sanders told the Senate Banking Committee on Friday that five to seven student loan guarantee agencies besides the ailing Higher Education Assistance Foundation are in a weakened condition.

HEAF, Overland Park, Kan., which is one of the nation's largest guarantors of student loans, faces serious financial problems because of higher default rates, and the Department of Education is negotiating for its takeover.

Mr. Sanders said the department is in intensive negotiations with one or more entities interested in assuming HEAF's obligations. He told the committee the maximum cost to the U.S. taxpayers of a takeover of HEAF would be $100 million.

Sallie Mae Solution

One possible solution would be for the Student Loan Marketing Association to become the guarantor of HEAF loans originated under the guaranteed student loan program. After *The Wall Street Journal* reported last Friday that Sallie Mae had bid to take over HEAF's assets, the agency issued a statement confirming only that the Education Department had invited proposals to resolve HEAF's difficulties.

A decision on HEAF's future should be made "in the near term," Mr. Sanders said in a subsequent interview. He declined to be more specific.

Committee Chairman Donald Riegle, D-Mich., argued that "once again it appears the federal government has explicitly or implicitly guaranteed risks stemming from the behavior of financial institutions over which it has little or no control."

Default Rate Soared

Mr. Riegle, at the start of the hearing on HEAF and Sallie Mae, said there was no adequate mechanism for the federal government to require sufficient capital or to step in more directly in the event of insolvency of privately run student loan guarantors. The Senate panel learned that the default rate on student loans grew 352% from 1983 to 1989, from $441 million to $2 billion.

Louis Gerhardstein of the Medill News Service contributed to this article.

Correction

A listing of the largest banks in Japan (July 26, page 24A) contained incorrect data for Sumitomo Bank Ltd., Osaka. Sumitomo had assets of $368.2 billion on Dec. 31, 1989, to rank as the second-largest in Japan and the world. Dai-Ichi Kangyo Bank, Tokyo, was the largest with $403.4 billion. Both banks were listed correctly in the ranking of the world's 500 largest banks, which began on page 14A.

COMMENT/*By Paul Nadler*

Banking Industry Follows In the Railroads' Tracks

To get a picture of what is happening to financial institutions today, just look at the main line of the old New York Central Railroad as it wends its way up to Albany from New York City.

Though the roadbed is wide enough for the four tracks that trains used to keep busy, now there are only two ¬ and for a while, part of the route was served by just one track!

Downscaling Needed

In sum, the railroad had too much invested in capital facilities for today's needs, so major downscaling was needed to avoid substantial losses.

Looking at the communities that have far too many bank and thrift offices – many of them large, expensive structures that devoured a lot of capital – one has to conclude that banking, too, must downsize. And though it is much easier to rip up rails than to find other uses for structures built as banks, finding those uses is part of the price for rationalizing bank and thrift operations and making them prosper again.

The reduction in the number of bank and thrift offices started with the merger-and-acquisition movement of the late 1980s. Now, the sale of troubled thrifts and banks to more profitable ones will undoubtedly speed up the process.

Looking at Who Failed

There is another way that the trend in railroads gives lessons for banking. This involves analysis of which organizations have failed.

As a graduate student in history, this writer became the world's leading expert on the abandoned railroads of Wisconsin. (I can claim the title because I am the only person who ever studied them.)

For my work, I had to examine every railroad in Wisconsin that had ever been abandoned – and there were lots of them. I found that though railroad building had started in the 1820s, every railroad ever abandoned in Wisconsin had been chartered and built after 1890.

In other words, the builders of the first 70 years had filled an economic need. But those who got into financial trouble had entered the field late, hoping to profit by generating new needs – or from the financing process, without regard to what the railroad would earn once completed.

Fast Growth Presaged Failure

Similarly, the vast majority of the banks and thrifts that have recently gotten into trouble grew from small shops into large institutions in the 1980s, under conditions that gave them virtually unlimited access to deposits and considerable freedom in their use.

As the president of a surviving thrift said of competition that had gone the Resolution Trust Corp. route: "They were growing more in one year during the 1980s than we had grown in 100 years!"

Many Closings Ahead

Just as railroads have abandoned entire lines (giving the nation the opportunity to acquire a large network of hiking and biking paths) and have downsized trackage on the lines still running, banking is likely to see a continued mergers and acquisitions and the closing of a tremendous number of branches.

Those branches cost a fortune to operate, and they are not needed in an era of automated teller machines, automatic borrowing through lines of credit and home equity loans, and centralized lending operations in headquarters.

Extensive Layoffs

And it is not just bank buildings that will have to be rationalized, although that will do a lot to reduce noncredit expenses. As banks try to boost profitability, the number of employees being laid off is staggering.

The chief executive of one major bank told a bank analyst friend of mine, for example, that the merger he has in mind could save his bank up to $300 million a year!

It is doubtful that banking will ever again need as many people as it employed as recently as a year ago.

To resist the trend would be folly, the kind lampooned in a 19th century satire in which candlemakers petition to force people to close their blinds in the daytime so more candles will be used.

Banking will rationalize itself into fewer and fewer companies. Some will be small, some medium-size, and some large – but far fewer will be redundant, as many have been up to now.

In banking and thrift operations as in railroads, our economy appears unable or unwilling to support excess capacity. A healthy, rationalized financial system is far superior to one that tries to do all things for all people, inside and outside the bank, but whose survival is in jeopardy every day. ☐

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at the Rutgers University Graduate School of Management.

"SOUND OFF"

Securities and Exchange Commission Chairman Richard C. Breeden recently suggested to Congress that the government should consider selling deposit insurance to consumers at a market rate. Mr. Breeden said such a system would allow each depositor to choose what level of insurance he or she desired and could help cut the deficit. The *American Banker's* Chicago bureau chief, Nanine Alexander, asked the following question:

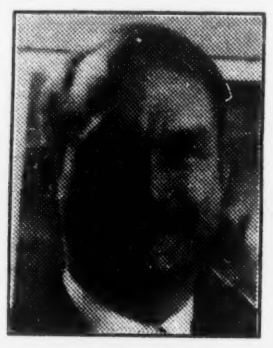
Q *What is the political viability of such a proposal among legislators, with the public, and within the banking community?*

■ Michael Heffer
Senior staff
San Francisco Consumer Action
San Francisco, Calif.

The timing is terrible for a proposal like this because of the publicity of the cost of the savings and loan bailout. What this says to the public is: not only will you have to pay for the bailout, but you will have to pay directly for insurance. It's similar to the 25-cent surcharge on deposits (a proposal abandoned by the Bush administration last year). Only this would be worse because people are in a state of shock.

An important concern of ours would be how this would affect consumers of different income levels. Would low-income consumers be priced out of insurance coverage because they couldn't afford it?

■ John Mitchell
Chief economist
U.S. Bancorp.
Portland, Ore.



I'm not sure this would fly. You can just picture an elderly widow appearing before a congressional committee saying how she didn't know that she had to get insurance on her life savings. That's one of the problems with a separate transaction notion.

I like the idea of lowering the amount that's covered, because not many families have $100,000. What we're supposed to try to do is to protect the family savings. This proposal would presumably affect higher income individuals, those with assets above the insurance limits. And we can also look at making it more difficult to broker deposits.

One thing that's good about the impulse behind the proposal is that you want to give people incentives to pay attention to where they put their money.

■ Larry A. Frieder
Professor of banking and finance
Florida A & M University
Tallahassee, Fla.

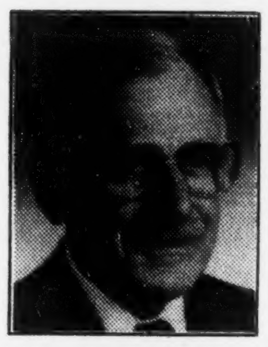
You'd get a public outcry whether you charge consumers for insurance or if you reduce the coverage.

There are some assumptions implied in Breeden's proposal. He supposes that depositors are earning more on accounts than they should and that savers are benefiting inappropriately by the current system. I wouldn't suggest lower coverage, but something should be done about multiple accounts. One solution would be to have separate deposit accounts that the banks would only be able to invest in safe securities like Treasury bills.

The insurance system as it exists isn't rational. The public perception is that the insurance system is endangered, that we have losses greater than the insurance fund. There is concern that the insurance system would break down and the taxpayer will end up picking up the tab.

I can't see the banks supporting such a proposal. It tends to increase the amount of government involvement in the operation of commercial banks. The Breeden proposal would increase the bureaucracy, restructuring it in a more problematic fashion. I think banks would find such a system impractical to implement.

■ Holmes Foster
Chief executive officer
Banks of Iowa
Des Moines, Iowa



From the industry standpoint, such a proposal drives money out of the bank to nonbank entities that are not insured. I think that does the public a disservice. The public probably isn't aware that they already pay for deposit insurance indirectly.

I don't know how this would help the deficit, and besides, I think the deficit is an excuse. What we need is some candor. What is the true cost of the S&L bailout? Where is the money going? Is it going to pay off depositors, is it the expense of regulation?

And don't blame this all on fraud. The thrift industry was vulnerable to deregulation. The regulators were warned and they ignored it. The Federal Home Loan Bank Board encouraged a lot of these problems when they began to reach for ways to help thrifts avoid the interest rate squeeze. ☐

Some Banks Opt Not to Travel The PC Route

By JEANNE IIDA

A few leading-edge banks are installing multimillion-dollar networks of personal computers in their branch offices, and many more are considering such outlays.

Proponents of the new approach say PCs can change the way branch personnel work, allowing them to market more effectively. But some bankers contend that branch personnel do not need PCs to cross-sell products.

ANALYSIS: *Follow-up on the news*

Traditional systems with a controller supporting scores of dumb terminals "get the same thing accomplished as a PC," said George P. DiNardo, executive vice president and technology chief at Mellon Bank Corp.

Controller-based systems are more sophisticated than ever before, observers say. And although controllers are expensive, the overall cost of such systems is considerably less than that of a PC network. A system of 10 PCs can cost one and a half to three times that of 10 terminals attached to a controller.

The cost of replacing an entire branch network with PCs can cost a large banking company tens of millions of dollars.

Two leaders in the migration to PCs, BankAmerica Corp. and Royal Bank of Canada, are near completion of personal computer networks. Analysts say each banking company will spend $50 million to $100 million on the project.

Security Pacific Corp. and Banc One Corp. are among the large companies following suit.

Advocates Cite Functionality

The main benefit of PCs is functionality, these advocates argue. Personal computer networks will open a whole range of new opportunities for selling products, they contend, because users have access to graphic, standard spreadsheet, and word processing software.

"Smart banks know you have to put in PCs to give people the functionality to serve customers," said Michael Simmons, executive vice president and chief of technology at Bank of Boston. "It's the coming trend."

During his tenure as technology chief at BankAmerica, Mr. Simmons oversaw the plan to install 21,000 PCs in the branches by early 1991. He is heading a similar effort at Bank of Boston, which has not established a timetable for its project.

Seidman Sees $2 Billion Loss at FDIC

By BILL ATKINSON

WASHINGTON — In the strongest indication to date that the cost of bank failures will rise dramatically, Federal Deposit Insurance Corp. Chairman L. William Seidman said on Tuesday that the bank insurance fund is likely to suffer a net loss of $2 billion this year.

The net decline, to about $11 billion after accounting for interest and premium income, would reflect gross payouts from the insurance fund of about $6 billion. That would be 50% more than the FDIC's $4.1 billion in gross liquidation and insurance losses in 1989 but still below the $7.4 billion it paid out in 1988.

No Specific Predictions

While Mr. Seidman was not specific in his predictions of possible bank failures and their timing, he called the $2 billion loss "a reasonable estimate."

It could be caused by one or more large bank failures or an increase in failures of smaller institutions.

Mr. Seidman said the number of banks on the FDIC's problem list continues to exceed 1,000, where it has hovered since last year. The agency has closed 113

Citicorp Defection Seen Derailing UAL Buyout

By WILLIAM GOODWIN

Citicorp's departure from the bank group leading the financing for the proposed $4.4 billion union-led buyout of UAL Corp. appears to have all but doomed the deal for now, banking sources said Tuesday.

Unless the buyout group can come up with an outside equity investor before its Aug. 9 deadline, the bankers said, it was hard to see how the deal could be completed.

Citicorp and Chemical Banking Corp. both pulled out of the bank group Friday, sources said, because the unions had failed to come up with an equity investor.

It remained unclear Tuesday whether Chase Manhattan Corp. had also balked. Chase, along with Citicorp and Chemical, did not attend a UAL bank meeting Friday.

That would leave only Bankers Trust New York Corp. and Manufacturers Hanover Corp. remaining in what was originally a five-bank group. None of the five banks would comment.

UAL Stock Plunges

A number of UAL's investors, evidently concluding that the deal had hit a major roadblock, bailed out of the stock Tuesday. The company's shares plunged $16.875 following a report in this newspaper that Citicorp and Chase were likely to pull out of the deal. The stock was down as much as $21 before rebounding somewhat late in the day.

The union group proposed to buy out the airline holding company in March for $201 in cash and securities, looking for roughly $4 billion from the banks. This offer was scaled down from management's aborted $300-a-share bid that failed noisily last October.

Citicorp's departure from the bank group is considered to be

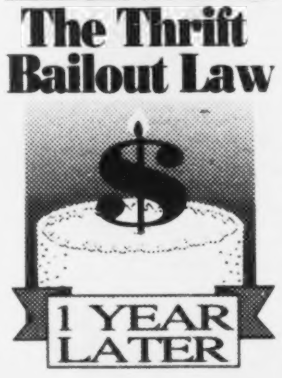
Year-Old Resolution Trust Corp. Is Under Pressure to Move Assets

By DEBRA COPE

Third of a Series

Nobody can say the Resolution Trust Corp. isn't trying.

One year into the massive job of mopping up failed savings and loans, the agency has racked up some impressive achievements: 211 thrifts shut or sold at a cost of $25 billion; 257 lined up in conservatorship; more than $60 billion in 5.7 million deposit accounts protected, and nearly $50 billion of assets transferred to private hands.



But the real work is just beginning. The RTC starts its second year with a mountain of distressed real estate, troubled loans, and other sour assets that totaled $37 billion at the end of June and could ultimately top $100 billion.

Bush administration officials estimate an additional 250 to 550 thrifts could ultimately require aid, bringing total failures into the range of 700 to 1,000. The Office of Thrift Supervision has already earmarked 621 thrifts with $343 billion in assets and $249 billion in deposits that may eventually need assistance.

Moving impaired assets, the residue of S&Ls deemed "resolved" by the RTC, won't be easy – especially in an increas-

BNE Discussing Membership in Home Loan Bank

By TOM LEANDER

Bank of New England Corp. is holding discussions on becoming a member of the Federal Home Loan Bank of Boston, the *American Banker* has learned.

The unusual membership would have attractions for both sides. Bank of New England would gain the ability to borrow at low rates from the district banks, providing another source of liquidity. The Home Loan Bank would gain by far its largest commercial bank member – $23 billion in assets – at a time when many of its thrift constituents are going out of business.

Law Expanded Eligibility

Under the thrift bailout law, membership eligibility in the Federal Home Loan Bank System was expanded to include credit unions and commercial banks that have at least 10% of their assets in residential mortgage loans.

"This is something that more and more commercial banks are

COMMENT/ *By Lowell L. Bryan*

Banking Crisis Is Different And Could Be More Serious

Journalists are already comparing the developing crisis in commercial banking to the savings and loan crisis. "What will this new crisis cost the taxpayers?" they ask.

They miss the point.

The banking crisis has far more serious implications for the economy, and the nation, than simply another taxpayer bailout. What is at risk is the health of the nation's $5.4 trillion economy and the global competitiveness of the United States in years to come.

The savings and loan crisis is a story of unenforced regulation, fraud, political gridlock, and with few exceptions, a decade of neglect by political leaders. The bottom line of this story is grim enough. Best estimates are that it will take $150 to $200 billion in current cash from the taxpayers to achieve an orderly liquidation of insolvent savings and loans.

A Different Story

The banking industry story is substantially different. That industry has about $200 billion in equity capital to absorb losses, while the savings and loan industry has had no tangible capital to speak of over the past decade. The banking industry is about three times the size of the thrift industry and is far more important to the economy.

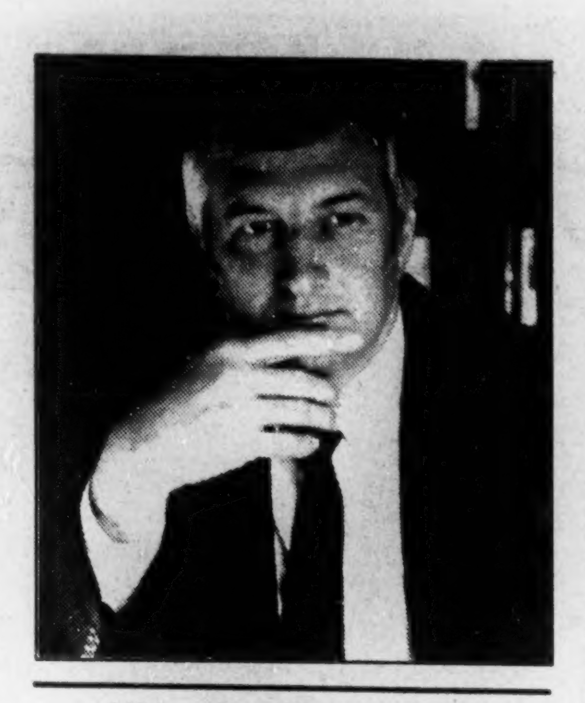
Banks are the primary source of finance for individuals, small businesses, and midsize companies. Banks provide the payment services (checks and money transfers) for the entire nation.

Money-center banks finance U.S. industries worldwide and represent the nation in the world's global capital markets. Moreover, banks are the Federal Reserve's primary vehicle for implementing monetary policy.

While the nation needs banks, the S&L industry lost its primary reason for existence about 10 years ago with the development and maturity of the mortgage-backed securities market. For the most part, healthy S&Ls are healthy because they act more like commercial banks or mortgage banks than classic thrifts.

A Plague of Loan Losses

There are, of course, some similarities between the savings and loan crisis and the problems developing in the banking industry. In particular, loan losses, in both industries have been massive. Commercial bank loan writeoffs have been over $70 billion during the past four years and are headed higher still; $6.6 billion was charged off in the first quarter of 1990.



"Institutions that take uneconomic risks should be allowed to fail, regardless of size."

In contrast, commercial banks wrote off only $28 billion from 1948 to 1981. If we were to have a recession, commercial bank loan losses would rise dramatically and the bank insurance fund would be under enormous strain.

Regulators have focused on the similarity between S&Ls and banks. No one wants to be held responsible for a repeat of the S&L crisis. Their first impulse has been to toughen lending standards and raise capital requirements.

Such conservative regulation is appropriate for all government-insured depositories, and it should have been started several years ago. In the short term, however, we face a potentially devastating credit crunch, particularly for small businesses, midsize companies, and builders.

Regulators are now aware of these risks. In their public discussions with bankers they have urged them to keep funds flowing to all creditworthy borrowers. The regulators face an unenviable task. They are walking a tightrope between being too strict and not strict enough.

Tougher regulation is not enough. If we want to maintain global economic leadership into the next century, we must remake our banking system to accommodate emerging markets around the world.

Both the savings and loan and banking crises share a common cause. They are both a result of unleashing market forces without fundamentally reforming the regulatory structure. In particular, interest rate ceilings on deposits were removed without consideration of the consequences.

Weak competitors, which were least able to replace their regulatory-based profits, plundered the deposit insurance system to replace this lost income with high-risk assets. In many thrifts, outright frauds were allowed to raise money and funnel it into their own pockets.

Uneconomic Activities Abetted

But the larger problem was that credit flowed into uneconomic activities. In a few years, a mountain of credit was created to finance commercial real estate, condominiums, and takeovers of companies at prices well in excess of the ability of borrowers to finance that debt out of cash flow. Meanwhile, the government was slow to remove failing competitors from the industry.

The result is a fundamental overcapacity that has eroded the profitability of even the best banking competitors. More seri-

Mr. Bryan is head of the North American banking practice at McKinsey & Co. in New York.

GRAPEVINE/ *By Jed Horowitz*

Citi Clamps Down, Callen-Style. The memo to 15,000 Citibankers arrived last Friday with an ominous introduction. "We must act," wrote Michael Callen, head of investment and corporate banking in Japan, Europe, and North America. "Our performance versus plan makes that abundantly clear. No one can wave a magic wand and make the marketplace a kinder or gentler place — that's not reality."

But instead of hoisting the ax, Mr. Callen merely outlined eight policies on expense cutting — most of which staff member thought were already in place.

The "new" policies: Prior written approval from senior executives is required for any external hires, for external consultants, for purchases of PCs and mobile phones, and for offsite conferences; meals among staffers in the same city will no longer be reimbursed; economy class is the rule when flying domestically, and business class may be used only on international flights beyond six hours. Mr. Callen also urged that use of hired cars be limited.

A spokeswoman said that Mr. Callen's intent was to ensure "a more even, across-the board approach to costs." As for the staff cuts? "Everyone is still waiting for the other shoe to fall," said one banker.

* * *

Banks In Armor. After almost 20 years, the Federal Reserve Board is letting banks into the armored car business. The Fed last month overturned a ruling by an administrative law judge who said that armored car services are not closely related to banking, so bank holding companies and their subsidiaries cannot run them.

Most banks own armored cars and use them to service automated teller machines and transfer funds among their own offices. But the banks also have excess capacity, which they want to sell to customers, said Richard Whiting, general counsel at the Association of Bank Holding Companies.

For Metrocorp, the small East Moline, Ill., holding company that was the subject of the administrative law judge's ruling, the victory is not so clear. "We still have a relatively big fight on our hands," said Marcus Hobert, general counsel of the $160 million-asset company.

He said the judge, Paul G. Clerman, has now been ordered by the Fed to determine whether armored car services meet a second test of "proper incidence" to banking. All the major armored car companies and their trade associations are fighting to prove that they do not, he said.

While the "closely related" decision provides a general imprimatur, the proper incidence qualification is much more bank-specific. Metrocorp will have to show that offering the services won't harm competition locally, violate local branching laws, or affect the safety and soundness of its main subsidiary, Metro Bank, Mr. Hobert said.

* * *

Republic In the Palms? It's an open secret that Republic New York Corp., the capital-rich New York bank, wants to buy Florida Federal Savings Bank, the failing St. Petersburg-based thrift.

Officials at neither institution would confirm rumors that have circulated throughout Florida for several weeks. But the *St. Petersburg Times* reported on Tuesday that Republic is pursuing a deal. "We do have an investor with a strong interest in recapitalizing us," a spokeswoman for Florida Federal said Monday, noting that several other potential rescuers dropped out after the company said it would have a negative net worth of about $90 million after adding $36.3 million to its loan loss reserves.

Officials at Lyons, Zomback & Ostrowski, the New York investment bank that represents Florida Federal and also has done deals for Republic, would not comment.

A deal would almost certainly be contingent on the government's pumping at least $90 million into Florida Federal and assuming some problem loans. Republic, controlled by Edmond Safra, would have to add about $135 million of capital to bring the $4.5-billion asset thrift's tangible capital up to the 3% level required by regulators, said Samuel Beebe, an analyst at Williams Securities Group.

Republic, which prides itself on cheap funding that comes from having a large retail deposit rate, in the past three years has purchased the $3 billion-asset Manhattan Savings Bank and the $3 billion-asset Williamsburgh Savings Bank. The 78-branch Florida Federal – despite its involvement in a student loan scandal – would be a natural fit for Republic, analysts said.

* * *

Still Hot on Junk. Bankers Trust New York Corp. lost the bidding for Columbia Savings and Loan Association's $3 billion-plus portfolio of junk bonds last week, bank sources confirmed, but picked up an education in the process. "We showed some credit horsepower in evaluating the pieces and presumably picked up some leads," said one banker.

Bankers Trust also is readying a private placement of a junk issue that should be "teed up within the next few weeks," an official said. It would be the first junk issue managed by Bankers Trust since it received permission from the Federal Reserve Board last year to underwrite corporate debt. □

Offitbank Is Set to Open - With Help from a Rival

By MAUREEN NEVIN DUFFY
Special to the American Banker

Morris W. Offit is converting his small, closely held investment management firm into a limited-purpose trust company, or private bank. And one of his initial investors is a competitor.

Pitcairn Financial Management Group, a high-end investment firm in Jenkintown, Pa., has put $500,000 in the newly formed Offitbank, New York.

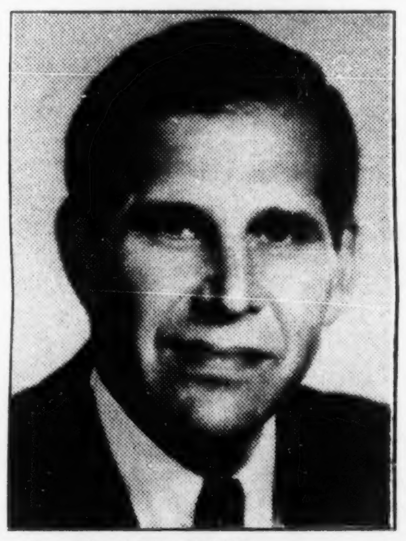
Pitcairn, which is entering private banking through the acquisition of Trustees' Private Bank in Philadelphia, bought the stake in Offitbank on the recommendation of David Lawson, Pitcairn's vice president in charge of small capitalizations. Mr. Lawson said he was impressed by the firm's "ability to leverage its investment management business with private bank services."

As with many other investment houses, "a lot of high-net-worth clients were going elsewhere for their private bank needs, such as collateralized lending," said Mr. Lawson. "I saw Offit Associates' move as the opportunity to recapture that base of business. Furthermore, he's got a pretty big upside to his private bank just by tapping his existing client base."

Offit has some 170 clients, 130 of whom are individuals or families. The rest are corporations, universities, and cultural and religious institutions. Its prime market is families with $10 million net worth.

Expanding Its Services

Because of its beginnings as a small, closely held investment advisory, Offitbank is similar to Pitcairn and to Bessemer Trust Co., New York. Both started with family trusts and branched out into other banking services.



Morris W. Offit

"I guess anyone in the investment business would be a competitor," Mr. Lawson said of Offitbank. But he stressed that the companies have had different investment strategies, Pitcairn being heavily involved in equities and Offit concentrating on fixed-income instruments.

Mr. Offit's fixed-income house concentrates on low-risk treasuries and mortgage-backed bonds, but it also manages some high-yield bonds.

The newly chartered investment management bank will emphasize global investment, Mr. Offit said. With the charter, he hopes to enter relationships with overseas banks of the European or Swiss tradition, which he used as a model for Offitbank.

Mr. Offit said he is even considering sharing ownership with foreign banks.

The charter also paves the way for the company to offer a broader array of services. Instead of directing clients to other banks for lending services, the company can now offer loans with portfolio collateralization, provide custodial services, and can act as a trustee.

Offitbank also plans to expand its foreign exchange services from individual to corporate clients. "We needed the charter to get access to the interbank market in foreign exchange dealings," Mr. Offit said. Foreign exchange transactions for clients amounted to $2 billion last year. About $600 million of the company's $2.5 billion under management is in global fixed-income products.

Offitbank, which was capitalized at $10 million, does not have Federal Deposit Insurance Corp. coverage, nor is it taking deposits. But Mr. Offit said it would consider both in the future.

Regulators Welcome

The New York State Banking Department approved Mr. Offit's charter application in late July after an 18-month application process.

Mr. Offit, 53, says he put his investment advisory service, Offit Associates Inc., into the arms of state banking regulators without apprehension. "I've always welcomed the prospect of regulatory oversight, because I thought it would make customers even more comfortable," he said. "Clients can walk in our offices any day and take a look at their records."

Before starting his own firm, Mr. Offit was with Julius Baer Securities until 1982. There he was responsible for domestic and international portfolio management. Before that, he spent 12 years with Salomon Brothers Inc. as a partner in charge of investment research, international sales, and trading. He was research head of Mercantile Safe Deposit and Trust Co., Baltimore, until 1968.

Perrin Long, an analyst with Lipper Analytical, New York, said Mr. Offit has had a good record as an investment adviser. "There is a great place for investment management services in today's economy," he said.

Mr. Offit is using the tag line "the investment management bank" on all promotional literature to distinguish the company from its credit-driven competitors.

Ms. Duffy is a freelance banking reporter based in New York.

Customer Service Training Gap Seen

Many Institutions Lack Formal Programs, Survey Finds

By ELLEN MEMMELAAR

NEW YORK — Customer service representatives are gaining in importance as bankers turn to them to aggressively cross-sell products. But many of these key staff members do not receive even basic training.

Only 64% of banks have formal training programs for customer service representatives, according to a survey by the Bank Administration Institute. The same poll showed that 57% of customer service managers consider training a critical issue over the next two years.

Second-Class Programs

Banks are indeed behind the times in training programs, some industry watchers said. They said expenditures for training are of secondary importance, management is often unfamiliar with the sales process, and many bankers attack sales from the wrong side of the desk.

"Banks need to do a better job of understanding the economic benefits of training over time," said Les Dinkin, a Westport, Conn.-based consultant. "It's a different way of doing business."

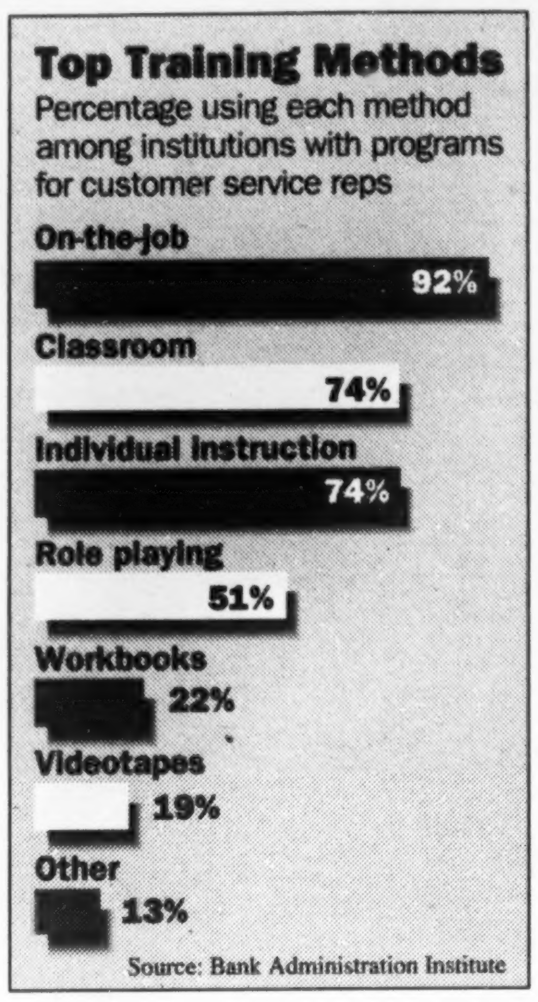
Only 64% of banks have formal training programs for customer service representatives.

Bankers are relying less on rate slashing to attract customers and more on tellers and customer service representatives to generate revenue, observers said. To be effective, the employees must be well versed in cross-selling.

The Art of Cross-Selling

Customer service is the most important aspect of establishing a sales culture, said Robert Hall, president of Action Systems, a Dallas-based consulting firm.

Top Training Methods
Percentage using each method among institutions with programs for customer service reps



Source: Bank Administration Institute

In the first part of his company's employee training program, Mr. Hall takes bankers through steps to understand what service is, its importance to the overall institution, and the specific skills needed to improve service.

Then clients can be trained to cross-sell. For this stage, Mr. Hall teaches customer service representatives about the products and what they should look for in potential customers.

"It is as important to know who not to cross-sell as it is to know who to cross-sell," Mr. Hall said.

Reluctance at the Top

Bankers, however, are reluctant to inject dollars and manpower into such training programs because results are difficult to trace, Mr. Dinkin said.

Other experts cite a problem that begins at the top. Managers who have spent their careers in banking often do not know how to foster a sales culture.

Some managers simply "do not understand how to talk to the customer's needs," said David Bennett, president of Omega Performance Corp., a San Francisco-based consulting firm. "Bankers tend to talk about the product from the banker's point of view."

Creating a Sales Culture

A sales culture can be fostered only if management is knowledgeable about the sales process and actively encourages it, said James Schneider, a consultant based in Jupiter, Fla. If key people don't understand the process, "their own discomfort will be passed down," he said.

Of the respondents in the Bank Administration Institute study who have formal educational programs for customer representatives, 92% use on-the-job training; classroom and individual training tied for second place, at 74%. These methods get thumbs-up from consultants because they offer individualized training and allow for role-playing.

Self-directed programs using videotapes were reported by 19% of respondents, and 22% used workbooks. Other tools used include computer-based training, audio tapes, books, and manuals. But consultants caution that these self-training methods may only appear to be cost-effective.

57% of customer service managers consider training a critical issue over the next two years.

"Videos are too passive," said Mr. Schneider. "Most programs teach a monkey-see, monkey-do kind of thing. Too often, the scenarios are not relative to the person working."

Mr. Dinkin said videos can effectively convey product knowledge but are less successful when used for sales training. "There needs to be a high level of interactive participation in order to understand and refine sales skills," he said. ☐

Higher Capital May Impair Bank Safety

By SANFORD ROSE

By persistently demanding that banks operate with ever higher ratios of capital to assets, the regulators may end up doing a disservice to the industry, to the country, and to themselves. Higher capital ratios may under certain circumstances increase rather than decrease the risk profile of banking institutions.

In theory this isn't supposed to happen. The greater the owner's stake in the business, the more prudent he is supposed to be. Unfortunately, theories don't always work out in practice.

Comment

As noted in a previous comment, it makes little sense to ask banks to raise capital-asset ratios by increasing the numerator – i.e., by selling additional shares. Why, pray tell, should we encourage the expansion of an already overcrowded industry whose marginal revenues are likely to fall short of the marginal cost of the equity raised? That course of action is unsound from the viewpoint of both the individual firm and society as a whole.

In practice, faced with the need to lift capital-asset ratios, most banks will choose to shrink by paring assets and paying down liabilities. What will be the impact of this maneuver on the safety of banks?

Two Steps Up, One Step Down

By definition, retrenchment will raise the book value of the capital-asset ratio. But the relevant question is what will happen to that ratio in market-value terms. That is, the regulators should be concerned with whether the market value of capital ends up as a larger or smaller fraction of the market value of bank assets.

Retrenchment should raise this market-value ratio, but by less than the increase in book-value terms. That's because the per-share value of bank capital should fall, for at least two reasons. First, as banks substitute equity for debt, their taxes will rise. Interest on debt is tax deductible, while dividends are not. Thus, higher capital-asset ratios will tend to reduce after-tax profitability, lowering per-share values.

The second reason for falling per-share values has to do with deposit insurance. Bank shares include a premium for what is called the deposit-insurance subsidy. That is, by failing to graduate deposit-insurance

MNC to Place $180 Million Of Preferred

By KELLEY HOLLAND

In its first move to boost capital and liquidity since disappointing second-quarter results prompted funding difficulties, MNC Financial Inc. said on Monday that it will privately place $180 million of preferred stock with an already powerful member of its board of directors.

"The sale of the preferred shares represents a significant step in the company's efforts to strengthen its capital position," said Alan F. Hoblitzell Jr., president and chief executive officer, in a prepared statement.

Line of Credit in Works

The announcement confirms earlier reports that MNC was seeking an equity infusion of about $200 million. In addition, the company is also known to be putting together a $750 million line of credit with J.P. Morgan & Co.

The move, which does not necessarily reopen the capital market for the Baltimore-based company, could increase company director Alfred Lerner's ownership of MNC equity to 23%, analysts said.

"He was the dominant shareholder before. This makes him

Firstar of Wisconsin To Buy Banks of Iowa

By NANINE ALEXANDER

Banks of Iowa Inc., which recently canceled a nine-year-old agreement to merge into First Bank System Inc. of Minneapolis, said Monday that it would instead be acquired by Firstar Corp.

Milwaukee-based Firstar Corp. agreed to pay about $219 million in stock, about 20% below the price First Bank System agreed to pay before its own earnings problems scotched the deal.

First Deal Under New Law

The Firstar acquisition would be the first allowed under an interstate banking law passed by the Iowa legislature earlier this year and taking effect next Jan. 1. Banks of Iowa would become a wholly owned subsidiary called Firstar Corp. of Iowa, part of a five-state superregional with $11 billion in assets.

With Banks of Iowa's assets added, Firstar would rise about seven places from its yearend 1989 rank of 62d among bank holding companies. It is already the largest in Wisconsin.

Value is $75.60 a Share

The definitive agreement, announced Monday after what company officials said were several months of negotiations, calls for Firstar to exchange 2.7 of its shares for each of Banks of Iowa 2.9 million outstanding shares. Based on Firstar's $28 price at last Friday's close, the transaction would have an indicated value of $75.60 for each Banks of Iowa share.

By contrast, First Bank System's unconsummated stakeout agreement called for an eventual purchase price equal to one and

Nuclear Industry Promises to Be A Hot Source of Trust Business

By RICHARD LAYNE

NEW YORK — Regulatory changes governing the nuclear power industry have created a potential pool of $100 billion in trust assets, the largest source of new trust business in recent memory.

In keeping with two-year-old federal regulations, corporations that own nuclear power plants had to establish trust funds by July 27 for dismantling those plants. The initial funding of the accounts is small, but the guaranteed annual growth and staggering potential have had bankers scrambling for the business.

"All of a sudden," nuclear decommissioning trusts have become "a new, large market," said Richard L. Deeter, vice president at Harris Trust and Savings Bank, Chicago.

Four Clear Winners

Four banks have emerged as the early winners in the battle for these trusts accounts, according to trust bankers. They are Harris Trust, Mellon Bank, Bankers Trust New York Co., and State Street Bank and Trust Co., Boston.

The trusts are mandated by Congress to ensure that funds will be available to clean up nuclear power plants when their 40-year licenses expire. The Nuclear Regulatory Commission reports that 60 utility companies have 114 nuclear plants in operation, with more being added yearly.

$1 Billion to Be Added Yearly

The Edison Electric Research Institute in Washington said utilities have so far put $2 billion in what are termed nuclear

Middle-Market Relationships Face a Threat

By WILLIAM GOODWIN

At a time when banks are at least paying lip service to relationship banking, their interest in securitization could endanger the relationships that have always driven middle-market lending.

"Certainly, there's going to be a lot more securitization of middle-market loans in the next five years," said John Leahy, senior vice president in charge of middle-market lending in the Northeast at Chase Manhattan Corp.

Since the mid-1980s, banks have been securitizing everything from credit card receivables to recreational-vehicle loans, to highly leveraged transactions. Securitization allows banks to remove these assets from their balance sheets, thereby improving financial ratios and cutting capital requirements.

Middle-market borrowers are generally defined as companies with annual sales of $5 million to $250 million. According to

COMMENT/*By Sanford Rose*

Higher Capital May Impair Bank Safety

"Rising capital ratios will force banks to opt out of national credits, to their detriment."

Continued from *page* **1**

charges according to bank riskiness, the government in effect subsidizes the bank shareholder, and this subsidy is embedded in the stock price. Any increase in the owner's capital stake in the bank tends to reduce the value of the subsidy, thereby lowering the worth of individual shares.

Nevertheless, these tax and deposit-insurance consequences are what economists call second-order effects. By reducing per-share values, they limit the gains in capital-asset ratios in market-value terms. But they do not nullify these gains.

A Disturbing Proviso

An increase in capital-asset ratios, whether achieved by raising additional capital or by paring assets, will probably raise the amount of market-value capital backing each dollar of assets. Provided the risk profile of assets remains unchanged, the capital cushion protecting the deposit-insurance fund will become somewhat more adequate than it was previously.

But the proviso is terribly important. If, in the process of retrenching, banks increase the risk profile of assets, the additional capital cushion may prove insufficient, and the effort to raise capital-asset ratios may end up being counterproductive.

A case can be made that asset shrinkage is in fact apt to increase the riskiness of bank assets. When banks retrench, they probably do so by eliminating those assets whose profit per unit of required capital is lowest.

Since capital requirements are not at present graduated according to the true riskiness of loan assets, banks earn less per dollar of required capital on low-spread, low-risk commercial loans made to national companies than they do on, say, credit extended to local middle-market firms.

Therefore, if pressed to retrench, banks are most likely to purge relatively high-grade commercial credits from their portfolios. And although not exactly loaded with such loans, banks still hold a measurable chunk of the business. As these sounder commercial credits are eliminated, the average probability of loan defaults will rise.

But the effects of asset retrenchment will extend beyond that of increasing expected losses. The true riskiness of the loan portfolio depends on the correlation or covariance of asset returns, which measures the likelihood that a given economic disturbance will result in a simultaneity of customer defaults.

Down with Interdependence!

The evidence shows that most large as well as small banks have highly concentrated loan portfolios. They lend to predominantly local borrowers, most of whom tend to be vulnerable to the same regional economic shocks.

Otherwise put, the customer populations of most banks exhibit high positive loss correlations. Borrower business fortunes are closely interdependent, whereas, from the banks' viewpoints, these business fortunes should be as independent of each other as possible.

In order to lower loss correlations, banks should *increase, not decrease,* their lending to nationwide firms. That's because while loss correlations are in most cases strongly positive within given regions, they are much less positive, and may even be negative, across regions.

Disproportionate Drop in Risk

A study of the 50 largest banks in the country done some years ago found that these institutions could have greatly improved their asset-efficiency ratios – defined as returns minus average losses divided by a measure of loss volatility (standard deviation) – by substituting a hypothetical pool of loans made to nationwide companies for a large fraction of their existing, and mostly local, business credits.

Although spreads would have fallen, asset-efficiency ratios would have risen because the decline in risk, as measured by the loss volatility, was greater percentagewise than the drop in returns. The reason for the sharp decline in risk was that the loss correlations between the loans in the nationwide pool and the loans in the banks' existing portfolios were lower than those within these portfolios.

In other words, the factors that produced clusters of local losses did not affect, to nearly the same degree, the fortunes of the national firms, reaffirming that banks can materially reduce the threat of loss simultaneity by lending across regional lines. But if banks curb interregional lending – if they in effect turn completely away from the national firm – they obviously circumscribe their diversification opportunities and increase their risks.

More Failures Likely

Yet because lending to national firms is generally a low-spread activity, that is precisely what will probably happen when capital requirements are increased.

As a result, asset shrinkage will not only raise the mean probability of loan defaults, it will also increase their variance. When times turn bad in a particular region, its banks will experience a higher percentage of portfolio losses than would have been the case had they remained active in the national loan market.

Therefore an indirect, but nonetheless very real, consequence of higher capital-asset ratios is likely to be more rather than fewer bank failures. And while capital cushions, expressed in both book- and market-value terms, will rise, they will probably not rise sufficiently to protect the deposit-insurance fund from the increased threats to its integrity. ☐

CRIME BLOTTER/*By Tom Leander*

Trust Officer Violated Trust

"What I did was my own fault," a fallen trust officer told the judge as he was sentenced in Milwaukee federal court last week.

"I was in a dream world," added Dale Phillips, 44, formerly of Associated Kellogg Bank in Green Bay, Wis. Mr. Phillips was convicted of embezzling $1.5 million from trust accounts and spending the money on luxury items – including a $350,000 house, a $100,000 sailboat, and expensive cars.

Judge Thomas Curran gave Mr. Phillips the maximum penalty of 51 months in prison. The stiff sentence was partly to punish the the former trust officer for reneging on a promise he made in May, when he was convicted, to sell off his ill-gotten assets to make restitution to the bank.

Defense attorney Gerald Boyle, arguing for a lighter sentence, sought to portray Mr. Phillips as a "Walter Mitty" character who led a fantasy life of luxury, while his actual salary at the bank was $30,000 a year.

Mr. Phillips avoided detection while skimming off the money over five years, prosecutors explained, because most of his clients were elderly and did not keep a close eye on their trust accounts.

In-Law Gets into the Act

The long arm of the law reached out last week to a money launderer's mother-in-law, who was charged with threatening a customs agent who helped convict her son-in-law.

Gloria Parra De Espinosa is the mother-in-law of money launderer Akbar A. Bilgrami, one of five former bankers convicted last week of laundering illicit drug profits at the Bank of Credit and Commerce International, Tampa.

After the verdicts were read on July 28, Ms. Espinosa allegedly grabbed U.S. customs agent Gregory Cook, who participated in a two-year sting that netted Mr. Bilgrami and the others, and said: "You did a good job, agent – your children will pay for this."

Ms. Espinosa, 54, is a Panama national who earned a doctorate in psychology in the United States. Both her husband and her ex-husband signed a $250,000 bond to obtain her release.

Robert Polli, an attorney for Ms. Espinosa, said the remark was not a genuine threat, but rather the "emotional outburst of a distraught mother."

The trial in Tampa drew international attention because one of the convicted bank employees was Amjad Awan, the former personal banker to deposed Panamanian strongman Manuel Noriega. The money-laundering ring was broken via an intricate, two-year sting operation in which customs agents posed as financial consultants with close ties to Colombian drug lords.

More Troubles for Spiegel

The screws appear to be tightening on former Columbia Savings and Loan chief executive Thomas Spiegel. Last month, the Office of Thrift Supervision accused Mr. Spiegel of squandering $19 million of Columbia's money on such frivolous items as corporate jets, condominiums, and expensive free concert tickets for friends.

Mr. Spiegel resigned as Columbia's chief executive in December, after losses in the thrift's large junk-bond portfolio left it teetering on the brink of seizure by regulators. Next, the OTS filed a civil complaint against Mr. Spiegel, seeking to recover the $19 million along with $5 million in fines.

In the latest development, Mr. Spiegel's lawyers last week said that the OTS is ready to add new charges to the original complaint, involving expenditures for Mr. Spiegel's private security staff.

Variation on an Old Trick

A ruse that usually works well for pickpockets tricked an armored-car employee out of $50,000 last Thursday outside LaSalle Bank Lake View, in Chicago.

The employee was making a routine delivery to tellers, pushing a cart loaded with cash into the bank branch, when he noticed a stack of $1 bills on the sidewalk.

The employee, whose name was not revealed by police, rose to the bait. He left his cart momentarily to pick up the money, which he handed over to a teller inside the bank.

Only later, according to Detective Ernest Ursitti of the Lake View police, did the employee notice that $50,000 had been removed from his cart while he was picking up the singles.

Detective Ursitti said a witness provided a description of the man who dropped the bills, but no arrests have been made. ☐

Nuclear Power Industry Is Hot Source of Trust Business

Continued from *page* **1**

decommissioning trusts. The institute said $1 billion more will be invested by yearend. Required contributions will bring in at least another $1 billion in assets yearly. By 2008, the nuclear trusts will have $100 billion in assets, the NRC estimates.

The trusts are attractive not only because of their potential size, but also because no money can be withdrawn until the 40-year licenses for the plants expire. Until the licenses run out, utility companies must continue to put money into the trust.

"The real impact is they have to set aside large amounts of money every year," said Mr. Deeter. "It's a steady stream of assets." As of last week's deadline, Harris said it had gained $275 million in assets from nine nuclear trust accounts, about the same as a medium-size pension fund. Two of the trust accounts cover big California nuclear plants and could be worth nearly $1 billion apiece in 20 years.

Oldest Plant Still Operating

The Nuclear Regulatory Commission estimates that it will cost $165 million to clean up the average plant, but costs vary greatly by size. The oldest nuclear plant is the Yankee Row plant near Pittsfield, Mass., which was licensed in 1960 and is still operating.

Utilities with older plants must make fairly large trust contributions now; contributions for new plants will be small initially.

Utility companies with older plants must make fairly large trust contributions now, while contributions for new plants will be relatively small initially.

"These assets are expected to grow dramatically," said Carter Reynolds, senior vice president of Bankers Trust, which now has four nuclear trust accounts with a combined $150 million in assets. Ms. Reynolds said its trusts will grow tenfold over the remaining life of the plants, roughly 20 years.

So far, Mellon's 11 nuclear trusts represent $310 million in assets, said Timothy F. Keaney, Mellon vice president.

State Street did not return phone calls or answer inquiries about the size of its nuclear trust business.

Fee Growth Seen

The nuclear decommissioning trust accounts are generating only limited fees at this time, say bankers. The average account size – about $30 million – and regulations limit tax-credit investment to safe securities such as municipal bonds.

"For now, their contribution to our profitability is small," said Mr. Keaney of Mellon, which has opened twice as many decommissioning trust accounts as employee-benefit accounts in the past year. "But in five years, we expect it to be significant."

When the accounts grow, some trusts will require five investment managers and sophisticated monitoring of performance. As a master trustee overseeing the investments of these funds, Mellon expects its service fees to increase commensurately.

Karen Adams, a vice president at Mellon, said that only half of the 60 corporations that set up trusts looked for a national trust bank. The balance elected to open trust accounts with their local banks, in some cases for political reasons.

But some of these utilities may switch trust providers, she said, because small banks may not be able to supply the monitoring and investment managers required. Complex back-office systems, typically present in big master trust banks, are needed to do the job. ☐

Not surprisingly, they spend just a little more freely. Which is precisely what occurs each year in response to the Visa Our Treat℠ promotion.

We give people the chance of having one of their Visa purchases paid for. And then, during the heaviest shopping period of the year, they go to town.

It's a strategy that could pay off big, considering we'll be giving away $1 million worth of randomly selected transactions between October 1 and December 31, 1990. Meaning some 15,000 cardholders will get a Visa purchase on us.

Whether it's a new bowling ball. Or a trip to Bali.

Either way, you'll win even bigger.

After all, Our Treat has led to record fourth-quarter volumes for two years in a row. And, with proven consumer awareness (plus a major ad campaign in the works), this year promises greater rewards.

For your own program guide and sample statement inserts, simply give us a call at 1-800-876-5657.

And put human nature to work for you.

It's everywhere you want to be.®

Bluebonnet Deal Defended by Fail

Continued from *page* **2**

Metzenbaum.

Bankers Life, an insurance Company he dealt with, "gave me $25 million at the closing and said they would be responsible for the other $10 million under certain circumstances."

On key details, including the date on which Bankers Life committed to fund the deal, Mr. Fail was hazy. For example, Mr. Fail said he was not sure if newspaper reports that Bluebonnet received $275 million last year are true.

He also told the panel he probably did not look over a statement he signed that represented that he had not been the subject of civil or criminal actions.

A 1976 Alabama indictment against Mr. Fail was dismissed with the stipulation that it could not be brought again, but the insurance company he owned was convicted of fraud and Mr. Fail agreed not to underwrite or sell insurance in the state again.

But Mr. Fail said that some details might have been overlooked in the rush to get the deal done by the end of the year.

Mr. Fail said it was not until Dec. 9 that the Federal Home Loan Bank Board, the now-defunct thrift regulatory agency, told him he was once again considered a serious bidder for the group of Texas thrifts. After a week of negotiations, he said, the Bank Board gave him a Dec. 28 closing date.

That date was moved up to Dec. 22. After a week of frantic work, he arrived at the Bank Board offices to face "the biggest pile of documents I have ever seen in all my life." ☐

An Equity Swap Is Considered Crucial for BNE

By TOM LEANDER

ANALYSIS: *Follow-up on the news*

The $33 million second-quarter loss posted by Bank of New England Corp. did not conclusively signal whether the deeply troubled institution can rebound from staggering real estate loan problems. But it is looking as if the third quarter could be decisive.

By the end of September, the Boston-based company and its subsidiaries will have to increase its razor-thin 1.64% capital ratio, decrease its whopping 13% ratio of nonperforming loans, and convert a significant amount of its $700 million in outstanding debt to equity, thereby avoiding hefty interest payments.

With the $23 billion-asset company's options for raising capital running out and with an absence of operating income, an exchange with bondholders is becoming critically important.

Retiring all outstanding debt would free the company from about $60 million in interest payments a year. Some $28 million is due by Oct. 1. The next payment, $7.1 million, is due next Wednesday.

Need for Agreement Cited

"The holding company has to come to terms with the bondholders," said Gerard Cassidy, a securities analyst for Tucker, Anthony & R.L. Day in Portland, Maine.

"In light of the deepening banking crisis in New England, regulators will be hesitant to approve the interest payments [on the company's bonds]," he added.

A deal to swap all of the company's senior and subordinated debt for cash and securities could possibly increase its capital level to about 3% or 4%, one analyst estimated. Regulators had ordered the company to raise its equity level to 3% by May 31, but so far have not penalized the bank for failing to do so.

Exchange Offer Expected

"We believe an exchange offer for all issues of [Bank of New England's] debt is imminent," said Douglas Randall, managing director of Balfour, Maclaine Capital Markets Inc., a brokerage house.

"We would regard the absence of an attempt to exchange as a sign of imminent seizure by the regulatory authorities," he said in a recent report.

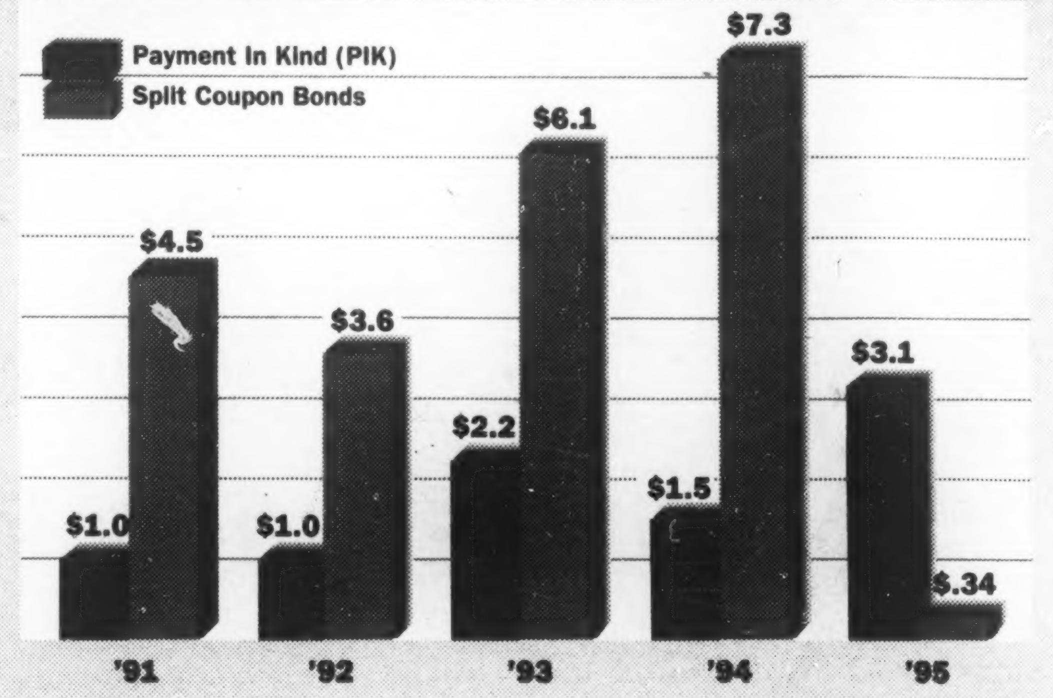
Opportunity or Time Bomb for Banks?

Amount of securities that begin paying interest in cash, by year. Dollars in bilions



Source: McCarthy, Crisanti & Maffei, Salomon Bros.

Judgment Day for the Leveraged: Time to Start Paying the Interest

By STEVEN LIPIN

The day of reckoning is rapidly approaching for many companies that used interest-deferred securities to finance recapitalizations or leveraged buyouts. For banks, that will provide both opportunities and dangers.

As the deadlines approach for billions of dollars in securities to begin paying interest in cash, leveraged companies that are doing well will probably seek to replace much of the debt with bank loans, creating a large market for lenders.

But for companies doing poorly, the required payments could sap cash flow, threaten balance sheets, and weaken the position of existing bank loans senior to the debt.

The exotic high-yield securities that defer cash interest are a child of the LBO wave of the '80s. These instruments became popular because they temporarily took some of the pressure off the borrowers. One type, called payment-in-kind securities, enabled payments to made in the form of additional securities. Another type, zero-coupon bonds, deferred any payments for a number of years.

But starting in 1991 and in-

OTS Seeking $40.9 Million In Restitution From Keating

By DEBRA COPE

WASHINGTON — Stepping up its effort to salvage some cash from the ruins of Lincoln Savings and Loan Association, thrift regulators took action on Thursday to obtain $40.9 million in restitution from Charles H. Keating Jr. and five former directors of American Continental Corp., Lincoln's Phoenix-based parent.

T. Timothy Ryan Jr., director of the Office of Thrift Supervision, said the restitution amount is the largest ever sought from a single thrift, though it is dwarfed by the $1.1 billion racketeering claim that the Resolution Trust Corp. has filed against American Continental. The restitution tactic is designed to increase the pressure on Mr. Keating to account for his holdings.

"We are just trying to move on multiple fronts," Mr. Ryan said.

Poor-Mouthing Fails

"Charles Keating Jr. has amassed vast sums at Lincoln's expense, and he now claims he is broke," Carolyn Lieberman,

Analyst Testifies That Banks Need 'Breathing Room'

By ROBERT M. GARSSON

WASHINGTON — The commercial banking industry does not need forbearance from regulators, but it does require "a little breathing room" to adjust to the softening real estate markets, a prominent bank stock analyst told a House panel on Thursday.

But to do that, the agencies would have to build up their corps of examiners to ensure that banks do not simply "roll the dice," to recover from losses on their real estate portfolios, said Charles Cranmer, who follows banks for Shearson Lehman Brothers Inc.

Staffing Problem

"Regulatory agencies are woefully understaffed and are losing good people daily to the private sector," he said. "The cost to taxpayers now of a fully staffed corps of examiners would be more than offset by the money saved in loan losses down the

Analysts Expecting FDIC to Push Premiums Well Above 15 Cents

By BILL ATKINSON

WASHINGTON — Following hints from Federal Deposit Insurance Corp. Chairman L. William Seidman that banks' premiums could go higher than expected next year, several industry analysts now say the industry should expect a substantial increase – perhaps approaching the FDIC's legal limit of 19.5 cents for each $100 of insured deposits.

The FDIC board is expected to consider at its meeting next Tuesday an increase in bank premiums above the rise of 3 cents per $100 of insured deposits slated to take effect next year. The scheduled increase will bring the premium to 15 cents per $100, and the FDIC's total assessment income to $3.75 billion from $3 billion this year.

Maximum Not Expected

Most observers do not expect the premium to hit the 19.5-cent ceiling, but they see an increase well beyond the 15-cent mark as all but certain. Each one-cent increase in the rate adds $250 million to the bank insurance fund, which is expected to need replenishment as banks suffer from a slowing economy.

Under the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, the FDIC can raise the premium as much as 7.5 cents in one year.

But the agency might shy away from adopting the 19.5-cent rate because it would be politically unpalatable, said Bert Ely, president of Ely & Co., a Alexandria, Va.-based financial consulting concern. "If it goes to the final amount, that may raise complaints of gouging," he said.

Mr. Ely expects the FDIC to raise the premium to 18 cents per $100. Then the law would allow another 7.5-cent hike in 1992.

Agreement on Higher Level

Robert Litan, a senior fellow at the Brookings Institution in Washington, also said he would not be surprised if the FDIC board raised the assessment above the slated 15 basis points, but he is hard-pressed to be more exact.

"It is hard to know whether

COMMENT/*By Joseph A. DiNuzzo*

Some Thrifts Converting Into State Savings Banks

Since the enactment of the Financial Institutions Reform, Recovery, and Enforcement Act in August 1989, several federal and state savings associations in states with savings bank statutes have begun to change their charters to state savings bank.

A state-chartered savings bank is a hybrid between a commercial bank and a savings and loan association, with a mixture of commercial banking and thrift lending and investment powers.

Historically they have been insured by the Federal Deposit Insurance Corp. and regulated by the FDIC and the applicable state chartering authority.

The savings-bank charter alternative has become popular, in part, because of the thrift law's elimination of the Federal Savings and Loan Insurance Corp. and the transfer of thrift insurance responsibilities to the FDIC under the Savings Association Insurance Fund.

Some states with savings bank statutes require that institutions be insured by the FDIC to be eligible to become savings banks. Because all federally insured thrifts are now insured by the FDIC under SAIF, they may qualify to convert to savings banks under the applicable state statutes.

> **"The savings-bank charter alternative has become popular, in part, because of the thrift law's elimination of the Federal Savings and Loan Insurance Corp.**

After conversion, the savings bank is subject to regulation by the state banking authority and, ordinarily, the FDIC.

Pioneer Federal Savings Bank, a $680 million-asset institution in Lynnwood, Wash., recently received what we believe was the first post-FIRREA approval by the Office of Thrift Supervision of a savings-bank charter conversion.

The conversion was facilitated by the strong capital position of Pioneer and the active cooperation of the state supervisor and his office in reviewing the application.

The supervisor's office and the FDIC conducted a joint examination of Pioneer. Before the regulatory examination, the Pioneer stockholders met and voted to approve the charter conversion.

Other Conversions in Progress

Several other savings associations in the Washington also are in the process of converting to a state savings banks.

Federal law does not prohibit a savings institution from converting to a state-chartered savings bank.

In fact, a provision in the thrift law specifies that the five-year moratorium on conversions from the SAIF to the Bank Insurance Fund shall not be construed to prohibit a savings association from converting to a bank charter if the resulting bank remains a SAIF member.

FDIC Status Is Same

Upon converting to a state-chartered mutual savings bank, the deposit insurance status of the institution does not change. Thus, the eligible deposits held at the institution continue to be insured under SAIF and the institution must continue to pay assessments to the FDIC for SAIF insurance.

The applicable state regulatory authority and, ordinarily, the FDIC become the primary regulators of the institution, replacing the OTS.

Also, the institution may remain a member of the Federal Home Loan Bank System, assuming continued compliance with the qualified thrift investment requirements.

The staffs of the OTS and the FDIC have acknowledged that such conversions are permissible, with the caveat that policy implications would arise if the converting institution has safety and soundness problems.

OTS Application Required

With respect to the termination of its current charter, an institution must file an application with the OTS. No formal conversion-related application must be filed with the FDIC. State and FDIC examinations of the institution, however, usually are required before the final approval of the conversion.

Ordinarily, the applicable state law requires the adoption of a plan of conversion by a majority of the members of the institution's board of directors and approval of the conversion by a majority of the stockholders or members of the institution.

The advantages in converting to a state savings bank may include the benefits of being regulated and supervised by a regulator in the institution's home state, reduced costs in examination and supervisory fees, and more favorable lending and investment powers.

Charter flips to a state savings bank also do not require an institution to recapture any portion of its bad-debt reserve.

In addition, in situations in which the converting institution is owned by a savings and loan holding company, the conversion process is further simplified because of the ease by which a vote of the stockholders, namely the holding company, may be obtained.

Higher Capital Requirements

One possible disadvantage in converting to a state savings bank is the higher capital requirements imposed by the FDIC. The FDIC presently requires a primary capital ratio of 5.5% and total capital of 6%. These contrast with OTS core and tangible capital requirements of 3% and 1.5% respectively.

The risk-based capital requirements of both the FDIC and the OTS are essentially the same. The FDIC, however, has a two-tiered phase-in of the risk-based capital requirements, unlike the OTS, which has an interim phase-in requirement of 6.4% until Jan. 1, 1991, when the OTS and the FDIC both will enforce the 7.2% requirement.

A Regulatory Test

An additional issue to address in connection with such a charter conversion is whether the FDIC will deem the institution to be a savings bank under the Federal Deposit Insurance Act and thus consider the institution a state nonmember bank, so as to come within the primary regulatory jurisdiction of the FDIC.

> **"The advantages in converting may include being regulated and supervised in the institution's home state and more favorable lending and investment powers."**

The test under the FDI Act in this respect is whether the applicable state law imposes "special requirements on such banks governing the manner of investing their funds and conducting their business."

If the FDIC determines that the institution does not so qualify, then the institution would continue to be deemed a savings association, and thus would continue to be regulated by the OTS.

Indiana recently passed a law permitting the conversion of mutual federal and state savings associations to Indiana mutual savings banks. The law becomes effective July 1, 1990.

Other States Consider Change

Also, New Jersey, Wisconsin, and Illinois, among others, are in the process of considering either savings bank charters or charter conversion provisions.

Charter flips to a state savings bank may not be available or advisable for all savings associations, but those that are eligible for such a conversion should give some thought to the option. ☐

Rose Wins Jeers, Cheers for Blast At Greenspan Call for More Capital

To the Editor:

I'm surprised that in 1990 a commentary such as Sanford Rose's July 24 article regarding bank capital ["For Shame, Chairman Greenspan!" on page 1] is deemed worthy of printing.

I've been a bank regulator, both state and federal, for 34 years, and I've never seen a bank fail because of too much capital.

I've seen them fail because of inadequate capital, and that's the point: The greater the risk in an institution, the more capital is required.

Time and time again, bankers want to leverage their minimal equity capital to the point that a minor downturn in the economy leaves them with insufficient capital to absorb loan losses.

Safety and Soundness

I also know that when investors and shareholders have sizable investments in a bank they take a special interest in safety and soundness.

Maybe we should go back to requiring shareholders to be subject to a mandatory call for capital contributions in time of need. That way, the taxpayers won't need to have their checkbooks handy.

Thomas K. Desch
Senior Vice President
Federal Reserve Bank
Philadelphia

To the Editor:

As a frequent reader of Sanford Rose's columns in the *American Banker*, I was particularly impressed with the July 24 commentary on Alan Greenspan's proposal for raising bank capital.

As Mr. Rose suggested, its likely effect is to cause bank managements to take yet greater risks in order to achieve the yields necessary to justify and sustain higher capital levels.

This seems to me to be the same mechanism that caused the massive losses in the savings and loan industry – managements, abetted by the easy availability of federally insured funds, seeking higher and higher yields to compensate for mounting losses on earlier risks.

There is, in my view, no way to address this problem within the current system. Your views on Alan Greenspan's approach suggested to me that my own proposal for a privatized deposit insurance system, utilizing the capital of the banking industry, would be of some interest.

Privatization offers a mechanism for introducing the right kind of market discipline into the deposit insurance system and forcing unproductive capital out of the banking industry.

SAS Taps Morgan for Buyout of Lorenzo's Stake in Continental Airlines

By JED HOROWITZ

Morgan Guaranty Trust Co. is advising Scandinavian Airlines System on its buyout of Frank Lorenzo's stake in Continental Airlines Holdings Inc., according to spokesmen for the bank and the buyer.

SAS will invest $50 million, about $27 million of which will go to the controversial Mr. Lorenzo in return for his stepping down as head of the airline.

The SAS mandate, while relatively small, represents something of a coup for the J.P. Morgan & Co. unit in a climate not too conducive to dealmaking.

Role in IBM Transaction

Just last week the bank emerged as an adviser to IBM Corp., which plans to sell most of its low-technology businesses to Clayton & Dubilier for a price believed to exceed $2 billion. Morgan does not have the sole advisory mandate in the IBM transaction, but is expected to be one of three lead banks financing the IBM buyout.

The SAS transaction is not expected to require bank financing, said Charles Dumas, a managing director in the bank's mergers and acquisitions division.

Morgan, which has been working on the airline deal for more than a year, previously advised SAS on its unusuccessful bids for a portion of Aerolineas Argentinas and British Caledonian Airways, Mr. Dumas said.

Lorenzo's Contract a Factor

SAS will buy Jet Capital Corp., a company that holds 2% of Continental Airlines' capital and is 48% owned by Frank Lorenzo. The European airline – which is 50% controlled by the governments of Sweden, Denmark, and Norway – is paying about $20 million for Jet and $20 million to buy out Mr. Lorenzo's five-year contract.

The SAS bid is not expected to require bank financing.

Mr. Lorenzo – whose empire once included Eastern Airlines, now in Chapter 11 bankruptcy proceedings – will receive about $27 million from the transaction, Mr. Dumas said.

SAS also is injecting about $10 million into Continental, a company formerly known as Texas Air Corp. SAS, which already owns 9.9% of Continental, will emerge with 16.8% of stock and 18.4% of voting control if the purchase wins approval from the U.S. Department of Transportation and from Mr. Lorenzo's approximately 90 partners in Jet Capital.

The purchase price of about $15.30 per share is well above the $4.50 at which Continental's common stock was trading before the deal was revealed in Thursday's edition of *The Wall Street Journal*. SAS, a long-term client of Morgan, probably will fund the purchase out of its current treasury, Mr. Dumas said. SAS officials did not return calls for comment. □

Day of Reckoning Nears for Interest on High-Yield Debt

Continued from *page* **1**

creasing through 1995, billions of dollars of these PIKs and zeros have to begin paying interest in cash. In addition, billions of dollars worth of junk bonds carrying resettable coupons will get new rates in 1991 and 1992.

All these factors will significantly increase the cash interest costs of many companies that were taken private or recapitalized in the 1980s. When the interest payments kick in, some companies' coverage ratios will fall to potentially troubling levels that could put them in violation of loan covenants, or worse, bankers and analysts warn.

The silver lining for banks is that many of these securities trade at a discount, and many companies in solid financial shape will be coming to banks for refinancing, since the new-issue market in high-yield bonds is nonexistent.

Opportunities for Borrowers

Any company that can buy its bonds back at a discount increases its equity – while reducing overall indebtedness – by booking the gain on the difference between the retirement price and par, noted Kingman Penniman, senior vice president at McCarthy, Cristanti & Maffei, a junk bond research firm.

Creditworthy companies will likely find banks willing to refinance, given the lenders' need to put funds to work in high-yielding assets, bankers say. RJR Nabisco Inc., for instance, is solving its PIK problem through a combination of financings that include a new $2.25 billion bank loan. And Santa Fe Pacific Corp. is speaking with its banks about a major refinancing.

Bankers, in fact, say they have targeted companies with junk bonds as potential lending opportunities, noting that any debt retired at a discount can greatly improve the credit. Companies that have paid down senior bank debt will have the easiest time arranging new bank loans, lenders said.

"If banks can see that it will enhance the credit, you'll see more of that," Mr. Penniman said.

Lenders Are Receptive

"Some companies are taking constructive steps to make them viable concerns. And banks are saying: 'If a company has a good track record and has made a significant effort to reduce bank debt, it behooves us to lend,' " he added.

"The willingess of banks to refinance is a function of how well a company has done," said Mark Gold, a vice president at Chancellor Senior Secured Management Inc., a mutual fund that invests in bank loans. "If a company has paid off a lot of debt, they might find that banks may be willing to come in and take out the PIKs."

The idea behind noncash high-yield securities seems dubious in retrospect. The deals assumed that operating income would grow, and that asset sales would be successful.

Many deals crafted in the mid to late '80s used zero-coupon bonds or so-called cramdown securities – technically "merger debentures" that were distributed, or "crammed down" the throats of shareholders in lieu of cash for a buyout.

Use of the securities allowed acquirers to raise their bids without arranging more financing, since the bonds deferred cash interest for a number of years by paying in additional securities.

No Longer 'Academic'

But because many acquirers "never expected to be around five years later, it was sort of an academic issue," says a veteran LBO lender. It's no longer academic.

For companies like Viacom Inc. and Owens-Corning Fiberglas Corp. that are in solid financial shape, banks hungry for high-yielding assets are likely to target the outstanding PIKs for refinancing.

While many "trigger" dates don't kick in until next year, bankers and analysts say companies that have access to additional capital are not likely to wait until the bonds begin paying cash.

"They want to deal with it six to nine months before the things kick in," said one banker.

Coping with Event Risk

Santa Fe Pacific, for instance, has PIKs that don't start paying cash until 1992, but is moving now to deal with the "event risk" embedded in its balance sheet.

The Chicago-based company recently announced that it was exchanging $200 million of its $780 million PIK that becomes cash pay in 1992 for cash and common stock, and will call the rest of the tranche in October. The cramdown PIKs were issued as part of a recapitalization two years ago.

Analysts expect the company to arrange a new $400 million bank facility to call the bulk of the outstanding bonds.

Bank Debt Replaces 'Junk'

"Some of the new financing will be a bank facility," confirmed Robert Gehrt, a spokesman for the company. "We're in the process of negotiating that... We've met with them and they know what we're trying to do." The company's agent banks are the banking units of Chase Manhattan Corp., Chemical Banking Corp., J.P. Morgan & Co., and Security Pacific Corp.

"Companies are going to move before it becomes a problem," Mr. Penniman said.

For many companies, though, it will not be quite so easy. On the marginal deals that banks will not refinance, they may nevertheless have senior loans outstanding from the original transaction that could look much worse off with a PIK paying cash.

"For banks, it's a problem for weaker deals," said one lender to leveraged transactions. "There will be some opportunities, but on the whole I think it's a problem."

Timetable for Cash Payments

In 1991, about $1 billion in PIKs and $4.5 billion in zeros start paying cash interest, according to data from Salomon Brothers Inc. In 1992, a bit less than $1 billion in PIKs and around $3.6 billion of zeros become cash pay.

In 1993, the PIK figure jumps to $2.2 billion, while the amount of zeros skyrockets to just over $6 billion. In 1994, $1.485 billion in PIKs become cash pay, while a whopping $7.3 billion in zeros kick in. The figures assume that RJR Nabisco leaves outstanding $330 million of its 17% PIKs due in 2009 and $2.3 billion of its 17% PIKs due in 2007.

For resets, $3.2 billion of public and private junk bonds will be reset next year, $1.72 billion in 1992, then falling to $706 million in '93, according to Salomon Brothers.

Leveraged Roll Call

Leveraged companies with debt that becomes cash pay include: Jack Eckert Corp. – $345 million in zero-coupon bonds, May 1991; Owens Corning Fiberglas – $1 billion in zeros, December 1991; National Gypsum Co. – $847 million in zeros with 15.5% coupon, June 1991; and Viacom – $449 million in PIKs at 15.5% interest, June 1991.

Most of these companies will likely be able to refinance or meet their cash interest obligations, but companies like Southland Corp. – with $402 million in zero-coupon bonds that pay in cash next year – clearly will not.

And the increased risk of a recession stemming from the Middle East crisis could put pressure on cyclical companies, further tipping the marginal deals into potentially distressed situations, bankers warned.

Tarnished in Hindsight

The idea behind noncash high-yield securities seems dubious in retrospect. The deals were structured on the assumptions that operating income would grow, and that asset sales would be successful.

In the case of Interco Inc., which has $213 million in bonds that become cash pay in 1993, neither worked; it's clear that the company and its investment bankers were using a rose-colored calculator.

Banks began to target junk bond buybacks as a potential opportunity after Campeau Corp.'s failure sent the junk bond prices of many leveraged deals plunging. It's an opportunity to lend at leveraged pricing and with fees in the range of 300 to 400 basis points. □

Bankers Foresee 3% Capital Rule Stifling Growth

By LINDA CORMAN

ANALYSIS: *Follow-up on the news*

WASHINGTON — Federal Reserve Board officials insist most banks have little reason to contest its most recent minimum capital requirement, known as the 3% leverage ratio. But some bankers disagree as controversy lingers over the usefulness of this method of measuring capital.

The standard, adopted Aug. 2 by the Fed – other regulators are soon to follow – requires the strongest banks to hold equity capital equal to at least 3% of assets. Bank health is measured on the regulators' Camel scale, an index based on capital, asset quality, management, earnings, and liquidity.

Lower-rated banks will have to maintain leverage ratios at least one percentage point higher than 3%.

The leverage ratio must be met in tandem with the broader, risk-based capital requirement. At the end of this year, for example, banks must meet both the 7.25% risk-based standard and the 3% capital requirement.

Problem Only in U.S.

Therein lies the rub for U.S. banks. While most major foreign banks must comply with risk-based capital rules, they do not have to worry about the additional requirement that, in effect, limits U.S. banks' ability to leverage their assets.

The 3% capital must consist of Tier 1 capital, defined as common equity and perpetual preferred. State institutions must deduct goodwill.

Much of the debate over the risk-based capital requirements occurred several years ago in anticipation of the international negotiations that culminated in the Basel accords, which made the risk-based requirements an international standard.

The Fed, however, has gone beyond the Basel agreement by adopting the 3% leverage ratio as well, which some domestic bankers say will hinder them in competition with overseas institutions not equally restricted.

Problem for Some Banks

U.S. bankers also argue the 3% leverage ratio prevents a bank with a large portfolio of low-risk assets from taking full advantage of the risk-based capital standards.

Beyond the dispute over the leverage ratio, analysts say banks already are on edge. To meet higher capital minimums,

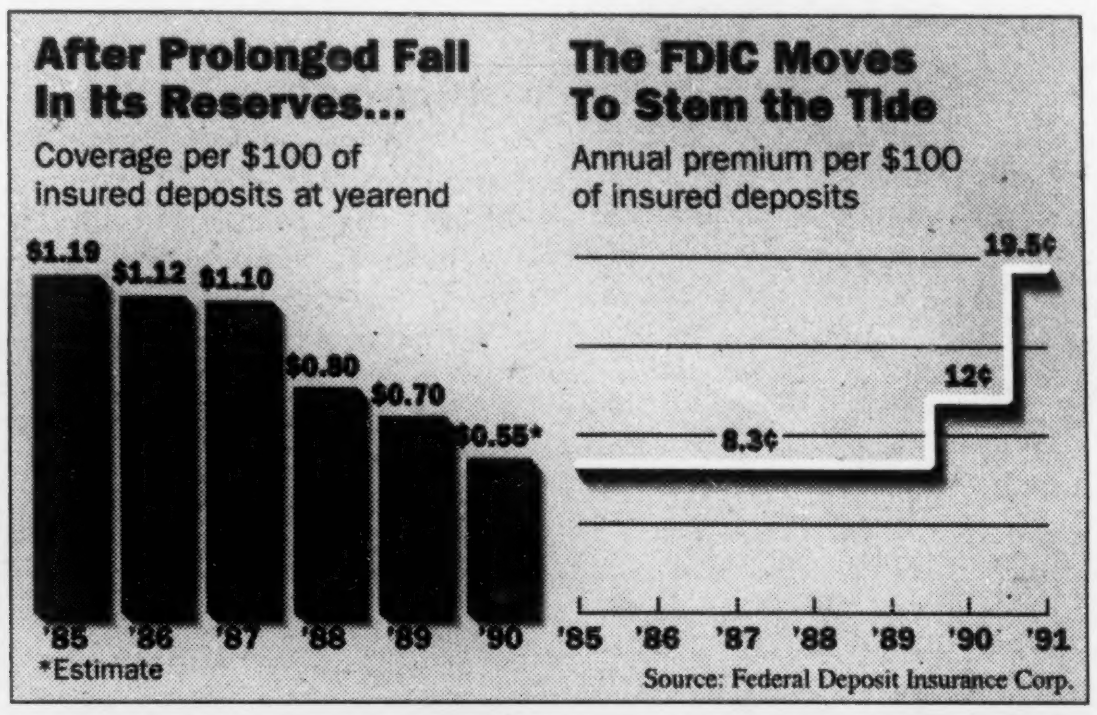
FDIC Premiums to Skyrocket 63%

Insurer Votes Largest Allowable Increase for 1991

By BILL ATKINSON



After Prolonged Fall In Its Reserves...
Coverage per $100 of insured deposits at yearend

The FDIC Moves To Stem the Tide
Annual premium per $100 of insured deposits

*Estimate

Source: Federal Deposit Insurance Corp.

WASHINGTON — Moving to replenish the dwindling bank insurance fund, the Federal Deposit Insurance Corp. board voted Tuesday to raise bank premiums next year by a record 63%.

The proposed increase – the maximum allowed in a single year – is to 19.5 cents for every $100 of insured bank deposits in 1991. The 1990 rate is 12 cents per $100.

In a unanimous vote for the 19.5-cent rate, the five-member FDIC board superseded a scheduled 3-cent rise that had been mandated by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989. The higher rate for next year would become official after a 30-day period for public comment.

7.5 Cents More in 1992?

The FDIC has authority to consider another 7.5-cent rise in the rate to take effect in 1992.

The move came after a month of hints from FDIC Chairman L. William Seidman and other officials that a premium hike beyond the scheduled 3 cents per $100 was in the offing. While the increase will shore up an insurance fund that is at an all-time low relative to the deposits it covers, bankers and industry analysts have noted that higher insurance premiums will mean lower profits.

But a study by the FDIC staff concluded that the 7.5-cent assessment increase "would have a minimal impact on current industry capital levels." Commercial banks with deposits backed by the bank insurance fund had $224.7 billion at yearend 1989.

The increase in the premium will affect only commercial banks, which since 1989 will have seen a 135% boost in their premium rates, from 8.3 cents to 19.5 cents. Thrifts backed by the savings association insurance fund, which now pay 20.8 cents per $100, are to pay 23 cents next year.

Impact on Bank Costs

At the 19.5-cent premium level, banks insured by the FDIC's bank fund face a $1.1 billion in-

Major Banks Seeking to Calculate Profitability of Products, Clients

By RICHARD LAYNE

In an attempt to bolster stock prices and allocate capital more effectively, major banks are building sophisticated information systems that measure the profitability of individual products, customers, and lines of business.

While many sizable banks can measure profitability companywide, only a handful have taken the next, crucial step: installing systems that measure the risk-adjusted return on equity for business units. With such systems, banks can manage their enterprises with the same eye to unit costs and dead wood that a manufacturer has.

About six of the nation's 20 largest banks have already developed such systems, including Security Pacific Corp., Bankers Trust New York Corp., First Chicago Corp., and Mellon Bank Corp., according to James M. McCormick, president of the First Manhattan Consulting Group, New York. Another eight or so, including Chase Manhattan Corp., Chemical Banking Corp., and PNC Financial Corp., are in the midst of de-

Global Data: U.S. Banks In Retreat

By JOHN EVANS

LONDON — Plagued with rising credit problems and worldwide concern about the health of the U.S. banking industry, American banks staged a major retreat from international credit activities in the first quarter, according to the Bank for International Settlements.

U.S. overseas banking assets fell $47 billion, or 8%, to $550.8 billion from the period ended Dec. 31, the Basel-based central banking organization said in a report prepared for release today. Foreign borrowings of U.S. banks declined $36 billion, or 6%, to $611.2 billion.

The BIS said the reduction was the sharpest it every recorded, surpassing a 4% decline of U.S. banking assets overseas and a 3% decline in liabilities in the quarter ended June 30, 1989.

All Areas Involved

The scaling-back of the international activities of American banks was worldwide and involved "all geographical areas and included both interbank and final lending business," the BIS said. The reduction in the first quarter reflected "the grow-

COMMENT / *By Gail Patelunas*

Regulators Examining Risk In Asset Sales with Recourse

Presently, banks and savings associations do not follow the same practices in reporting asset sales with recourse for regulatory reporting nor in calculating capital adequacy. For both banks and savings associations, the divergence between regulatory reporting and capital requirements presently requires capital for recourse contingencies twice for the same institution.

An allowance is established for estimated credit losses at the time of sale, and capital is generally required for the off-balance sheet recourse contingency as if the assets sold were still on the institution's books.

These treatments impact competition, pricing, and efficiencies of the secondary market for mortgages.

This article will look at how recourse is treated by banks and savings associations for regulatory reporting and capital adequacy purposes and some of the issues presented by these treatments.

Positions Under Review

The regulators are in the process of rethinking their position on the treatment of asset sales with recourse, given the convergence of savings association regulations with those for banks and the Financial Institutions Reform, Recovery, and Enforcement Act mandate for the federal thrift and banking agencies to establish uniform regulatory accounting standards.

The Federal Financial Institutions Examination Council recently issued a request for public comment on recourse arrangements. The paper addresses a wide range of recourse arrangements, regulatory reporting requirements and the capital ramifications. Issues covered include:

- When is a sale with recourse a sale?
- When is it a financing?
- How does recourse affect the amount of capital required to support the activity?
- Should regulatory reporting differ from generally accepted accounting principles in this area?

Comments received in response to this request will ultimately affect the way in which asset sales are reported for regulatory purposes and the amount of capital required for the recourse contingency.

Risks Taken in Early 1980s

Prior to the adoption of risk-based capital guidelines, capital requirements for banks were only levied against balance sheet assets. Formalization of bank capital guidelines in the early 1980s encouraged management to take risks off the balance sheet, thus spawning new products and variations of securitization and asset sales with recourse.

This article addresses recourse as a credit enhancement only. Many other forms of recourse exist to protect the investor from such things as interest rate risk and risks stemming from natural disaster.

Heretofore, savings associations' capital requirements were based on liabilities and other risk factors, rather than on assets and the attendant credit risks. Savings associations took advantage of securitization to restructure their balance sheets and stabilize and grow earnings through risk-controlled arbitrage.

Mortage-Backed Securities

The securitization market has grown substantially in the past decade providing a liquid secondary market for mortgages on one- to four-family homes. The volume of mortgage-backed securities has grown from $373 billion at year-end 1985 to $859 billion by the third quarter of 1989, or more than 238%, compounded annually.

Regulators have recognized risks presented by the growing volume of recourse assumed during the securitization process and have taken steps to measure it and require capital for the credit risk it presents. In this effort, bank call reports have been modified by adding supporting schedules to capture information regarding the amount of loans sold each quarter and the amount of recourse retained by the selling institutions.

In all but limited situations, banks do not follow generally accepted accounting principles in reporting asset sales with recourse for regulatory reporting, nor in calculating capital requirements. Under generally accepted accounting principles, assets sold with recourse can be removed from the balance sheet provided certain requirements are met.

> **"Regulators have recognized risks presented by the growing volume of recourse assumed during the securitization process and have taken steps."**

However, under regulatory reporting for banks, if a sale results in the retention of recourse, the transaction is treated as a financing for regulatory reporting; the asset is not removed from the balance sheet. The Call Report instructions specifically state that this treatment is "for purposes of . . . determination of capital adequacy."

Secondary Mortgage Markets

One major exception to this rule exists for the sale or swapping of mortgages to one of the federal or federally-sponsored agencies. In such instances, the reporting bank may account for the transaction as a sale for regulatory reporting purposes, thereby removing the mortgages from the balance sheet even if risk is retained. (Where no risk is retained, securitized mortgages can reduce the amount of capital required under the risk-based guidelines from 50 to 20%, or even to zero, based on the weight assigned to the security.)

During the development of the secondary mortgage markets, banks soon found that the best prices could be obtained if recourse was retained for 100% of the mortgages, since the securitized assets were still treated as a sale for regulatory reporting purposes.

Privately issued mortgage-backed transactions also may be accounted for as a sale for regulatory reporting, depending on the structure and amount of risk retained. If the selling bank retains recourse representing less than a "significant risk of loss," the transaction is reported as a sale for regulatory reporting purposes, and the mortgages are removed from the balance sheet.

A "significant risk of loss" exists when the maximum contractual recourse exposure retained by a bank exceeds its estimated probable loss. Many private deals do not meet the test for treatment as a sale because the recourse retained is several times the amount of the expected losses.

Capital Requirements for Loans

For regulatory capital requirements, removing assets from the balance sheet reduces capital requirements for the leverage ratio which is calculated using balance sheet assets. However, recourse retained on mortgages sold requires the selling bank to hold capital for the entire amount of loans sold under the risk-based capital ratio as if the loans were still on the books.

If the security is held by the securitizing bank, it is not required to be capitalized in addition to the underlying mortgages. However, if the security is subsequently sold, capital is required to be maintained by both the depository institution that securitized the loans with recourse, and the depository institution purchasing the security. This is referred to as "double counting," that is, the original mortgages now require capital twice within the banking system, by the holder of recourse and by the purchaser of the security.

In addition, the diverging treatment of recourse under generally accepted accounting principles and for capital adequacy purposes is the equivalent of requiring capital twice for the same bank. A number of large players in the residential mortgage market are publicly reporting banking organizations using generally accepted accounting principles.

Under GAAP, a bank's obligation under the recourse arrangement is estimated and a allowance is established for this contingency at the time of the sale. However, this allowance for loss no longer counts as capital under the new risk-based capital calculations.

Under the capital requirements, capital is required to be held for recourse on the securitized assets. Therefore, under GAAP, a charge to income is taken to establish an allowance for the recourse contingency, but capital is still required to be maintained.

Savings Associations

Savings associations are required to follow generally accepted accounting principles in regulatory reporting for asset sales with recourse. Like banks, assets sold with recourse can be removed from the balance sheet, thereby reducing capital for the leverage requirement. And, like banks, savings associations must hold capital for recourse provisions under the risk-based capital framework.

However, the capital requirement for savings associations is slightly different from that for banks. The leverage requirement is somewhat easier for savings associations to meet, given their ability to report sales with recourse in accordance with GAAP, regardless of whether they are to agencies or without a significant risk of loss.

Banks are only accorded this exception in limited instances. Savings associations are required to maintain risk-based

Chemical Chief: Shake-Up Gives More Responsibilities to Hartigan

To the Editor:

Chemical Banking Corp. would like to lodge a strong protest over a reference to one of our senior executives, Maurice H. Hartigan II, in an article on Aug. 9 ("Younger Executives Gain in a Shake-Up at Chemical," page 1).

The article said that Mr. Hartigan became an "apparent also-ran" under a realignment of Chemical's top management and implied that his duties were changed because Chemical's real estate lending is "troubled." Both contentions are incorrect.

Under Mr. Hartigan's leadership, Chemical reduced its real estate lending by 22% since 1988. Mr. Hartigan also shifted Chemical's focus away from construction lending, which is now the most troubled part of the market, toward lower-risk types of lending and advisory activities. Recent developments in the real estate market clearly prove that his conservative strategy was correct.

Rather than becoming an "also-ran" under the new structure, Mr. Hartigan has assumed much broader responsibilities as the No. 2 executive in charge of Chemical's New York region, including our consumer, middle market, and private banking businesses, as well as real estate.

Big Banks Seek Deeper Data on Profitability to Aid Stock

Continued from *page* **1**

veloping them, he said.

The growing importance of these systems has not gone unnoticed on Wall Street. Analysts say that banks lacking these systems are more likely to stay in losing businesses and fail to back potential winners.

These profitability systems, which cost millions of dollars to design and install and can require a bank to solve some knotty accounting problems on allocating equity, are the managerial tools of choice for a new breed of executive.

An Eye on Risk and Reward

Observers call this group "systematic managers," for their focus on managing businesses based on apples-to-apples comparisons of such performance criteria as risk-adjusted return on equity for business lines.

Members of this new class say they can strengthen their companies' return on equity by as much as two percentage points. The average return on equity for all banks last year was 7.79%, while in 1988 it was 12.79%. Return on equity, or ROE, is a significant determinant of stock value.

The need for profitability systems is spurred by the growing complexity of the banking business. A bank operating 100 lines of business in several states must be able to optimally price products and decide on a quantitative basis, primarily ROE, which business to exit or build up.

"Banks that have this capability have a leg up on understanding their resources," said Arthur P. Soter, a banking analyst with Morgan Stanley & Co.

"That doesn't guarantee success, but it increases the likelihood that they are putting their money to work in the better opportunities."

Mr. Soter said the use of a profitability-measurement systems was a key factor in the recent turnaround of Detroit-based Comerica Inc.

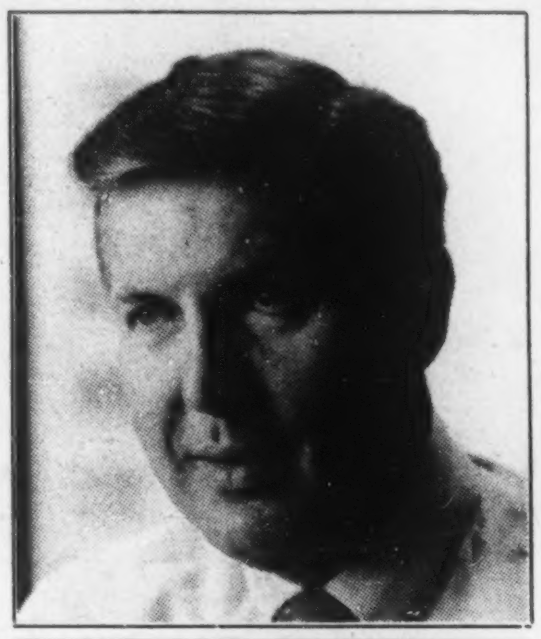
"Not having such a system hurts banks," said Diogo B. Teixeira, a banking technology specialist with McKinsey & Co. If "you don't know your product profitability, it's hard to make the right decision on how to price a product or whether to drop out of a business."

Setting the Standards

At a meeting last month in San Diego, Security Pacific's top 85 managers sat on the edges of their seats while executives announced which of the bank's 49 major businesses reached the goal of a 20% ROE. Fourteen businesses did not. The result: Security Pacific plans to announce the sale of some units and will restructure others.

For Security Pacific, the focus on ROE, derived via the profitability system, is new. "We've never been able to monitor these businesses as well before – you had some gut feelings, but you couldn't prove them," said John Singleton, the new chief operating officer at Security Pacific.

"In manufacturing, you live and die by unit costs and product costs," said Mr. Singleton. "Banking never had to do this."



"You had some gut feelings, but you couldn't prove them."

John Singleton
Security Pacific Corp.

A Heavyweight Group

Mr. Singleton is one of the new systematic managers, a group that includes Edward Miller, vice chairman of Manufacturers Hanover Trust Co., New York; Terrence A. Larsen, chairman of CoreStates Financial Corp., Philadelphia; and Anthony P. Terracciano, who used such a system at Mellon before taking the top job at First Fidelity Bancorp, Newark, N.J.

Executives at Security Pacific believe the the system can increase ROE by 1.5 to 2 points. "If you are going to be a powerhouse acquirer, you have to drive your stock price up," said Mr. Singleton.

Security Pacific is not alone. At CoreStates, which finished its profitability system last year, hundreds of financial analysts, wholesale bankers, and even the chairman, Terry Larsen, check the system regularly, monitoring the performance of customers, business units, and products, according to Robert N. Gilmore, executive vice president.

Other banks must follow the example of these pioneers, according to observers.

"How can you manage without knowing how profitable your businesses are?" asks Mr. McCormick of First Manhattan Consulting .

Mr. McCormick said the first profitability system was installed in 1983, although he declined to name the bank.

Mr. McCormick said that in a sizable bank holding company with some 100 businesses, a third have a high ROE; a third have an ROE from 10% to 20%; and a third have an ROE of less than 10%.

"Once you know the ROE for lines of business, you behave fundamentally different – you know whether to fix, restructure, or wind down," he said. "That's the world that allows for the systematic management for shareholder value."

While few banks have systems that measure return on equity, most can measure profitability to some degree.

In a 1989 survey by the accounting company Price Waterhouse & Co. of 115 of the 250 biggest bank holding companies, all but a few said they had at least some ability to measure the organizational unit profitability, whether through return on assets, net income, or performance to budget. The study said product and customer profitability systems were far less common.

The Price Waterhouse study did find that two out of every three bank holding companies with more than $1 billion in assets said they planned to install or enhance their profitability system within two years.

Accounting Needs Work

Building profitability systems is an enormous undertaking. First, the bank must hammer out the accounting practices: how to allocate equity, funds transfer pricing, and goodwill, to name just a few.

Then it must overcome the technological hurdles. A profitability system sits on top of a bank's transaction processing systems. It must snatch up-to-the-minute information from scores of systems to create individual balance sheets and income statements on balances.

Then the data gleaned from the bank's operations must be stored in such a way that managers can easily retrieve it.

Mr. Soter and others point to the unique problems of banks as compared with other industries that has slowed this progress: a lack of separation between lines of business, issues in transfer pricing, the allocation of capital.

ISSUES

Machine Dialing Speeds Collections

By KAREN GULLO

NEW YORK — Using technology that automates telephone dialing, banks have discovered that they can greatly speed collection operations, reduce labor costs, and increase their telemarketers' productivity.

Banks began installing automatic or "predictive" dialing systems in the mid-1980s to make collections and telemarketing operations more efficient. Such systems can be programmed to dial several hundred phone numbers an hour and route calls and customer information to operators.

In Massachusetts and a few other states, any company using an autodialing system for telemarketing must buy lists from the phone company of consumers who do not want to receive the calls. So far, banks that use such systems for collections are not covered by such legislation.

200 Bank Installations

Davox Corp., a Billerica, Mass.-based major provider of such systems, said it has installed autodialing systems at about 200 U.S. banks. Citicorp is one of its largest customers, with systems for its nationwide Visa and MasterCard account collection network. Last spring, the banking company ordered $1.4 million worth of Davox products for its regional collection center in Erlanger, Ky.

A typical system uses personal and mainframe computers with a dialing device. The mainframe sorts delinquent files with customers' names, addresses, and phone numbers and sends them to the PC.

Contacting More People

The PC is programmed with calling criteria that sort the accounts by area code and delinquency period. The information is passed to the autodialer, which begins dialing numbers in rapid succession and passing answered calls to operators.

"The system allows us to talk to more people," said William H. Haddock, collection manager in the credit card group at Star Banc Corp., Cincinnati.

His company installed its first Davox system in the loan collection department two years ago. With 5,000 delinquent accounts to contact each day, collections moved slowly; operators contacted two to five customers an hour. The automatic dialing system picked up the pace to 20 to 35 calls an hour. ☐

Why Did Fed Finally Reject Northeast Deal?

By GORDON MATTHEWS
and BARBARA REHM

NEW YORK — The Federal Reserve Board rejection of Bank of New York Co.'s foot-dragging bid to acquire Northeast Bancorp probably stifles what life was left in the moribund bank merger and acquisition scene.

The question some observers are now asking is whether the Fed has raised the capital requirement for bank mergers.

"I doubt if too many tears are being shed at Bank of New York over this, but the message here may be that regulators right now will not approve any deal in which capital ratios are weakened, even when they don't go below the minimum limits," said Felice M. Gelman, a bank analyst at Dillon Read & Co.

ANALYSIS: *Follow-up on the news*

Meanwhile, Northeast, based in Stamford, Conn., signaled that it is not yet ready to give up the fight. It asserted Thursday that Bank of New York deliberately filed an incomplete application with the Fed to ensure that the deal would be rejected.

'Breach of Contract'

"Northeast believes that the lack of a proper capital plan within the application constitutes a breach of contract, and it will decide within the next few days whether to pursue legal action," Frank J. Kugler Jr., its chairman, said in a statement.

"We were not asked by the Fed to submit a capital plan," responded a spokesman for Bank of New York. "Moreover, the management at Northeast saw this application before it went to the Fed, and we did not previously hear from them that it was incomplete."

The Fed operates mainly behind closed doors. So industry sources were unsure Thursday whether the Bank of New York order, released late Wednesday, signaled that the Fed is applying a higher capital standard to acquisition requests.

Reading Fed Intentions

"I think the Fed has been intensifying, but I'm not sure whether it is an increase or not," said a leading industry lawyer, who did not want to be named. "The Fed is clearly committed to high capital, but I don't think there is a specific level. I think they do it on a case-by-case basis."

About the only clear implication is that "the Fed doesn't like large cash deals," said Mark

WORK IN PROGRESS: Citibank's branch at 55 Wall St. was closed Thursday as Consolidated Edison toiled to restore power in the fourth day of a blackout in the heart of the financial district.

Citibank Works to Bring Accounts Up to Date After Generator Failure

By KAREN GULLO

NEW YORK — Citibank scrambled to update customers' accounts Thursday after bringing in additional generators to restore back-office computer systems for its New York City branches.

A power outage in New York's financial district has become an operational nightmare for the giant bank, affecting key computer systems supporting correspondent and retail banking operations and customer service.

The systems failure delayed posting of withdrawals and deposits to consumers' accounts, but the number of accounts affected could not be determined. Corporate accounts were affected to a lesser degree, bank officials said.

"We're doing catch up right now, but we're almost completely caught up," said Daniel J. Denaci, vice president in charge of retail banking for Citibank in south Manhattan. He said account activity had been posted through Tuesday.

Two Citibank branches, including one at 55 Wall Street, remained closed Thursday because power had not been restored three days after a fire destroyed a utility station operated by Consolidated Edison Co. in lower Manhattan. Customers were diverted to other branches in the area.

Operations for the retail and correspondent banking systems were disrupted Wednesday when a backup generator failed at the bank's downtown Manhattan processing site at 111

Fed Wire Disrupted, Is Moved to Backup Site

By JEANNE IIDA

NEW YORK — A backup generator at the Federal Reserve Bank of New York failed Thursday morning, disrupting the Fed's nationwide wire-transfer system and adding more confusion to a federal funds trading market already in turmoil following a blackout in Lower Manhattan earlier this week.

The Fed's wire network, which processes more than $900 billion in payments a day, opened two-and-a-half hours late as officials scrambled to move operations to a backup site 24 miles north of the city.

Payment Bottleneck

Corporate and interbank payments faced bottlenecks as the tedious process of linking users to the new site slowed operations well into the afternoon. The Fed Wire was expected to close after its normal 6:30 p.m. deadline, officials said.

"We're not out of the woods yet," E. Gerald Corrigan, president of the New York Fed, told a press conference at 4 p.m. Thursday. "What we are talking about are terribly complex systems."

However, Mr. Corrigan stressed he was encouraged by how the backup system was op-

Hanover Exiting From Sweden And Switzerland

By JOHN EVANS

LONDON — Manufacturers Hanover Trust Co. announced on Thursday that it is closing its branches in Switzerland and Sweden as part of a global restructuring of its wholesale banking business.

The move is consistent with a broad retreat by U.S. banks overseas in the wake of rising credit problems and international concerns about the health of America's banking industry. Though Switzerland has traditionally been considered an essential component for a global banking network, Hanover insisted the pullout will not damage its international operations.

Ten U.S. banks operate branches or subsidiaries in Switzerland, including Citibank, Bank of America, Morgan Guaranty Trust Co. of New York, and

Ameritrust Will Cut 780 Workers, Take Charge of Up to $18 Million

By NANINE ALEXANDER

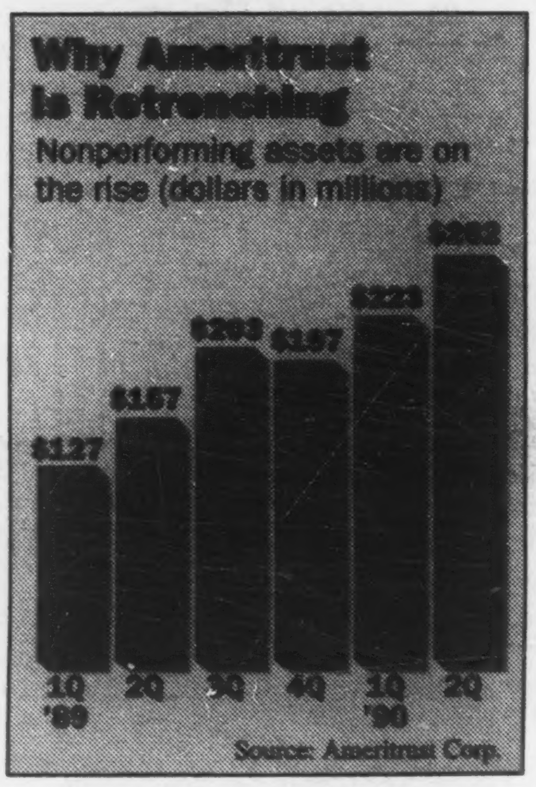
CHICAGO — Ameritrust Corp. announced Thursday that it will reduce its staff by 11.5% and take a charge of as much as $18 million against third-quarter earnings.

The Cleveland-based banking company also disclosed that it has signed a memorandum of understanding with the Office of the Comptroller of the Currency.

Lightest Regulatory Act

A memorandum of understanding is the lightest form of regulatory control; it involves a written declaration that a banking company intends to improve its business practices.

Most analysts were not surprised by Ameritrust's planned restructuring charge, but several said they were concerned about the OCC accord. "I don't think it restricts their operations," said Kenneth F. Puglisi, an analyst at Keefe, Bruyette & Woods Inc., referring to the OCC memorandum, "but it does send a negative signal."



Why Ameritrust is Retrenching

COMMENT/*By Angelo Mozilo*

Amendment Could Injure Low-Income FHA Buyers

The Federal Housing Administration's home-ownership program is intended to facilitate the delivery of mortgage credit to qualified borrowers. Over the years, this purpose has generally been well served.

However, due to the escalation of home prices in recent years, FHA financing has become unsuitable for many buyers in high-cost housing markets because of the unrealistically low loan limit – $124,875 – authorized by Congress.

To add to this problem there is an amendment to the 1990 Housing Bill (HR 1 180), currently wending its way through Congress, that would prohibit lenders from imposing different interest rates, discount points, origination fees, or other charges on FHA loans with different loan amounts.

Tiered Pricing Is Target

Ostensibly, the aim of the amendment, sponsored by Rep. Thomas Ridge, R-Pa., and Rep. Mary Rose Oakar, D-Ohio, is to help lower-income buyers. The proposed legislation would force lenders to make loans in lower-cost areas of the country and control fees charged by eliminating "tiered" pricing.

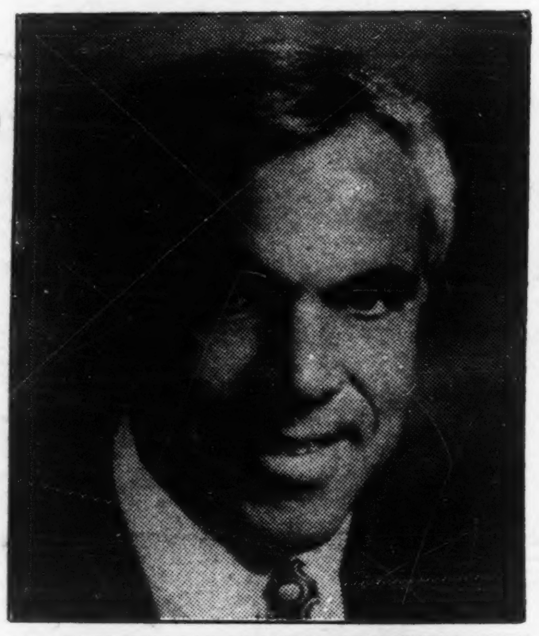
In reality, though, it is the customary tiered pricing methodology that has permitted lenders to make loans in economically deprived areas on a sound business basis.

Even if well-intended, as I believe this amendment is, this legislation is an attempt to legislate economics – an impossible task. The authors would make lenders charge the same percentage, regardless of the loan amount.

Unintended Results

This practice, without question, would result in pricing lenders out of those communities where FHA financing is an essential ingredient for the viability of the housing market. The Ridge-Oakar amendment would clearly have the effect of shutting off FHA housing credit to many who are seeking the opportunity of home ownership.

The reason is simple and straightforward: The cost of originating a loan is a dollar amount, not a percentage. Regardless of size, every loan requires the same documentation and time; all loans cost virtually the same amount to originate. This patent fact of economics is the key to understanding the fallacy of the proposed amendment.



> **"The true result of an amendment requiring lenders to adopt 'uniform' pricing would be far from uniform."**

Admittedly, if a borrower or a congressman does not understand that our origination costs are roughly equal regardless of the size of the loan, then the current method of pricing would appear unfair. However, the true result of an amendment requiring lenders to adopt "uniform" pricing would be far from uniform.

Rather, it would be grossly unfair. Consider the following: Under this amendment, the borrower of $120,000 would pay 12 times as much as the borrower of $10,000. No doubt, higher-balance borrowers are apt to find this difficult to swallow.

Some Basic Arithmetic

A higher number of "points" – the percentage of the loan amount – on lower-balance loans translates into roughly equal dollar amounts being charged by lenders. Let's look at some basic arithmetic equations.

Six points on a $20,000 loan, three points on a $40,000 loan, and one point on a $120,000 loan all add up to the same dollar amount – $1,200. So, under the current tiered pricing structure, each of these hypothetical borrowers pays the same dollar amount to cover the lender's cost – a cost that is about the same in each case.

The proposed amendment is based on the premise that by charging more for higher-balance loans, lenders can subsidize the cost of originating lower-balance loans. This theory, though, is not practicable. Consider that currently the origination fee for all FHA loans is capped by the Department of Housing and Urban Development at 1% of the loan amount.

Originations at a Loss

In effect, higher-balance loans are subsidizing lower-balance loans. However, even on the highest balance loan currently allowed under FHA, which is $124,875, FHA lenders are unable to cover their average origination costs with the current 1% cap. In 1998, the average net loss to originate each single-family loan, regardless of size, was $1,244.

With the origination of loans already operating at a loss, lenders rely on income from points to make origination of these loans economically viable. If a mandate to charge a uniform number of points on all FHA loans, regardless of loan amount, is enacted, the result will be direct subsidization of low-balance borrowers by higher-balance borrowers.

As such, lenders will have no choice but to increase interest rates or points across the board to ensure adequate yields from higher-balance loans to cover costs of originating lower-balance loans.

As the cost of higher-balance FHA loans are forced up, these larger and more profitable loans might be lost by the FHA program to conventional financing. Consequently, the FHA program would be put under even greater financial stress.

Program with a Social Purpose

FHA is unarguably a program with a social purpose – fostering home ownership. But there is nothing in its legislative history mandating direct subsidy from one class of borrowers to another class of borrowers on the pricing of these loans.

The current practice of tiered pricing, where a higher number of points is charged on smaller loans, is not an effort to discriminate against lower-income borrowers or to covertly discourage lending in certain neighborhoods. Lenders have adopted tiered pricing practices simply to cover the cost of originating lower-balance loans.

Forcing lenders to discriminate against their higher-balance loan customers will only hurt the very people the amendment's sponsors are trying to help.

Furthermore, a law that forces a lender to operate at a perennial deficit would be unconstitutional. Such a law would only force lenders to shut off the availability of housing loans to those seeking small balances, thus taking home ownership away from the very American families that FHA has historically been intended to help. □

Idea of Limiting FDIC Coverage Seen Threat to Banking System

To the Editor:

After having read Linda Corman's article "Putting Limits on Insurance: Is It Practical?" [Aug. 2, page 1], I felt a few comments were appropriate.

Congress couldn't pick a worse time to consider reducing or curtailing Federal Deposit Insurance Corp. coverage. Obviously, there is no confidence in the savings and loan industry. Confidence in the banking industry is also dwindling, so reducing the insurance would only result in further erosion of confidence in the banking system. It is critical for the country, and maybe the world, that the financial system of the United States remain strong.

Savings Would Suffer

Americans don't save enough at present. Reducing insurance coverage would surely cause disintermediation, thereby reducing the banking system's ability to finance capital investments. Also, lowering the insurance would cause people who can afford to save to seek other investment opportunities.

I would respectfully suggest the most prudent use of the peace dividend is clearly to satisfy the government's obligations with regard to the savings and loan bailout. If our children are to enjoy at least the standard of living they are accustomed to, we simply owe it to them to get our financial house in order.

Congress' Priority

We all know what the cure is — raise taxes and reduce expenditures. When will members of Congress make this their No. 1 priority rather than thinking about getting reelected? (Actually, that's probably one of the main reasons why we are in this position). If they only could hear President Kennedy once again: "Ask not what your country can do for you; ask what you can do for your country."

In conclusion, the key to a strong financial system is having confidence in the banking industry – and FDIC insurance just happens to be the cornerstone.

Reforming Mortgage Insurance

To the Editor:

An article your newspaper ran Aug. 2 on the overhaul of Federal Housing Administration mortgage insurance ["House Votes for Overhaul of FHA Mortgage Insurance," page 7] was incomplete in describing the Vento-Ridge amendment. Our amendment includes several meaningful reforms to maintain the safety and soundness of the FHA insurance fund.

The Bush administration's proposal and our amendment both meet a higher capital standard for the FHA fund, but our amendment does it in a manner that is less harmful to potential homebuyers. The Vento-Ridge amendment will restore FHA to sound financial footing without the adverse side-effects of the administration's proposal.

With young families finding it more and more difficult to purchase a home, it is imperative that we do not impose unnecessary obstacles to home ownership.

Rep. Bruce F. Vento
Democrat of Minnesota
Rep. Thomas J. Ridge
Republican of Pennsylvania

Editor's Note: The Vento-Ridge proposal, which would lower the initial FHA mortgage-insurance fee payable by homebuyers and spread the cost over the life of the loan, passed the House in late July on a vote of 418 to 2.

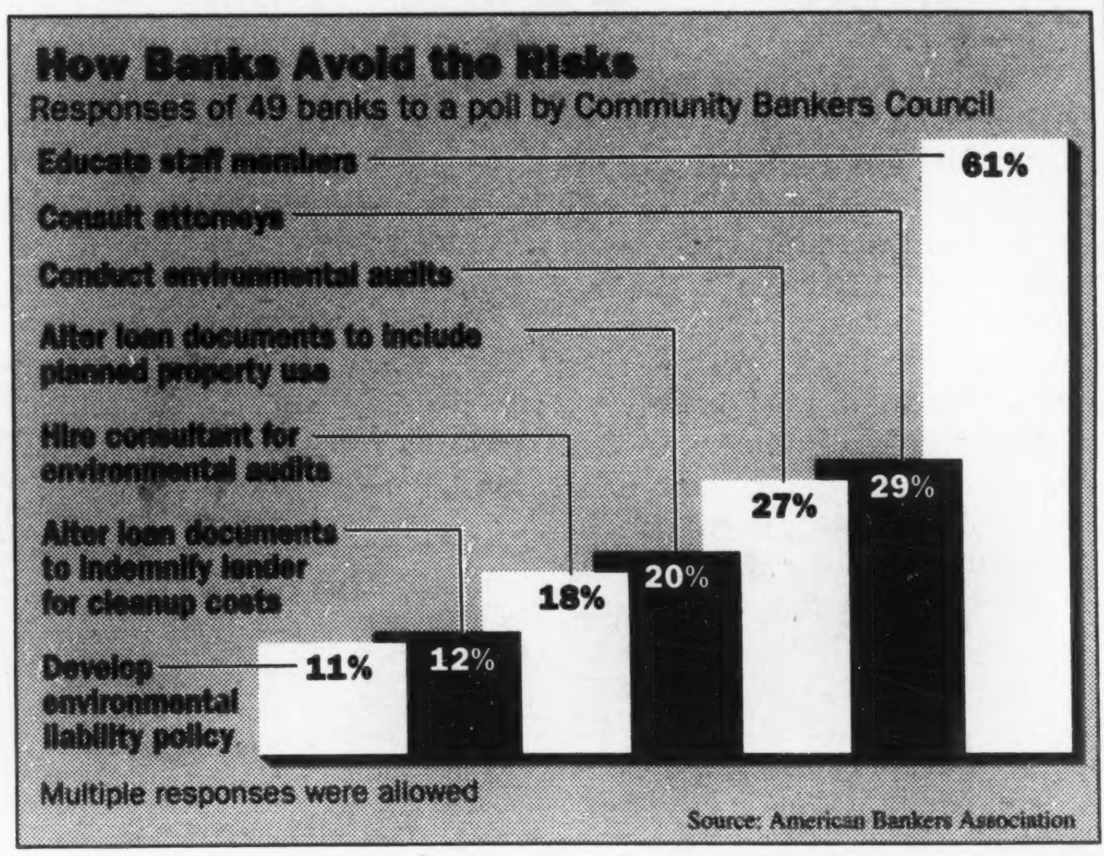
SMALL BUSINESS

Lenders Skittish over Cleanup Liability

By LAURYN FRANZONI
Special to the American Banker



Source: American Bankers Association

Concerns about environmental liability are prompting small-business bankers to alter their lending policies, according to a recent survey.

The 49 bankers who responded to a poll by the American Bankers Association's Community Bankers Council reported being "concerned" or "very concerned" about environmental liability. More than three out of four said they had changed their lending policies in some way to avoid it.

Banks can become liable for cleanups of contaminated sites in several ways under the Superfund regulations enforced by the Environmental Protection Agency. If the borrower is unable to pay for decontamination or is unable to repay a loan because of environmental liabilities, the bank may have to pay for the cleanup.

Conditions of Liability

A bank may also be liable for a cleanup if it exercises control over a borrower's board or influences management's daily operating decisions, if it forecloses on contaminated property and becomes the owner, or if its trust department owns or manages property as a trustee or executor.

Community banks with assets of less than $250 million appear to be most concerned about the potential threat.

"We have to look cautiously at any loan," said J. Bart Colwell, executive vice president of First State Bank, Brazil, Ind. "EPA is using Superfund to go after the deep pockets that a bank has when the borrower doesn't have the resources. Even government officials say people who never expected to be associated with the property will be."

Certain Businesses Shunned

Mr. Colwell said his bank has turned down some loan applications from dry cleaners, service stations, and manufacturing companies in recent months because of the potential risk. In one case, the bank backed away from an oil distributor whose business it had pursued for five years.

The biggest threat Mr. Colwell sees is a trend toward assigning liability to banks when they provide financial advice to their clients. "Lenders have been construed to be operators if they serve on the board of directors of the business," he said.

"In small communities like ours, a lot of what we do is provide financial advice," he said. "That could make us liable for the cleanup." First State is a $34 million-asset unit of First Financial Corp., which has $800 million in assets.

"It's scary when you look at the overall impact on economic development of small communities," Mr. Colwell said. In addition, he fears that loans made through Small Business Administration programs will be curtailed because of the agency's tradition of providing operating and management advice to its borrowers. Based on current legal trends, even the SBA could become liable for an environmental cleanup.

Strong Impact Seen

According to David Gohn, chairman of the ABA community bankers' council and president of West Plains Bank, West Plains, Mo., "The results of the survey emphasize how strongly environmental liability is impacting banks and their customers." The ABA did not ask members how much they have spent on cleanup activities.

The ABA reports that banks are already taking steps to protect themselves. Several respondents said they have consulted attorneys, arranged environmental audits, and redrafted loan documents.

Some banks have altered their loan papers to include borrower information about the loans and planned property use. Others have redrafted loan documents to have the borrower indemnify the lender for all cleanup costs, regardless of fault.

Even though a small number have made such changes to date, more than half of those surveyed plan to begin environmental audits and a third plan to revise loan documents.

Mr. Colwell of First State says all banks – and especially community banks – should be reviewing their exposure. "You've got to know what the borrower is doing with the property," he said. "Chances are, if he's producing anything, the property can be contaminated." Agricultural loans should also be examined, because chemicals used for fertilizers and other purposes are under increased scrutiny as pollutants.

Ms. Franzoni is a freelance banking reporter based in Springfield, Mo.

Debit Card Use In Britain May Outrun Checks by 2000

By JOHN EVANS

LONDON — British consumers will make more payments with debit cards than checks before the year 2000, according to an industry forecast.

The cards, which are essentially plastic checks, will account for more than four billion consumer payments in 2000, versus fewer than three billion via checks, predicted the Association for Payment Clearing Services.

The industry group, which is operated by Britain's major commercial banks, expects debit cards to emerge as the dominant force driving consumer banking business in Great Britain. Debit card transactions totaled 60 million last year. Some 13.5 million cards are in use, for a penetration of about 30% of the British adult population.

Checks Seen Peaking in '91

Check volume, whose growth has been slowing in recent years, is expected to peak this year or in 1991 at about 3.7 billion items before declining during the remainder of the 1990s.

Debit cards will also cut into the market for credit cards, held by about 40% of the adult population, the association said. Credit card transactions grew only 4% last year; debit cards may cause volumes to level off or even fall, the group said.

This trend may be accentuated by a recent antitrust ruling ordering banks to stop discrimination practices that have prevented retailers from offering discounts for cash transactions.

Use of Cards to Quadruple

Withdrawals through automated teller machines are expected to continue rising rapidly, reaching almost 1.4 billion by 2000, compared with more than 800 million in 1989.

Overall, transactions made with all types of plastic cards are likely to quadruple from 1.7 billion last year to about 6.6 billion in 2000, the group said.

Total transmissions of non-cash items, including direct debits from checking accounts for charges like utility bills, will grow about 5% annually, reaching 13 billion items by the year 2000, according to the association's research. The predictions were based on trends among the almost 90% of adults in Britain who now hold some form of bank or thrift account.

Spending patterns are expected to favor Britain's banks.

These spending patterns are expected to favor Britain's banks, which are facing rising costs in their credit card operations, industry analysts say. Growing numbers of customers are paying their card bills on time to gain free credit for a month.

While some banks here have begun to add annual charges for credit cards, they are also strongly promoting debit cards. Banks stand to make an estimated $750 million annually by processing debit transactions for retailers.

The main cooperative debit card system in Britain is Switch, whose chief operator is Midland Bank PLC. □

Securitization: Can It Work in Middle Market?

By SANFORD ROSE

Comment

As pointed out in a recent report in this newspaper, some banks have expressed an interest in securitizing middle-market loans. What are the obstacles to securitization of commercial as opposed to consumer loans? And how can these obstacles be surmounted?

Economic theory and common sense – unfortunately, the two don't always coincide – seem to hold that a market will not long exist if the inequality of information between buyers and sellers is too great.

An asymmetry of information between buyers and sellers causes a problem if two conditions hold: First, the seller has detrimental information about a product, say a loan, that he chooses to withhold from the potential buyer; and, second, the cost to the buyer of discovering the relevant information on his own is significant relative to the value of the product.

If sellers withhold information and buyers have no cost-effective way to obtain that information, a market cannot long be sustained. This is called the agency or adverse-selection problem.

There apparently is only a small agency problem when banks sell the loans of rated companies to other banks, thrifts, or pension funds. The buyer has access to the agency ratings at minimal cost in order to remedy his information disparity.

Role of Deal Managers

There is a somewhat larger, though still perhaps not an insuperable, agency problem when pieces of large, well-publicized leveraged buyout credits are sold down. The deal managers and the agent banks make it their business to clarify the nature of the cash-flow projections, thus eliminating the information asymmetries.

But there is a larger and perhaps formidable agency problem when banks sell pieces of less-publicized LBO deals, or when they sell middle-market commercial loans. How does the buyer know that he isn't getting a lemon?

If the buyer knows less about the credit than the seller and lacks the ability to bridge this information gap in a cost-effective fashion, shouldn't he demand a higher yield on the loan than did

RJR Loan Is Flop in Syndication

By STEVEN LIPIN

The general syndication of RJR Nabisco Inc.'s $2.25 billion bank facility is basically a failure.

While some bankers boasted that the $7 billion in commitments the company received reflected the willingness of commercial lenders to invest in RJR, agent banks had sold a mere $200 million as of Friday. That's out of a pool of roughly $1.4 billion that they are trying to sell off. Bankers in and out of the deal attribute the failure to the skimpy fees reoffered.

The general syndicate is set to expire Aug. 24, and banks will likely continue selling in the secondary market. Officials in the deal did not expect to sell much more of the deal before Friday's deadline.

'Not Too Pretty'

"A billion four went in and over a billion is coming out," said one syndicate official in the deal. "That's not too pretty."

While RJR is not directly affected, the figures are significant because many banks, reluctant to increase their exposure to highly leveraged transactions, will nevertheless be holding a greater portion of RJR loans than they had hoped.

Most do not want to retain more than $25 million to $50 million, bankers in the deal say. With concerns over credit quality from both regulators and shareholders, "the trend is to get fees up and risks down," one banker involved in the deal said.

Secondary Fees Blamed

And the fees are certainly generous in the RJR Nabisco deal. Not only are fees over 300 basis

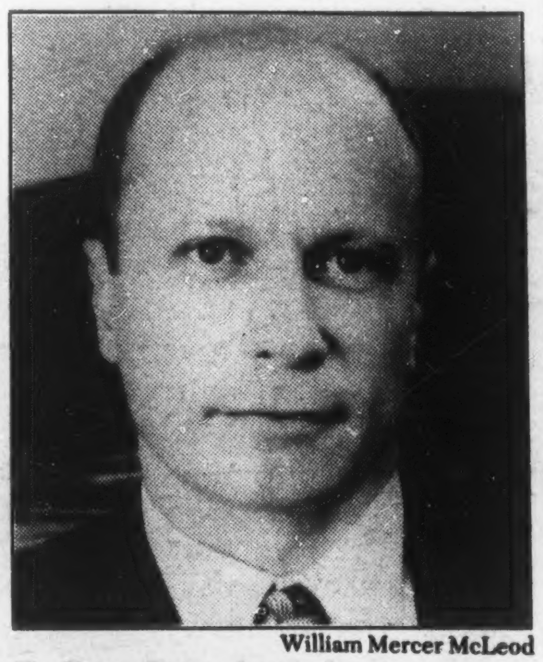
Gonzalez Seeks Ouster Of Vocal FDIC Critic

By BARBARA A. REHM



William Mercer McLeod

WASHINGTON — House Banking Committee Chairman Henry B. Gonzalez is seeking to fire the outspoken economist R. Dan Brumbaugh from a committee-sanctioned study of the Federal Deposit Insurance Corp.

Mr. Brumbaugh, a senior research scholar at Stanford University and one of three economists preparing a report for the House financial institutions subcommittee, has attracted considerable media attention in recent weeks to his argument that the bank insurance fund is technically insolvent and inadequate to handle a likely spate of bank failures.

Objectivity Questioned

Mr. Gonzalez said in an interview last week that Mr. Brumbaugh is unable to do an objective analysis of the FDIC because he has testified against the government in lawsuits against thrift managers.

"I wasn't aware of his involvement as a paid witness against FDIC," the Texas Democrat said, referring to Mr. Brum-

Morgan Helps Japanese Bank Skirt Barrier to Subordinated Bond Issue

By KELLEY HOLLAND

A Japanese bank Friday found a way around a recent move by the Ministry of Finance to make it more difficult to issue subordinated bonds.

A J.P. Morgan & Co. unit devised an innovative method of skirting the ministry's near prohibition and used it to help Dai-Ichi Kangyo Bank Ltd. raise $500 million in capital.

Ministry's Stand Assessed

Capital markets specialists said they expect the ministry's restrictions to be short-lived in any case. "They want to put people on hold for a month or two while they reconsider," said one investment banker. "They're not shutting [the banks] down."

The Ministry of Finance authorized Japanese banks to issue subordinated loans early this summer in a move to give banks more options for raising capital. At that time, ministry officials indicated they would not rule out authorizing banks to issue public subordinated bonds but said such deals would be approved only case-by-case.

Almost immediately after its decision on subordinated debt issuance was made public, the ministry allowed a subsidiary of

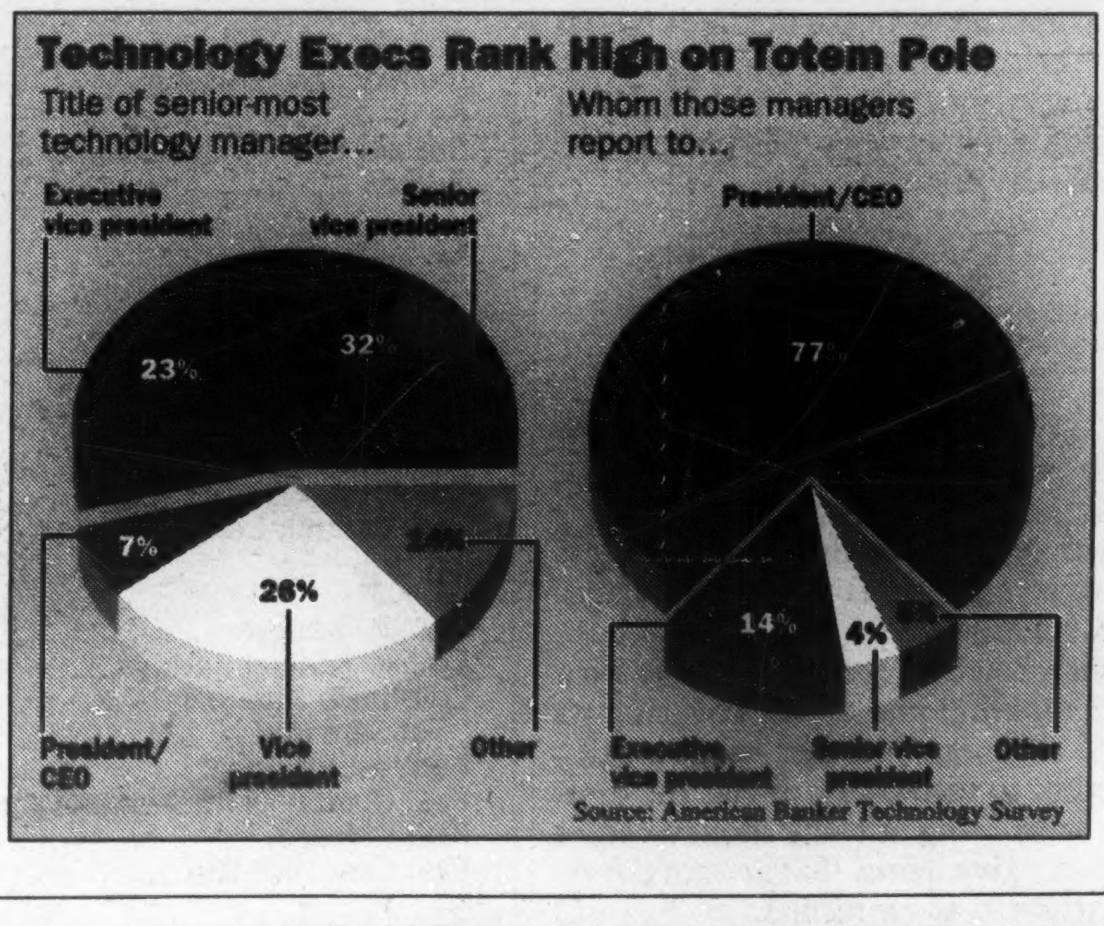
CEOs Jump on Technology Bandwagon



By JEFFREY KUTLER

NEW YORK — Shedding some of banking's past conservatism and mistrust of computers, chief executive officers are getting in on the technology act. They are doing so with great enthusiasm and, perhaps paradoxically, gaining the loyalty and respect of underlings from very different career backgrounds.

The CEOs' increasingly hands-on role and technology managers' positive response are clearly evident in the 1990 *American Banker* technology survey.

At three out of four institutions, the top operations or tech-

Plenty of Blame to Go Around For the Real Estate Collapse

Looking at the collapse in home prices and commercial construction and the impact on the value of bank mortgage loans for all kinds of real estate, I cannot help thinking of the man who trained his horse to live without food only to find to that just when the beast was getting the hang of it, it died.

That's pretty much what happened in home finance.

First, the regulators became extremely strict in evaluating the worth of loans for homes, shopping centers, office buildings, and the like. Then, the banks and thrifts curbed lending drastically to satisfy the regulators. That restraint has so curtailed real estate finance that prices have declined and the fears of the regulators have been realized.

In sum, the horse died.

Problem's Roots Go Deep

But to be fair, while much of the blame today is being placed on the regulators and lawmakers for being too strict on mortgage loans after a decade of being too lenient, the roots of the mortgage market collapse go deeper.

What are some of these roots?

• First, we must recognize that we are now paying for a decade of overbuilding of all types caused by a sympathetic Congress that wanted money readily available for housing in good years and bad, whether it was needed or not.

This was the basis for the legislative and regulatory favoritism that the thrifts experienced all through the 1980s. And it is the reason the commercial bankers complained they could not get a "level playing field" in the competition for funds. As money flooded into the thrifts, they lent it out, and we overbuilt the nation's real estate stock.

• Second, obsolete laws that keep banks from providing full financing for the public led to the growth of so-called nonbank banks and of foreign institutions' power. This forced U.S. banks to concentrate more resources in areas where they did have the power to operate, notably commercial real estate.

• Third, laws preventing geographic expansion of banks forced them to concentrate lending in their own regions and to forgo the comfort of diversifying geographical risk.

• Fourth, the inability of unit banks to generate large volumes of core deposits led to reliance on volatile purchased funds. This helped cause problems in states like Texas and Oklahoma. And it is ironical that because of unit banking laws intended to protect Texas from outsiders every major Texas bank now is owned by non-Texas interests!

• Fifth, the mania for going public that hit so many mutual thrifts in the 1980s left them with new capital burning holes in their pockets – capital that was put to work financing real estate ventures that otherwise might not have been built.

• And finally, as we try to see why real estate prices have collapsed, we find that much of the decline is merely a return to normal from an era of speculative fever. As prices pushed up, real estate owners felt their property was worth many times what they had paid for it.

When the bubble burst, it was impossible to recognize that a home was really salable at 80% or less of what we had thought it was worth. Similarly, Texas did beautifully on $2 oil, superbly on $35 oil, but then fell on its face with $18 oil.

Up to this point, one can conclude that it was restrictive laws and promotional legislation that skewed the nation's available funds and led to the overfinancing of construction. This, coupled with the overreaction today, is causing our housing and commercial construction slump, many potential borrowers hold.

But one can look further.

Much of the financing that did take place was based on overoptimistic sales and price estimates. Builders decided that, if the banks would provide all the money, they would provide "sweat equity."

Banks Took Most Losses

The result: Banks that financed projects that turned sour took most of the losses.

On top of this, many homebuyers and other borrowers have hidden under the mantle of personal bankruptcy when their plans went awry.

The result is a far more cautious banking system.

So there are many roots to our housing collapse and the attendant depression for some banks. We cannot place all the blame on regulators. But we can learn the lesson the Soviet Union also is learning: Watch out when you take away allocation of funds from the free market and give it to government officials. ☐

COMMENT/ *By Jeffrey R. Weisman*

Build Relationships to Win New Middle-Market Clients

Lending officers, by definition, make loans. Now we're asking them to become marketers – to create new business relationships and to sell services.

Many banks offer sales training, but success is slow in coming. The bankers' basic skills are in lending and relationship maintenance. It's difficult for them to unlearn the old habits and adapt to the new selling ways of business.

In the business of getting new business from middle-market companies, one statement by the controller of a $12 million manufacturing company truly applies:

"Your opportunity to switch a company from one bank to yours only comes once – when his current bank screws up."

Windows of Opportunity

But when will that happen? And how does a bank position itself to be the one called or considered when the opportunity arises? In service businesses such as banking, clients don't run out of the service – as the consumer does with Tide and Crest.

There aren't frequent opportunities to win business. And experience in soliciting new business demonstrates that companies that appear most anxious to select a new bank are invariably the companies not very desirable as new clients.

Beyond Quarterly Thinking

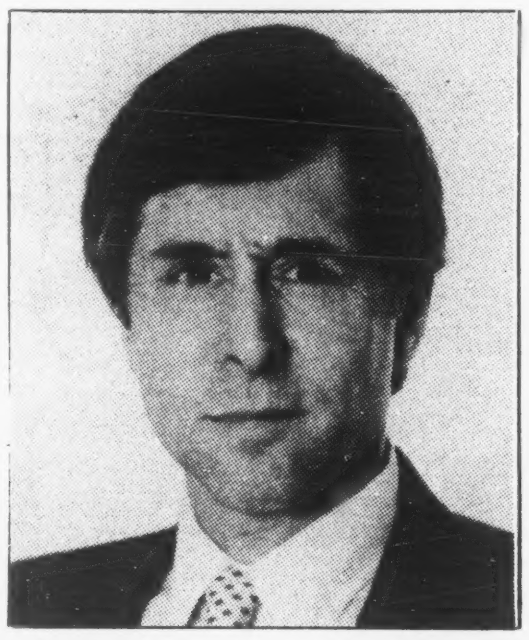
What can a banker do to insure a steady flow of new business? First of all, the bank (and banker) must depart from quarterly thinking to longer-term, sales-cycle thinking. New business is not won after one visit.

It takes eight or 11 or 14 months to land a new client. It requires building a relationship so that when the prospect's current bank "screws up," you and your bank are called as the replacement or to make a proposal.

Quarterly make-the-numbers thinking must be changed. Bankers need the time to develop relationships – and banks need to foster the atmosphere to develop them. This implies a system to measure new business development beyond just accounts signed up.

Give Credit for Activity

In manufacturing companies, work in process is measured or counted. The same can apply in service-company new-business efforts. As a relationship builds, it becomes more of an asset to the bank – since presumably the company will become a client at some point in the near future.



Bankers can receive credit for relationships in process – making initial contact, meeting in-person, developing a first-name relationship with the decision-makers and/or users, maintaining top-of-mind awareness, opening the account, selling additional services.

Relationship-building goals can be applied to each level at the beginning of the year. Moreover, bankers will not become frustrated if a sale is not made – because there will always be prospects at varying stages in the pipeline.

Communications Tools

Bankers need to communicate with prospective customers. They need personalized letters and other sales aids – to make contact, to get in the door, to leave behind, and to keep their name and the bank's name in front of the prospective customer. Bankers should have marketing-communications tools that recognize the value of relationship building. These sales tools should be personalized to the greatest extent possible.

Centralize and Localize

Bankers may be able to write proposals and financial reports but rarely persuasive business letters. So prepare their marketing communications tools centrally: letters, scripts, leave-behinds, attention getters.

Bankers will randomly uncover leads in their normal course of business, but a formal lead-generation program should be coordinated on a centralized basis. Buying a list, cleaning it, and running it against the bank's customer file is a task for marketing management, not line bankers.

Give the bankers the leads to pursue locally and individually. Besides professionally prepared marketing-communication tools, give them the capability to produce letters at the branch or commercial-center level. In this way, they control their marketing efforts while the identity, image, and professional marketing standards of the bank remain high and consistent.

Decentralizing this part of the process will foster the individual style and success methods of the bankers that are needed to cultivate relationships.

Keep Track of Progress

Bankers can be evaluated from their performance with the leads. Performance evaluation calls for objective measures of relationship building. The sale is not the only thing, since it can take months to accomplish.

Who do leads belong to? In the brokerage business, leads traditionally belong to the brokers. Yet in banking, organized selling and relationship building remain relatively new concepts, so leads conceivably still belong to the bank.

By keeping track of progress, the continuity of contact will be maintained if a banker is reassigned. ☐

Mr. Weisman is president of Weisman & Associates, a marketing services company based in New York.

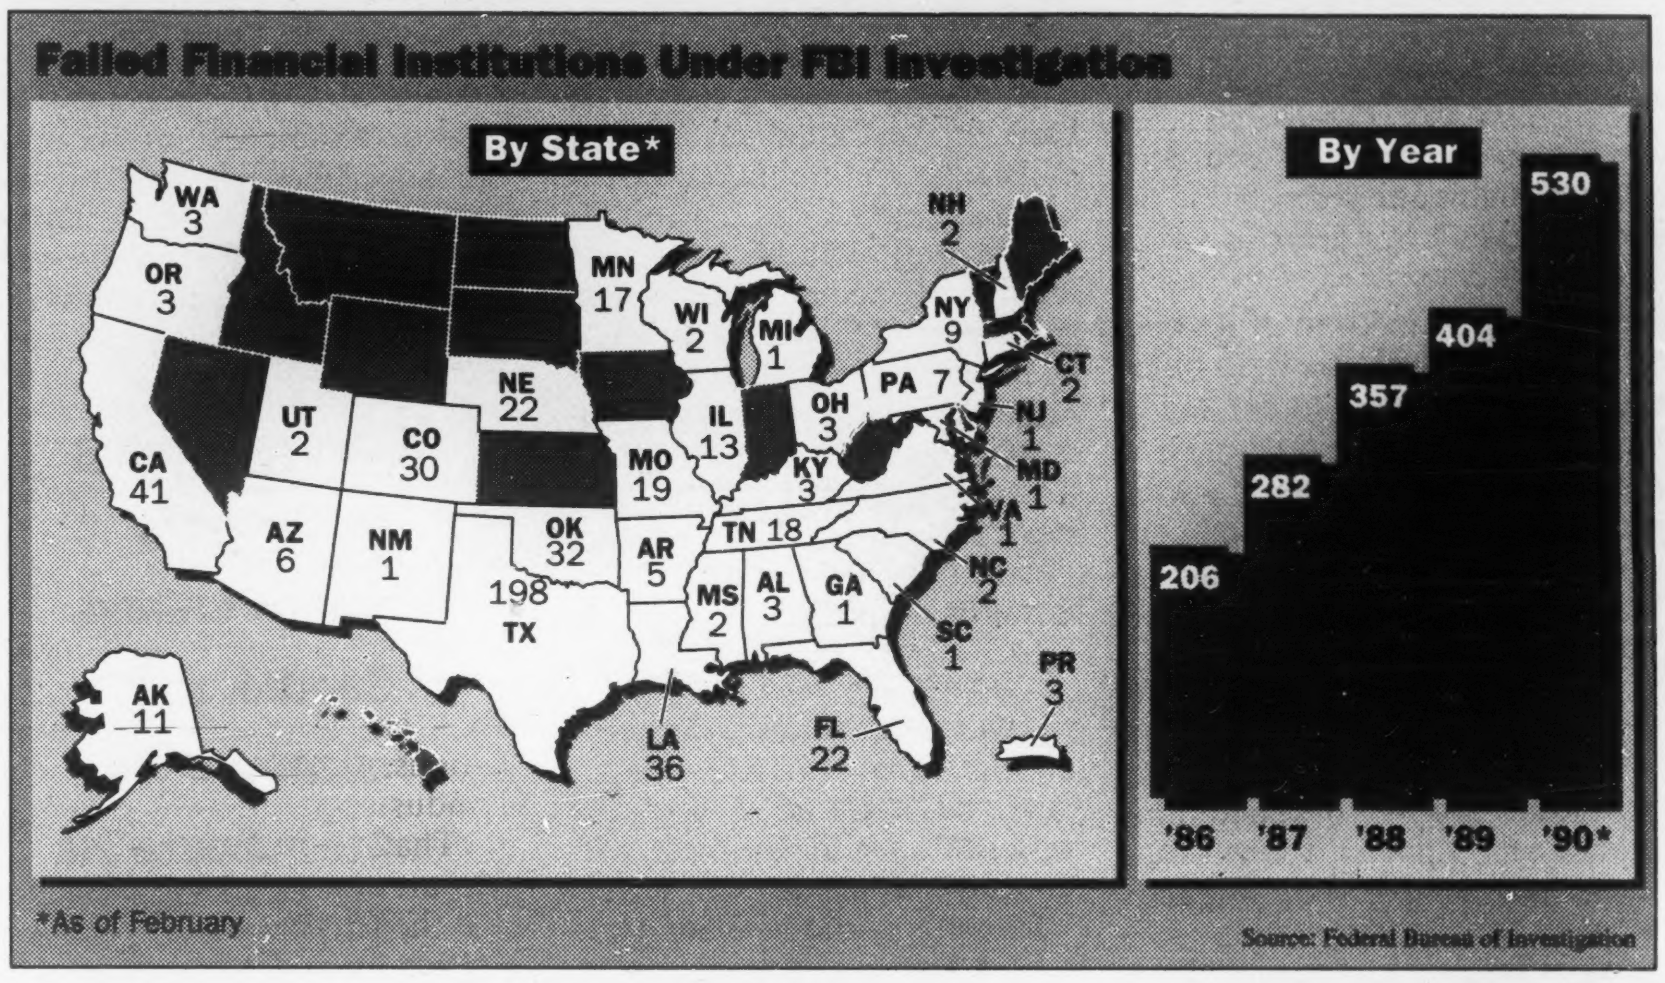
Justice Says Long Arm of Law Reaching More S&L Cases

By BILL ATKINSON

WASHINGTON — Months after Justice Department officials were pilloried by Congress for not working fast enough to throw wayward savings and loan executives in jail, the agency is boasting of bigger and better numbers.

In a study compiled as of July 22 by the department, Justice estimates that 243 S&Ls have been "victimized" since Oct. 1, 1988, and that 328 people have been charged with crimes in thrifts.

In addition, 213 defendants have been convicted, only five have been acquitted, and prison sentences have reached a combined total of 415 years. Fines stand at nearly $1 million, and judges have ordered the convicted to cough up a total of $56.6 million in restitution, the study said.



Failed Financial Institutions Under FBI Investigation

*As of February
Source: Federal Bureau of Investigation

Coordinator Is Upbeat

"The track record of federal investigators and prosecutors in financial-institution fraud investigations and prosecutions is impressive," said James G. Richmond, U.S. Attorney for the Northern District of Indiana and special counsel to coordinate federal enforcement of thrift-related crimes. "We are confident it will even get better in the years ahead."

Mr. Richmond made his comments last week before the Senate Judiciary Committee in Chicago.

Justice's numbers game comes several months after the agency was criticized by Rep. Doug Barnard, D-Ga., and other members of the House Government Operations subcommittee on commerce, consumer, and monetary affairs. Mr. Barnard complained that the department wasn't doing enough to prosecute crime at failed thrift institutions.

"Are we really trying to bring justice to bear in these criminal cases?" Mr. Barnard asked at the hearing last March.

In June, President Bush held what amounted to a pep rally for senior federal prosecutors.

He created a federal strike force to catch criminal activity at financial institutions, and said that the agency would "not rest until the cheats, the chiselers, and the charlatans spend a large chunk of their lives behind bars."

Justice aims to carry out the President's mandate. According to the agency, the number of failed financial institutions under investigation by the Federal Bureau of Investigation jumped 31% to 530 in February, up from 404 at the end of 1989. In 1986, the FBI launched probes into 206 financial institutions.

Lone Star Leader

Texas leads the nation in the number of FBI investigations into failed financial institutions, with a total of 198. It is followed by California with 41 investigations, Louisiana with 36, and Oklahoma with 32 investigations.

Although Mr. Richmond expects to find more evidence of fraud in the Northeast, as yet the region doesn't boast the Texas-size numbers. New York heads the pack with nine investigations, followed by New Jersey with four and New Hampshire with two.

Defending the Government

The agency has assembled a team of attorneys in the civil division to defend the federal government against suits that challenge certain provisions spelled out in last August's Financial Institutions Reform, Recovery, and Enforcement Act, Mr. Richmond said.

One of the most widely publicized cases challenged the appointment of M. Danny Wall as director of the Office of Thrift Supervision.

"Many other challenges to FIRREA are in litigation, and more are on the way," Mr. Richmond said.

Changed Rules?

For example, plaintiffs in 20 pending actions have charged that new capital requirements under the reform act constitute an abrogation of previous contracts or forbearances the institutions entered into with regulators in 1988.

In those deals the government gave some thrift acquirers tax breaks, yield-maintenance agreements, and notes from the Federal Savings and Loan Insurance Corp. □

THE WEEK *ahead*

MONDAY, AUGUST 20

The House and Senate are both in recess. The House returns Sept. 5, and the Senate reconvenes Sept. 10.

The Congressional Budget Office releases its latest assessment of the nation's economy and the budget deficit.

The Supreme Court is in recess until Oct. 1.

TUESDAY, AUGUST 21

The Federal Open Market Committee meets to decide whether to alter Federal Reserve Board monetary policy. Most Fed-watchers had expected the FOMC to again let short-term interest rates fall in order to stimulate a flagging economy, but economic data released late last week included a 0.6% increase in core inflation, far stronger than expected, with the prospect of worse to come.

Surging oil prices caused by the Iraqi invasion of Kuwait, and the subsequent boycott of the 4.4 million barrels a day of oil that those countries were producing, will raise the inflation rate to 5.2% for 1990 and reduce economic growth to 1.1% this year and 0.5% in 1991, said Donald Ratajczak, director of the Georgia State University economic forecasting center.

Economists say an easing is still expected but will be postponed by the FOMC until events in the Middle East stabilize and the direction of oil prices becomes clear. 202-452-3000.

The Resolution Trust Corp. board holds an open meeting. Topics include affordable housing rules and revisions of its ethics rules. 202-416-7566.

WEDNESDAY, AUGUST 22

No significant events scheduled.

THURSDAY, AUGUST 23

Durable goods orders and shipments figures for July are to be released by the Commerce Department.

FRIDAY, AUGUST 24

The Federal Reserve Board releases the minutes of the Federal Open Market Committee's July 2-3 meeting, which will show whether it decided to change Fed monetary policy. 202-452-3000.

The first revision of real gross national product figures for the second quarter is to be announced by the Commerce Department.

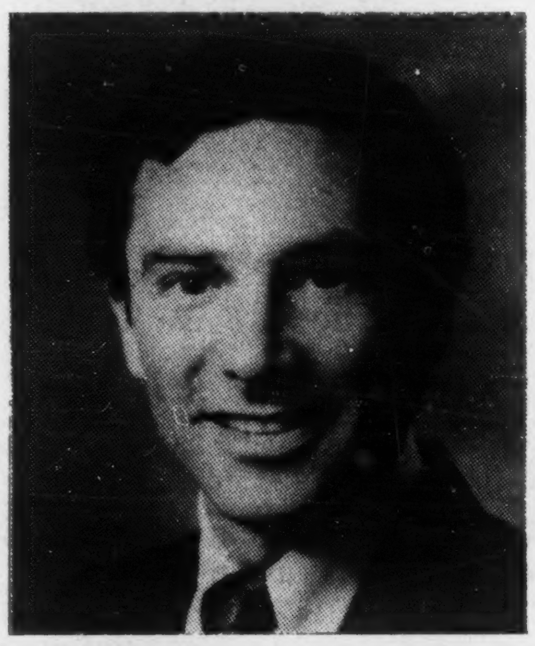
Preliminary corporate profit figures for the second quarter are to be released by the Commerce Department.

PEOPLE

Wells Fargo Replaces Retiring Lobbyist

The banking subsidiary of Wells Fargo & Co. will replace its retiring lobbyist **Jackson Schultz** with **Craig G. Wolfson** on Aug. 31.

Mr. Wolfson, 40, joined the San Francisco bank in April from the banking subsidiary of First Nationwide Financial Corp., also of San Francisco. He had run First Nationwide's government affairs office since September 1988. Before that, he was the thrift's acquisitions manager and, earlier, its corporate counsel. He holds a law degree from the University of Florida.



Craig G. Wolfson
He'll take over

Mr. Schultz is staying with Wells Fargo under a three-year consulting contract for special government affairs projects.

Meanwhile, MNC Financial Inc., Baltimore, let go **Marguerite D. Ayers,** who had tracked Washington affairs for the $27 billion-asset banking company.

"Her function was eliminated as part of our consolidation process resulting from the merger with Equitable," said MNC spokesman **Daniel G. Finney.** "She was released with a severance package a couple of months ago."

Michael C. Middleton, MNC executive vice president, administration, remains top lobbyist.

Mr. Finney denied that MNC is cutting its lobbying effort by dropping Ms. Ayers. "The government relations function has always been managed by an executive vice president of the holding company," he said. The company reported a $74.4 million second-quarter loss last month, as its nonperforming assets ballooned by 111%, to $757 million.

Gerald L. Jacobs is the Resolution Trust Corp.'s new special counsel, the top legal job at the thrift bailout agency. He replaces **Rex R. Veal,** who left the RTC Friday to return to private practice with Powell, Goldstein, Frazer & Murphy in Atlanta.

Mr. Jacobs, slated to start work Sept. 1, comes to the RTC from O'Connor, Cavanagh, Anderson, Westover, Killingsworth & Beshears, a Phoenix-based law firm where he has worked since 1963.

At its open meeting last week, the RTC settled a lingering question about whether the agency's legal operation ought to be separate from the Federal Deposit Insurance Corp.'s legal office. RTC lawyers will continue reporting to the FDIC general counsel, **Alfred J.T. Byrne.**

Mr. Byrne said in an interview last week that one general counsel makes the most sense because the FDIC and the RTC share boards of directors.

"Gerry Jacobs is an exceptional manager and a superb business and real estate lawyer," Mr. Byrne said. "He is someone I have known and respected for more than a decade."

Mr. Byrne worked with Mr. Jacobs in the late 1970s when the latter represented INA Corp., an insurance company where Mr. Byrne managed investments.

Mr. Jacobs holds a bachelor's degree in economics from Stanford University and a law degree from the University of Arizona.

Mr. Byrne said Mr. Jacobs was lured to the job by its challenge. "We are where the action is," he said.

NY Blackout Prompts Review Of Disaster Plans

By JEANNE IIDA
and KAREN GULLO

When Citicorp's computer problems kept the nation's domestic payment system open till midnight last week, many others felt the repercussions.

Banks paid overtime to employees working almost round the clock, backup generators were strained at the Federal Reserve Bank, and corporate customers reported lag times in receipt of transactions.

ANALYSIS: *Follow-up on the news*

An executive of Merrill Lynch & Co., a Citicorp customer, said the brokerage firm could not quantify the impact of the late settlement on Wednesday. But the week-long problems at Citicorp and other major banks because of a power failure cost Merrill "tens of thousands" of dollars in unnecessary overdrafts because it could not accurately assess its positions, he said.

Industry experts said Citicorp was caught with its guard down. If it had been using a relatively new form of disaster recovery that copies transactions to a remote site as they occur, it probably would have fared much better. Its funds business would have been disrupted for only a few hours instead of almost a day, they contend.

Remote Vaulting

Manufacturers Hanover Trust Co. and Chemical Bank have had this capability, called remote vaulting, for several months. Neither of those banks' funds transfer operations were affected by the recent blackout, so that ability was not tested.

Ironically, Citicorp was in the process of designing such a system when the power outage occurred, sources close to the bank said.

Industry insiders said that not only was Citicorp lacking in state-of-the-art technology, but it may have handled its operating problems poorly. Citicorp "waited far too long to implement its internal plan, and then it failed," said one disaster recovery expert.

"We're sufficiently concerned [about our disaster recovery plan] that we will do a detailed postmortem and then we'll take action," said Colin Crook, Citicorp's information chief.

"This was a loss of power on a big scale. People tend to focus on defined disaster scenarios. They need to be more flexible."

Sources noted that Citicorp was the only money-center bank

Filings Reveal Banks Hold 30% Of Collateralized Mortgage Bonds

By PHIL ROOSEVELT

As commercial banks stormed into home-mortgage finance over the past year, they appeared to take a special interest in collateralized mortgage obligations, or CMOs. Now, for the first time, regulatory data have specified the extent of that interest.

Led by 100 especially active institutions, the banking industry held about $36 billion of the most common types of CMOs at the end of March, the data show. (Table appears on page 7.) That position, built almost from scratch at the end of 1988, represented nearly 30% of all such CMOs, and about 6% of all securities held by banks.

Steady Appetite

Bankers and dealers say banks' appetites for instruments has diminished somewhat in recent months because of declining yields relative to Treasury securities and some regulatory uncertainty.

But the industry's appetite has hardly disappeared. With loan demand declining, banks are closely eyeing securities purchases, and CMOs still yield more than some corporate bonds, experts note.

"We're still seeing a large amount of interest by banks across the board," says Craig Overlander, a senior managing director at Bear Stearns & Co., New York.

Holdings Disclosure

The Federal Deposit Insurance Corp. required banks to disclose their CMO holdings for the first time in call reports for

Judge Backs Government In Seizure Of Lincoln

By DEBRA COPE

WASHINGTON — U.S. District Court Judge Stanley Sporkin upheld on Thursday the government's 1989 seizure of Lincoln Savings & Loan Association, accusing Charles H. Keating Jr. and other officials of "looting" it.

The ruling was viewed as a big victory for federal thrift regulators and an endorsement of their procedures for assessing and closing troubled institutions.

Heavy Blow to Keating

It also dealt a major blow to Mr. Keating's campaign to regain control of the Irvine, Calif., savings and loan, which had become symbolic of the costly thrift crisis and bailout.

Judge Sporkin's ruling came after eight months of testimony in which Mr. Keating sought to prove that regulators acted "arbitrarily and capriciously" when they placed Lincoln in receivership in April 1989 and in conservatorship four months later.

Mr. Keating contended that the thrift was actually solvent and regulators carried out a personal vendetta against him.

The judge said Lincoln and its parent, Phoenix-based American Continental Corp., improp-

Customers Claim NBW Misused Insured Deposits

By BILL ATKINSON

WASHINGTON — Customers of the failed National Bank of Washington have filed more than a dozen lawsuits alleging that the bank illegally used insured deposits and funds intended for low-risk investments to bolster the commercial paper program of its parent company.

The flurry of lawsuits comes just weeks after the holding company, Washington Bancorp., filed for reorganization under Chapter 11 of the federal Bankruptcy Code. Hours after that Aug. 1 filing, federal regulators seized the $1.6 billion-asset National Bank of Washington and subsequently sold its deposits to Riggs National Corp., Washington.

Unsecured Creditors Unpaid

Wells Fargo Shares Fall Sharply On Fears of California Real Estate

By GORDON MATTHEWS

NEW YORK — Shares of Wells Fargo & Co., a favorite trading vehicle of many bank stock investors, have tumbled dramatically in value this summer as worries have grown about the U.S. economy and in particular about the real estate market in California.

The stock of the well-regarded San Francisco superregional bank closed at $80.125 on July 17 as it reported strong second quarter profits. That same day the Dow Jones industrial average peaked at 3,024.26, before closing just below the 3,000 mark.

Both have since been in a steep southbound spiral, and bank analysts are mixed about Wells' outlook.

Peaked in Mid-July

Wells' shares fell below book value this week and briefly dipped below the $50 mark on Thursday, a slump of 38% from the mid-July peak. In the meantime, the Dow fell another 40 points to 2,560.15, an 18% decline over the same period in the closely watched blue chip index.

COMMENT / By James Grant

Banks Now Pay for Years Of Sapping Their Finances

Whatever else it might be, the dust-up in the Middle East is an Exogenous Event – an unexpected disturbance from outside. In boom times, investment bankers assumed that nothing could, or would, intrude on prosperity – every surprise would be a tender offer.

Now that something has gone wrong, the universal finger of blame is pointed at the scene of the disturbance, not at the frail financial structure that was so easily upset by it.

The United States may or may not be more vulnerable to a disruption of its oil imports than it was 17 years ago. It is certainly, we think, more vulnerable to an interruption of its prosperity. Interest rates are higher, financial leverage is greater, and the banking system is more fragile than it was at the time of the first oil jolt.

Citicorp as Exemplar

There are many ways to illustrate the poin, but the decline of Citicorp (then as now the largest U.S. banking company) is one of the most vivid and telling.

In 1973, Citicorp was riding high. By the not very exacting standards of today, the bank was profitable, liquid, conservatively capitalized, resilient, and expansion-minded.

Its stock changed hands at a premium to book value. Its debt was unrated (there wasn't much debt to rate, in fact) but was destined to be Aaa when Moody's first investigated it, in 1977.

In every particular, 1990 is different – and different, of course, not only for Citicorp but also for big U.S. banks in general. Although it has not been earning its dividend for three years, Citicorp recently raised it. Its return on average assets last year was a paltry 23 basis points; it earned 63 basis points in 1973.

In 1989, its ratio of loans to deposits was 112%; it was 80% in 1973. In 1989, Citicorp earned 4.3% on equity; in 1973, it earned 15%. As for its senior debt rating, it is no longer Aaa. Moody's judges it to be A3.

In the early 1970s, Citicorp was hot, like inflation. In 1973, when the editors of *Dun's Review* selected it as one of America's five best-managed corporations, its assets grew by 28%. In 1974, a wall-to-wall recession year, assets grew by 32%.

It is fun to reread the bear-baiting letters that Citicorp chairman Walter Wriston wrote to his shareholders in those days. "It was a good year to remind ourselves that the recuperative powers of the world are enormous and the ability of its three and three-quarter billion people to develop in new ways to handle new situations has always exceeded the imagination of the doomsday prophet," he wrote of 1973.

Brave words! What Mr. Wriston did not commit to paper was the thought that inflation subverts what his predecessors called sound banking – that it undermines asset quality in the long run even as it stimulates asset growth in the short run.

And if that thought did not occur to Mr. Wriston, neither did it seem to worry his successors. Pick up any study of questionable bank lending (real estate, highly leveraged transactions, loans to lesser-developed countries), and Citicorp is sure to be mentioned early and often.

> **"Will the next recession resemble that of 1973-75? Insofar as the resilience of the U.S. financial system bears on the question, we are led to believe that it may well be worse."**

A Cycle of Wasting

The issue, however, is not a particular class of loan but a process of atrophy. It is a cycle that has involved much of the U.S. banking industry.

The process works like this (thank you, James Robinson): A rise in bad assets is met with a grudging rise in reserves. As reserves increase, earnings decrease. By degree, the decline in creditworthiness forces a rise in the cost of funding: The prices of jumbo certificates of deposit and interbank loans go up.

As the cost of liabilities rises, interest margins shrink; profits fall again. With every addition to the reserve for bad debts, the problem is exacerbated. Maddeningly, it costs more to attract deposits for loans that aren't accruing interest income than for loans that are.

The Unfriendly Markets

At length, some loans are written down to zero. Still, everyone sees, the reserve is inadequate to cover the questionable debts that haven't been written down all the way.

Walter Wriston was fond of rebutting the calamity-howlers of his day with a line about the market's creative powers. In our day, banks in general, and his alma mater in particular, are making heavy weather of it in a number of markets.

"American Telephone & Telegraph Co. said its new credit card ranks eighth in the country, with revenue of $750 million after 140 days in operation," the *Wall Street Journal* reported last week in an article that must have rattled the windows in Citicorp headquarters.

No doubt, the marketplace is evolving a new, deflation-resistant credit structure even now. But for the time being, the deflation of asset values – the very values against which Citicorp and other banks lent so blithely in the boom – proceeds apace.

In 1973, bankers were optimistic, and bank credit was expanding. In 1990, bankers are worried, and bank credit is stagnant – even, in certain regions and markets, contracting. It is a perilous time in which to impose a new tax on oil.

Will the next recession resemble that of 1973-75? Insofar as the resilience of the U.S. financial system bears on the question, we are led to believe that it may well be worse. ☐

COMMENT / By Masaharu Usuki

From Tokyo, Strong Support For Japanese Deregulation

The following appeared in slightly different form in a June newsletter published by the Long-Term Credit Bank of Japan, Tokyo.

The second meeting of the Japan-U.S. working group on financial markets took place in Tokyo in late May. A statement issued by U.S. Treasury Undersecretary David Mulford after the meeting said the United States appreciated the liberalization of overseas bank account openings by individuals and other Japanese financial deregulation measures but was still dissatisfied with current conditions regarding deregulation of bank deposit rates and foreign firms' access to the Japanese money market.

The U.S. Congress also remains greatly concerned over Japan's financial markets and is even tougher than the Treasury Department in demanding Japan's financial deregulation.

The Congressional concerns have taken the form of the proposed Fair Trade in Financial Services Act, which passed the Senate Banking Committee. It would enable the Federal Reserve Board and other regulators to disapprove expansion of U.S. operations by foreign financial institutions if the Treasury secretary judges that their countries fail to give U.S. institutions opportunities to fairly compete in their domestic markets.

The primary purpose of the legislation is to pressure Japan into quickening financial deregulation.

Market Share Increasing

Behind the tough U.S. request is the fact that Japanese banks' shares of U.S. and other overseas markets have been persistently increasing. Eight of the 10 largest banks in the world in assets are Japanese.

In 1980, the largest Japanese bank was ranked 10th in the world. But Japanese banks started rapid growth around 1984.

The agreement on new capital adequacy regulations at the Bank for International Settlements in 1988 was designed primarily to hold down the fast expansion of Japanese banks. But the fiscal 1988 asset growth of Japan's city, trust, and long-term credit banks was 16%, exceeding an annual average of 12% for the fiscal 1983-87 period.

In the United States especially, Japanese banks' lending has increased rapidly. They accounted for 16% of commercial and industrial loans in the United States at the end of 1988, being the top foreign lender in that country. Moreover, Japanese banks' outstanding loans there expanded as much as 50% from the end of 1983. In contrast, foreign banks' share of bank loans in Japan is limited to 2% and has been declining.

Competition from EC

Another matter of concern to the United States has emerged in relation to U.S. banks' international competitiveness, namely the European Community's financial market integration scheduled for 1992. Upon integration, an institution given a banking license in any EC country will be able to do business in any other EC nation.

But the EC's second directive on banking allows the EC Commission to decide whether to give a new business license to a foreign bank in view of reciprocity. The decision will depend on whether the home country of the foreign bank guarantees EC banks effective access to its domestic market.

The EC financial market integration has caused two moves in the United States. One seeks to make the U.S. market as liberal as the EC market, by allowing the mutual encroachment of commercial banks and securities companies onto each others' turf and by permitting interstate banking. Another move introduces the weapon of reciprocity requirement to counter the EC action, and directs it against Japan.

Hastening Deregulation

Some foreign leaders, including Federal Reserve Chairman Alan Greenspan, appreciate Japan's financial deregulation to date. The recent declines in Japanese stocks and the yen are expected to decelerate the expansion of Japanese banks' assets. In this context, efforts to persuade foreigners to understand Japan's realities might ease foreign pressures for Japanese deregulation.

But Japan cannot expect such efforts to have a lasting effect. The world is moving toward prompt deregulation, and this can also improve Japan's economic welfare. Deregulation would serve to intensify competition between financial institutions, helping to improve services and lower costs for fund-raising and investment activities of industrial companies and consumers alike.

Needless to say, Japan should make efforts to speed up financial deregulation as much as possible. ☐

Mr. Usuki is with the economics division of Long-Term Credit Bank of Japan, Tokyo.

Bank Holdings in Collateralized Mortgage Bonds Disclosed

Continued from *page* **1**

the quarter ended March 31.

CMOs, which flourished after tax-law changes in 1986, are multiclass securities that can provide investors with more payment certainty than basic mortgage-backed securities. Typically backed by basic mortgage securities, CMOs offer short-, intermediate and long-term estimated maturities.

Risks, Returns Vary

CMO classes vary widely in riskiness and potential returns. Michael Grupe, head of mortgage research at Kidder, Peabody & Co., says banks have tended to concentrate on relatively stable CMO classes with two- or three-year estimated lives, finding them good fits against deposits and other liabilities.

"We're still seeing a large amount of interest by banks across the board."

Craig Overlander
Bear Stearns & Co.

Three-year classes of traditional CMOs now sport yields about 90 basis points higher than those of comparable Treasury securities, according to Merrill Lynch Mortgage Capital. The push into CMOs comes as commerical banks also have been making major inroads into mortgage originations, mortgage servicing, and investments in basic mortgage-backed securities.

Risk-based capital rules have provided fresh incentives for banks to take on mortgage assets, and the problems in the thrift industry have created some big opportunities for banks.

Move Away from Treasuries

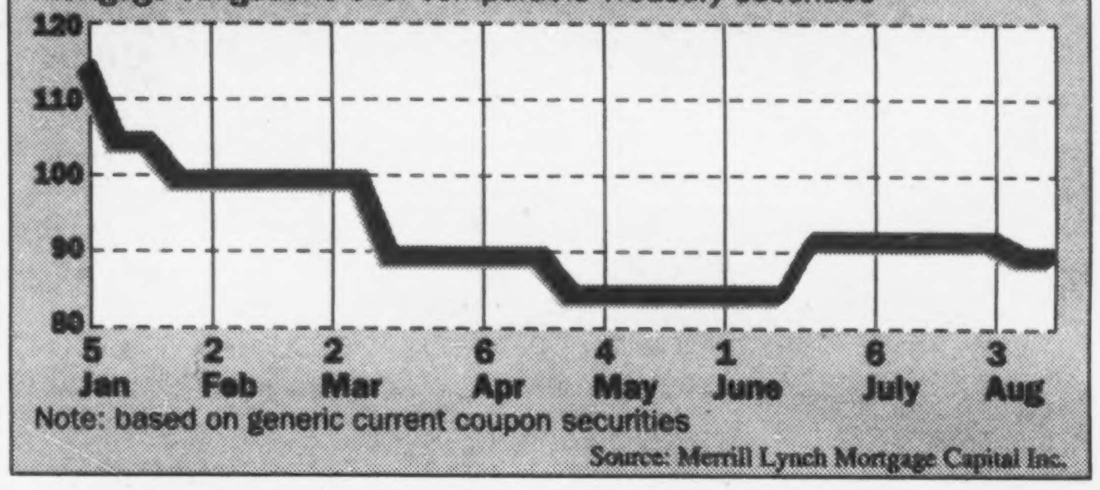
National City Bank, Cleveland, says it increased its CMO position sharply last year as sales of mortgages by insolvent and capital-short thrifts drove up the relative yields on most types of mortgage securities.

"We felt mortgage spreads were wide and wouldn't stay that wide for long, so we moved out of Treasuries and into CMOs," said Jeffrey D. Kelly, senior vice president of National City.

The FDIC data show that the top 100 banks held about $25 billion of the most common types of CMOs as of March 31, representing about 18% of all securities held by the banks and 3% of their assets.

Spreads Tighten on CMOs

Estimated yield spread, in basis points, on three-year collateralized mortgage obligations over comparable Treasury securities



Note: based on generic current coupon securities

Source: Merrill Lynch Mortgage Capital Inc.

The FDIC data deal with CMOs issued by the Federal National Mortgage Association and the Federal Home Loan Mortgage Corp., the dominant form of CMO.

The two secondary-market agencies say they had a total of $125 billion of such securities outstanding as of March 31. Most of the securities are CMOs issued through real estate mortgage investment conduits.

While the FDIC had not collected CMO data before the first quarter, the Department of Housing and Urban Development has estimated that banks held only $2.1 billion of Fannie Mae and Freddie Mac Remics as of December 1988. Such securities were nonexistent until August 1987, when Fannie Mae issued its first Remic.

Many of the top 100 banks in the market also have substantial positions in basic mortgage-backed securities, known as pass-throughs. No. 1 ranked Pittsburgh National Bank, for example, holds about $2 biliion in CMOs and $3.7 billion in pass-throughs as of March 31.

But some banks clearly prefer CMOs to to the pass-throughs. No. 5-ranked First American National Bank, Nashville, Tenn., held $883 million of CMOs as of March 31 but only $174 million of pass-throughs, preferring the shorter maturities available in the CMO market.

The average estimated life of the bank's CMOs is about three years, said Howard Ragsdale, a senior vice president. "Pass-throughs would have 10- or 11-year average lives," he said. "We don't feel that banks should play in that market – it's just too much interest-rate risk."

To be sure, the average lives of short-term CMOs can increase significantly if interest rates rise. The degree of risk varies from CMO to CMO and can be extremely high with so-called companion bonds.

But Mr. Ragsdale reckons that First American's CMOs would see their average lives increase to only 3.2 years from the current 2.8 years if market rates rose by 300 basis points.

That is well within the limits with which regulators apparently are comfortable. The Office of the Comptroller of the Currency, in a propopsed rule that was floated earlier this, suggested that if a 300 basis-point rate rise causes the securities' lives to lengthen by seven years or more, the securities are unsuitable for national banks.

Uncertainty caused by that proposal contributed to a decline in banks' appetites for CMOs during the spring, dealers and bankers say. But a number of banks apparently have resumed their buying, albeit more cautiously. The OCC has yet to act on the proposal.

"There is less interest in volatile classes and more interest in more stable classes," said Mr. Overlander of Bear Stearns.

Of course, not all banks have been drawn to CMOs. For example, Signet Bank/Virginia, Richmond — a big player in the pass-through market — has generally steered clear of the CMO market.

The bank likes the higher yields found on pass-throughs and can absorb long-term assets, said Mike Flynn, a Signet vice president. He added that as the CMO market has become increasingly sophisticated, the securities have become "too esoteric to monitor" effectively.

For CMO fans, the most immediate concern is the decline in yields relative to Treasuries. Yields on traditional three-year classes have declined to 90 basis points over Treasuries from 115 basis points at the start of the year, according to Merrill.

The phenomenon stems in part from the weak housing markets, which has restrained the new supply of mortgages and basic mortgage-backed securities, analysts say.

Pittsburgh National, which built most of its industry-leading position in the second half of last year, has slowed its buying markedly this year, said Walter L. West, an executive vice president. He cited both a reduced need for assets and the tightening spreads.

"There isn't the opportunity to buy [CMOs] and match-fund them at spreads anywhere near as attractive as last year's," he said.

First Union Corp. also has pulled back in recent months, after increasing its position to about $300 million during the second quarter. The Charlotte, N.C., company, did not rank in the top 100 on March 31, with holdings of less than $60 million.

"We continually monitor the market and don't feel very good about it right now," said Ross Annable, a senior vice president at First Union. "We feel it might be a bit rich." □

George Bender Joins Ranieri's Battalion

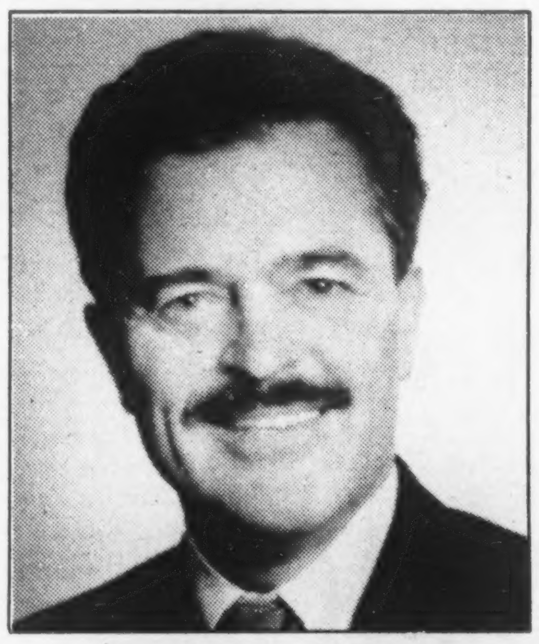
By PHIL ROOSEVELT

George Bender knows what it's like to be Eisenhower's field general, George Patton – or Casey Stengel's slugger, Mickey Mantle.

He has just become Lewis S. Ranieri's mortgage-banking man.

United Savings Association of Texas, a Houston thrift led by Mr. Ranieri, last week named Mr. Bender executive vice president in charge of its burgeoning mortgage banking operations.

Mr. Bender — formerly head of CenTrust Bank's mortgage banking unit and a 28-year veteran of the industry — says he was eager to work with Mr. Ranieri, a former Salomon Brothers vice chairman who is considered the father of the mortgage-backed securities market.



"I bring specific mortgage banking knowledge."

George Bender
United Savings Association

'Good Combination'

"I bring specific mortgage banking knowledge, and he brings capital markets knowledge second to none — and that's a very good combination," Mr. Bender, 51, said in a phone interview from Houston.

United, which Mr. Ranieri purchased in a government-assisted deal in 1988, recently acquired a 15-state network of mortgage offices from Commonwealth Mortgage of America, Houston.

That gives United the capability to originate an estimated $3 billion of mortgages a year. It currently services about $4 billion of loans for itself and for investors.

"George is a consummate production executive and a seasoned mortgage banking chief executive," said Walter C. Klein, chief executive of Sears Mortgage Co., Riverwoods, Ill. "I think he will be a formidable competitor for national originators, including Sears."

Mr. Bender said United plans to add further to its branch system, especially in the Midwest, and to build a substantial correspondent network to get additional volume.

He expects the network to eventually include about 500 small and midsize mortgage brokers and mortgage bankers, with United undewriting the loans and closing most of them in its own name.

Mr. Bender had been with CenTrust Mortgage, Deerfield Beach, Fla., for five years, helping the company expand from 11 to 54 offices and markedly boosting profitability, according to United. But the parent, CenTrust Bank, was seized by the government earlier this year.

At CenTrust, Mr. Bender developed a correspondent network that "won kudos around the country," said Thomas La Malfa, research head at Asset-Backed Capital Corp., Cleveland.

Mr. Bender earned his mortgage banking stripes at Advance Mortgage Corp., Southfield, Mich., joining the company in 1962 and rising through the ranks during 15 years.

He went on to become senior vice president of United First Mortgage Corp., San Diego; chief executive of Unity Mortgage Corp., Chicago; and chief executive of West America Mortgage Co., Denver. □

Key Interest Rates

	Week ended 8/17/90	Week earlier 8/10/90	Year earlier 8/18/89

Is Wall Street Overaggressive In Bond Pricing?

By KELLEY HOLLAND

When Continental Bank Corp. withdrew its planned debt offering last week, the Chicago-based bank became the latest in a series of banks to feel the effects of seemingly aggressive bond pricing by Wall Street firms.

Debt offerings by commercial banks appear to be getting mispriced with greater frequency, and it is making it harder than ever for new issues to come to market, according to bankers and capital markets specialists.

ANALYSIS: *Follow-up on the news*

They say overly aggressive pricing is adding to the barriers banks face when they consider tapping the capital markets, making it even harder for them to raise new capital.

"You've got a negative market on the one hand, anxious banks on another, and investment banks who are anxious for business," said a treasury official at one regional bank. "There's a certain amount of pain that's going to be shared by everybody."

Bond offerings brought as recently as late July are now trading at yields as much as 20 basis points wider relative to Treasuries than the yield at offering. Bonds issued in June by Bankers Trust Corp. at a yield 115 basis points over Treasuries are now trading at a yield about 150 basis points over Treasuries.

And last week, the proposed yield spread relative to Treasuries for the Continental offering increased 50 basis points before the bank decided to defer the issue.

"Some are done with some market reality, and some aren't," said one investment banker.

Overly Optimistic Pricing

Several factors are causing bonds to be mispriced, specialists say. First, investment bankers who work with banks are suffering from a near absence of new issue business this year, as banks who can afford to wait are staying away from the jittery capital markets.

As a result, when a bank does decide to come to market, competition is fierce for the underwriting fees that will ensue.

Investment bankers are bidding aggressively for what underwriting business there is today. And often, that aggressive bidding means telling clients that deals can get done at overly optimistic rates.

"When you get into any situa-

HLTs Soar at First Chicago As Top Lenders' Total Slides

By STEVEN LIPIN

First Chicago Corp.'s portfolio of loans financing highly leveraged transactions skyrocketed by $1 billion, or 38%, in the second quarter, mostly because of the reclassification of existing loans, according to regulatory filings.

Meanwhile, Wells Fargo & Co., Bank of Boston Corp., and Security Pacific Corp. reduced their HLT credits by hundreds of millions of dollars.

Average Is Down

The total HLT portfolio of the 25 banks with the largest exposure fell by a marginal 1.7% in the second quarter, according to data compiled by SNL Securities, a publishing and data base company based in Charlottesville, Va. HLTs as a percentage of assets also fell slightly.

Where HLT lending increased, most was attributed to the reclassification of existing loans, not from booking new ones, bank officials say. Banks continue to pore through their portfolios to determine whether a loan constitutes an HLT.

Despite the new standard definition, "There's a lot of interpretation," said a senior credit official at a major bank. "It's not as straightforward as one might think."

Secondary-Market Obstacle

While equity analysts have pressed banks to reduce outstanding loans to leveraged companies, bankers say, the difficult environment for syndication has slowed loan sales to the secondary market. That has made it harder for banks to reach their goals of reducing HLT portfolios.

However, banks that sold HLT loans during the quarter booked new ones and received the up-front fees and higher interest rates, which helped the bottom line, bankers said. And the new loans were often of better quality than existing credits.

"What you're seeing is that banks are pursuing a strategy of maintaining a steady HLT portfolio," commented Christopher L. Snyder, president of Loan Pricing Corp. As some loans are sold off, others are added, he

Gonzalez Wants Single Banking and Thrift Czar

By BARBARA A. REHM

WASHINGTON — Rep. Henry B. Gonzalez said he is planning to introduce legislation next year to merge the three deposit insurance funds and create a single regulator for banks, thrifts, and credit unions.

The House Banking Committee chairman wants to set the far-reaching regulatory reform in motion this fall with a series of hearings leading to introduction of two major bills when the 102d Congress convenes next year.

Time Pressure Seen

"I don't like to be governed by fear," the 74-year-old Texas Democrat said in a recent interview with *American Banker*. "What I fear is that time will not allow us to do the fundamental, drastic overhaul of the system required before you have a crisis."

One of the components of his drastic overhaul would be a bill revamping the deposit insurance system, which most Washington observers see as the next big financial priority on Capitol Hill. A second bill would address regulatory reform.

"There is an absolute need to completely overhaul the regula-

3 Calif. Giants Lead Contenders For Merabank

By TERESA CARSON

LOS ANGELES — Eager to expand their Western presence, three big California banks have emerged as the top contenders to acquire the failed Merabank, the largest thrift in Arizona.

BankAmerica Corp., San Francisco, Security Pacific Corp., Los Angeles, and Wells Fargo & Co., San Francisco, are aggressively pursuing Merabank, which has 66 branches holding $4.7 billion in deposits. Though Merabank is an attractive franchise for building market share, sources said the Resolution Trust Corp. may not get a hefty premium because of Arizona's troubled economy.

Big Premium Unlikely

"The pricing will probably not be as rich as Western," said one source. Bank of America last

Bottorff Ties the Knot that Binds Sovran to Citizens and Southern

By KENNETH CLINE

ATLANTA — When Sovran Financial Corp. and Citizens and Southern Corp. announced plans to merge last September, senior executives on both sides began describing their budding relationship with mantralike repetition.

"We're a merger of equals," they said over and over to reporters, analysts, and anyone else who would listen.

The delicate task of maintaining the equilibrium in this merger fell to Sovran's president, Dennis C. Bottorff.

Bottorff's People Skills

Mr. Bottorff, 46, has already proven his mastery as a behind-the-scenes player, particularly skilled in handling people and winning over others to his point of view. But these talents will be taxed to their limits in the birthing of C&S/Sovran Corp.

Coping with High Leverage: A Framework for Lenders

Spurred by relatively attractive lending spreads, financing of highly leveraged transactions has grown in recent years. Despite a relatively favorable economic climate, the number of troubled HLTs, such as Federated, Interco, and Seaman Furniture has risen. Consequently regulators, rating agencies, and shareholders are becoming concerned with bank HLT exposure.

Some commentators believe that the next recession will trigger widespread HLT defaults. Thus, they conclude that HLTs will become the banking crisis of the 1990s.

The current concerns with the HLT market do not reflect any fundamental changes in risk. Rather, they merely reflect a growing awareness of risks that have existed for several years.

The problem for banks is not with HLT lending in general but with their underwriting and portfolio practices.

Little Margin for Error

High leverage levels leave little margin for error with debtor performance problems quickly triggering a financial crisis. Consequently, correct HLT underwriting decisions are critical and involve business and financial risk.

Business risk concerns the predictability of the debtor's operating cash flows. Companies with unpredictable or volatile operating cash flows are poor HLT candidates because of their uncertain debt servicing ability. Thus, the following situations should be avoided:

Technology. Changing technology disrupts product life cycles and usually requires heavy R&D and capital expenditures, which reduce debt servicing ability. The problems caused by fax technology for Western Union illustrate this problem.

Customer Concentrations. The loss or deterioration of a major customer can seriously impact operations, as occurred at Tracor when the Defense Department reduced its expenditures.

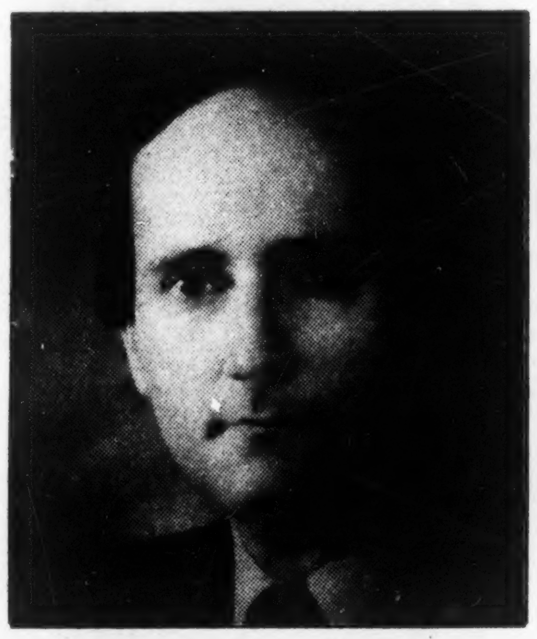
Turnarounds. Turnarounds, such as those planned in the minicomputer industry are highly uncertain and frequently take longer than planned. Consequently, operating cash flow is difficult to predict.

Commodity Products. Capacity and demand fluctuations can reduce prices below break-even, as is now taking place in newsprint and commodity chemicals.

Cyclical. Durable goods manufacturers, such as Fruehauf, are highly susceptible to unpredictable cyclical downturns.

Unsettled Management. An experienced and motivated senior management team must be in place. As Revco demonstrated, it takes too much time and money to build a new team.

The second underwriting consideration is financial risk. Financial risk considerations focus on the relationship of the debtor's expected cash flows to debt service requirements. Even companies with stable, predictable cash flows will fail if overburdened with debt. The areas of concern are as follows:



Purchase-Price Multiples. Preferred multiples are six to eight times trailing earnings before interest and taxes (EBIT). Overpriced transactions leaving the debtor in an unbalanced financial position, such as Federated at 20 times trailing EBIT, are especially suspect.

Capitalization. Transactions with multiples of funded debt to trailing EBIT exceeding six or seven times, such as Southland at more than 15 times, are difficult to justify. They simply cannot amortize their debt according to the terms without assuming operating improvements, asset sales, or refinancing. Additionally, equity capitalization should represent 20% to 30% of the capital structure to provide an adequate cushion for unexpected events.

Projected Debt Service Coverages. The credibility of projected debt service coverages is critical. Transactions based on large projected improvements in historical operating performance, such as that of Ohio Mattress, are questionable. A credibility test is to require trailing EBIT to cover first-year pro forma debt service by at least 1.5 times.

Reliance on Asset Sales. Transactions overly dependent on asset sales are suspect because of uncertainties over the price and timing of the sales. West Point-Pepperell and Interco demonstrate the risks involved when asset sales represent more than 15% of the total transaction size.

Interest Rate Risk. The high level of floating-rate debt in most HLTs exposes the debtor to interest rate risk. This is usually controlled by requiring at least 50% of the bank term debt to be fixed through swaps or caps for three to five years.

Liquidity Risk Exposure. Many recent HLTs contain bridge loans and bonds with increasing rate, reset, and payment-in-kind features. These features are designed to delay cash debt service until the debtor's operations improve or until the debtor can refinance the obligation. Some debtors are, however, facing less than projected performance results and rising debt service requirements from these features, and are unable to refinance.

Consequently, they are exposed to a serious liquidity squeeze, which has forced some firms, such as Jim Walter/Hillsborough into bankruptcy.

The profit potential in HLTs intensified bank interest in funding leveraged transactions. Some banks cut their underwriting standards to gain or maintain market share. Thus, they funded many poorly conceived transactions, which are currently experiencing trouble as the class of 1988-89 transactions matures.

> **"The problem is not with HLT lending in general but with underwriting and portfolio practices."**

HLT lending represents not an industry concentration but a common transaction type involving higher-than-normal leverage levels. Unlike many other problem loan areas, such as energy, developing country, and real estate loans, HLT lending is diversified across a wide number of industries.

Prudent portfolio management requires consideration of the following:

Overall Portfolio Limit. An overall portfolio maximum tied to the level of bank assets should be established, usually in the range of 2% to 5% of earning assets. As is true for other higher-risk activities, undue exposures suggest concern regarding whether the institution can absorb the risks involved.

Individual Transaction Limits. The maximum hold level in any individual transaction should be limited to between $25 million and $35 million. Syndication risk for larger commitments to be sold into the secondary market should be separately managed.

Diversification. The maximum industry exposure should not exceed 10% to 15% of the portfolio. An additional concern is geographical diversity, especially for regional banks.

Investment Instrument. Senior secured corporate debt instruments have historical recov-

COMMENT/*By Roger G. Powell*

Are We Caught in an Oddity Known as a Liquidity Trap?

Some don't fear the onset of recession. They are convinced that the Federal Reserve will see it coming and respond with easier money.

But there is an oddity in monetary affairs called a "liquidity trap." If we have fallen into a liquidity trap, then monetary ease will not work and interest rates may behave in an unpredictable fashion.

High-Powered Money

Easy money comes when monetary authorities provide commercial banks with plenty of raw material with which to make loans. That raw material is measured in banking-system reserves – high-powered or concentrated money. It is then diluted and packaged by banks into individual loans.

The bankers' profit motive allows us to rely on full use of the central bank's raw-material delivery and be confident that it will be diluted to the maximum allowed by reserve and capital requirements.

An Excess of Liquidity

But what happens if the commercial banks don't use the raw material? Only when banks aren't willing to lend or borrowers aren't willing to borrow does high-powered money sit unused. The economy would then have an excess of liquidity. Hence the liquidity trap.

Unusual interest rate behavior could be a side effect if a liquidity trap is operating. It seems clear that short-term rates should fall dramatically, though the risk premium might expand for each change in rating.

A Perverse Impact

What would become of longer rates? With a bond market still sensitive to potential inflationary pressures, the immediate impact might be perverse. The inventory of high-powered money available to the banking system could be seen as inflationary raw material, suggesting to investors that they should invest only at yields sufficient to offset losses of purchasing power that might arise from changes in currency values.

Effect on Yield Curve

If a liquidity trap is operating, then the near-term effect should be greater differences between short-term and long-term interest rates, at least in the short run. And greater monetary ease could fuel future inflation expectations, leading to higher, rather than lower, long-term rates.

Does the current combination of rising capital requirements, heightened regulatory discipline, asset-quality stress, and the expectation of a recession create a lineup that could lead us to this pass?

Rising capital requirements reduce the volume of loans fabricated from high-powered money. Difficult examinations and asset-quality stress lead bankers to reduce lending. And the expectation of recession influences both lender and borrower to hold back.

If banks don't lend and borrowers don't borrow, then ease won't work. A liquidity trap is, fortunately, rare and, unfortunately, perverse. ☐

Mr. Powell is an analyst wtth Alex. Brown & Sons, Baltimore.

HLT Loans Soar At First Chicago, Slide Generally

Continued from *page* **1**

said. "Banks are carefully managing their exposure."

At the end of the second quarter, the top 25 leveraged lenders had $68.948 billion in HLT loans outstanding, down from $70.174 billion in the first quarter. SNL did not provide data on the percentage of HLT loans that were nonperforming.

Citicorp Is No. 1

Citicorp held the largest HLT portfolio in the second quarter, $8.82 billion, although the ratio to assets was below the industry average.

Clearly, the growth of HLT portfolios slowed dramatically as the banks began to reclassify loans in February. Though federal regulators did not put limits on HLT lending, the wide range of definitions banks used persuaded regulators to define the term and require banks to classify separately all leveraged loans.

But the spigot had already been tightened by market forces, as the Campeau bankruptcy and the failed UAL Corp. buyout in October scared lenders and knocked the wind out of the market for subordinated high-yield debt.

Nevertheless, the reclassification has given bank analysts an occasion to scrutinize banks' assets more closely. Many analysts still fear that nonperforming loans could continue to rise in the banks' HLT portfolios.

And despite the increases in loan-loss provisions this year, some analysts say that HLT portfolios are not quite out of the woods yet.

"Given the number of deals in trouble or in need of restructuring, S&P expects a rough year ahead," Standard & Poor's Corp. analyst Tanya Azarchs wrote recently. "Nonperformers will rise beyond current levels, though perhaps in a bumpy fashion."

Banks are clearly in a bind

Data Source: All HLT data provided by **SNL Securities,** Charlottesville, Va., from its data base of 400 publicly traded commercial banking companies. **HLTs** are highly leveraged transaction loans. A "purpose test" has been developed by the federal regulators to define an HLT transaction. A bank holding company is considered to be involved in a highly leveraged transaction when credit is extended or investment is made in a business where the financing transaction involves the buyout, acquisition, or recapitalization of an existing business. In addition to this purpose test, one of the following criteria must be met for the transaction to be considered an HLT: (1) the transaction at least doubles the subject company's liabilities and results in a leverage ratio (total liabilities divided by total assets) higher than 50%; (2) the transaction results in a leverage ratio higher than 75%; or (3) the transaction is designated an HLT by a syndication agent. However, the federal regulators reserve the right to designate the credit an HLT when the credit meets the purpose test but is not covered by any of the three criteria above. The regulators will include all obligations of, and claims on, HLT borrowers, regardless of perceived credit quality or secured status. **Rank 3/31/90:** HLT data for March 31, 1990, were incomplete. Therefore, a true ranking of the top 25 as of March 31 were not available. The ranks shown for March 31 were generated by American Banker using the March data for the top 25 banks on June 30. **Note:** SNL Securities tracks publicly traded companies only. Thus, the four major foreign-owned U.S. holding companies— Marine Midland Banks, Inc., Buffalo, N.Y., National Westminster Bancorp, Inc., New York, Harris Bankcorp, Inc., Chicago, and First American Bankshares, Inc., Washington, D.C. — are not included in SNL's universe of banking companies from which the top 25 banks were drawn.

Rx for Top ROEs: Fees and/or Cheap Funding

By SANFORD ROSE

The most profitable bank holding companies in 1989 were those whose fortunes did not depend quite so much on lending money, according to data just released by the First Manhattan Consulting Group. The data show that banks pursuing a fee-based strategy and those whose prosperity rests primarily on sourcing cheap deposits earned higher and, in the case of the fee-based banks, appreciably higher median returns on equity than did the other types of institutions.

Comment

The New York-based consulting firm classifies banking companies by business mix rather than by size or location. Its analysis divides the largest 250 bank holding companies for which data are available into six distinct types of entities: fee-based banks, commercial financiers (middle-market commercial and real estate lenders), consumer intermediators, low-cost funders, money-center banks, and a residual category of undifferentiated intermediaries – that is, banks with no discernible balance-sheet or income specialty.

First Manhattan Consulting calculates an adjusted return on equity for each bank and for each peer group. The adjustments are for nonrecurring income and expenses as well as for differences in leverage. In other words, a bank's return is what it would have made without extraordinary items and if its ratio of average common equity to assets had been the same as the 1989 average of the top 250 holding companies.

Widening the Margin

Last year the fee-based banks outstripped all other peer groups, registering an adjusted median return on equity of 17.5%. That was 140 basis points higher than the second-ranked group of banks. Although the fee-based banks have been at or near the top in adjusted ROE for much of the last five years, their margin of superiority over the other peer groups was never greater than in 1989.

The place horse in the 1989 ROE derby was the low-cost funding group, which garnered a median ROE of 16.1%. The rise of this category of banks from a fourth-place finish in 1988 and 1987 to the second slot last year is symptomatic of the unquiet times.

As their name implies, the low-cost funders have access to

Tisch Family Buys Big Stakes In Three Banks

By KELLEY HOLLAND

While most investors are shunning bank stocks, a group representing the Tisch family has invested more than $65 million dollars in equity of three banks battered by the recent rout.

The investment group, FLF Associates, and members of the Tisch family now own 9.5% of the equity of BayBanks Inc., 6.8% of Equimark Corp., and 5.6% of Continental Bank Corp. All the stakes were bought in July and August.

Earlier Stake

The holdings are in addition to an 8.9% stake held by members of the Tisch family in Bank of Boston Corp.

The investment in the banks surprised a number of bank analysts.

Thomas K. Brown, an analyst at PaineWebber Inc., said, "With all due respect to a good investor, I don't know why you wouldn't put that amount of money into a few higher quality companies, with bank stocks being down as much as they are now.

"Instead, they've doubled their exposure in New England, and specifically in Massachusetts, at a time when it's going to

BNE Shares Bounce Back On Denial by Regulator

By TOM LEANDER
and ROBERT TRIGAUX

The stock of Bank of New England Corp. rebounded sharply on Friday following public assurances from federal regulators that none of the company's subsidiary banks were facing immediate seizure.

The Boston-based company's stock closed at $2.125, up $1.125, in extremely heavy trading on the New York Stock Exchange. More than 2.6 million shares changed hands, twice as many as on Thursday, when rumors of an imminent seizure flashed across financial markets.

That made it the most active bank stock Friday by a wide margin and the second most active issue on the exchange, behind only the Ohio Edison Co. The bank company's normal daily volume is about 225,000 shares.

Candidate Fueled Rumors

The rumors, which had started early last week, were fueled on Thursday when a congressional candidate from Massachusetts released a statement saying that the Federal Deposit Insurance Corp. had recommended the closing of the bank.

That prompted a categorical denial from regulators and Lawrence K. Fish, chairman of the banking company.

Bank of New England officials said that there were no unusual deposit withdrawals on Friday and that the bank was operating as normal.

The company's stock had fall-

Check Law Still Spurring Debate

By KAREN GULLO

NEW YORK — Bankers and the Federal Reserve Board plan to continue seeking changes in the law that shortens check holds, even though the final schedule takes effect today.

Proposals that would give banks more time to make funds available remain alive in Congress, and their proponents are optimistic that some action will be taken this year.

Regulation CC, which implemented the Expedited Funds Availability Act of 1987, remains a topic of debate, said a Fed staff member.

"We've persuaded enough people in Washington that there is a problem in the law and that unless it's changed, we'll have a big fraud problem," he said.

Bankers contend that the rapid availability of funds raises their risk of fraud because they

Big Banks Face Higher Tax Bills In Remote States

By KENNETH CLINE

A growing movement by states to tax financial institutions outside their borders could result in higher tax bills for money-center and superregional banks, industry experts warn.

Minnesota, Indiana, and Tennessee have already passed bills that tax banks selling credit card and other products to residents in those states but not chartered there. Several more states are considering the so-called market-state approach, including California, Massachusetts, Nevada, and Arizona.

ABA Seeks Moratorium

"The magnitude of the problem is just beginning to be perceived," said Henry Ruempler, director of taxation and accounting for the American Bankers Association. The trade group recently called on states to adopt a two-year moratorium on enacting or collecting market-state taxes on financial insti-

Big Banks' Market Value Stable in 2d Quarter

By KELLEY HOLLAND

This year has been one of the toughest in memory for banks, but by the measurement of market capitalization, bankers at the nation's 50 largest banks at least got a little bit of short-lived good news in the second quarter.

Those banks saw an increase of 0.1% in their market capitalization. The figures obviously do not include the significant drop in bank stocks in the last two months.

The growth in market capitalization – the price of a company's stock multiplied by the number of shares it has outstanding – indicates investors are willing to pay up for a bank's assets. A large market capitalization also makes acquisitions easier.

Gain Considered Misleading

But even this smattering of good news may not be for real. The increase in market capitalization between March 31 and June 30 was a fluke, analysts said.

"The most important thing was that the stocks had a tremendous but very short-lived rally right around the end of May," said Katherine R. Hensel, an analyst at Lehman Brothers Inc. In addition, "right at the end of the second quarter was when we had a real change in sentiment for interest rates."

Moreover, the increase in market cap from the beginning to the end of the quarter is misleading, Ms. Hensel said. The springtime spike in prices was brief, so comparing an average of daily closing prices for bank stocks in the second quarter to the same statistic for the first quarter would show a decline.

Larger Group Declined

Moreover, the market capitalization of a broader cross section of banks – the top 100 – declined an average of 1.1%. And bank stock prices have fallen sharply in the third quarter.

Investors began to differentiate more between strong and weak banks, according to John D. Crumrine, treasurer of Norwest Corp.

"In the first quarter, investors seemed to be negative on all banks," he said. In the second quarter, though, "there were increasing distinctions made between banks who are weathering the storm here and those who are having more trouble."

A combination of a more bullish interest rate outlook, a broad market rally, and banks' ability to increase their market capitalization through dividend reinvestment programs also bolstered many banks' market capitalization between March 31 and June 30, analysts said.

Republic on Top

The winner in the market capitalization sweepstakes for the second quarter was Republic New York Corp. Republic has long been highly regarded by analysts and bankers alike, and that high regard has been reflected in Republic's stock price.

Republic's stock price rose only 5.66% in the second quarter. But because the New York-based bank issued new stock to finance its acquisition of a savings bank, increasing its outstanding shares by 4.2 million, Republic's market capitalization increased 21.1%.

First Interstate Bancorp's market capitalization grew 21% during the second quarter, the second-highest rise. The Los Angeles-based bank issued new common stock late in the first quarter, which pushed its stock price down to just $34 per share as the second quarter began, making the change to the end-of-quarter price of $40.375 per share more impressive.

New Shares Issued

But the increase in market capitalization was also helped by First Interstate's issuance of new shares during the second quarter through its dividend reinvestment program. The bank "has had a pretty heavy DRIP program," said Donald K. Crowley, an executive vice president at Keefe, Bruyette & Woods.

Norwest's market capitalization also increased smartly, rising 20.1%. Norwest issued new shares during the quarter to finance its acquisition of First Interstate of Wisconsin, and its stock price also rose 9%, to $21.75.

"Absent a really severe national recession, I really don't think we're going to see a really severe change in the upper Midwest," said Ben B. Crabtree, an analyst at Minneapolis-based Dain Bosworth Inc.

STOCKS

BNE Rebounds on U.S. Denial

Continued from *page* **1**

en by 62.5 cents, to $1, on Thursday. But following the statements from regulators, the stock opened at $2 on Friday.

Analysts said short selling contributed to the heavy volume.

Little Confidence Detected

"There's still very little long-term confidence," said Charles Cranmer, an analyst for Shearson, Lehman, Hutton in New York.

"Thursday was an overreaction, and the company is trading Friday at a more normal levels," said Gerard Cassidy, an analyst for Tucker, Anthony & R.L. Day in Portland, Maine. "But it does not suggest that BNE is on the road to recovery."

The banking company has experienced heavy losses in recent quarters because of problems in its real estate portfolio.

On Friday, the Office of the Comptroller of the Currency again stated, as it had on Thursday, that there would be no closing over the Labor Day weekend of Bank of New England, the company's lead national bank.

Comment Not Unprecedented

While it is unusual for the Comptroller to comment on whether or not it would seize a troubled bank, it is not a unprecedented, according to Leonora Cross, chief spokeswoman for the agency.

"We've done this in other situations," she said. "It happened often with the banks in Texas" several years ago when a number of large institutions there were near collapse. "We are supervising the Bank of New England very closely under a cease-and-desist order. The bank is attempting to get additional capital," said Ms. Cross.

But the federal banking agency said it was not familiar with, and was not a planned participant in, the scheduled meeting today requested by Bank of New England Chairman Lawrence Fish with Federal Deposit Insurance Corp. Chairman L. William Seidman.

Flexibility May Be Sought

Mr. Seidman was on Cape Cod Friday and could not be reached for comment. Regulatory sources said they expected Mr. Fish to request greater flexibility in rules governing the sale of some of the holding company's assets.

In a statement Thursday night, Mr. Fish called the comments by the congressional candidate the "height of irresponsibility" and threatened possible legal action. The candidate, Ted Dimauro, issued an apology, saying his statement should have been labeled as "speculation." Mr. Dimauro's campaign manager subsequently resigned.

Bank of New England's actions in bank funding markets Friday suggest its liquidity is adequate. Sources said Bank of New England's subsidiary, Connecticut Bank and Trust, sold more than $500 million in Fed funds Friday morning.

Arthur H. Meehan, Bank of New England's treasurer, said in an interview that he is confident the bank has sufficient liquidity. "Funds are pouring in here," he said. "My problem is, as the balance sheet grows it strains the equity ratio," reducing the banks' regulatory capital ratio.

Mr. Meehan said the bank had repaid all its borrowings from the Federal Reserve Bank in June. "We don't owe the Federal Reserve Bank a penny, and we haven't owed them a penny since June 13," he said. He added that the bank was a seller of $1.6 billion in fed funds Thursday night.

Bank of New England has been virtually unable to buy fed funds in the open market since its troubles surfaced earlier this year, traders said. But Mr. Meehan said the bank has purchased some fed funds from its correspondent network and from "large, friendly banks."

Meanwhile, analysts said that efforts by Lazard Freres & Co. and Goldman Sachs & Co. to privately place $150 million in equity for the company will not readily yield any immediate buyers.

Investment bankers and analysts pondered how the bank, given its financial condition and the economy in New England, could attract investors.

Most agreed that convincing an equity investor to take a big stake alone would be difficult. Some said an equity investment in conjunction with government assistance was more likely and plausible.

Marshall Davidson, a managing director at Kidder Peabody & Co., said he suspected that without government assistance, the hole an equity holder would have to fill would be too large.

Kelley Holland and Fred Vogelstein, both in New York, contributed to this article.

RTC Moves to Seize Luxury Project in N.J.

By STEPHEN KLEEGE

The Resolution Trust Corp. has initiated foreclosure proceedings against Port Liberte in Jersey City, one of the most ambitious luxury housing projects ever begun in the New York metropolitan region.

The $158 million in loans outstanding on the property have been in default since March 1989, but the RTC began proceedings only last month.

The waterfront project, which ground to a halt last summer with only 189 of 1,690 planned units occupied, is the most notorious of the troubled real estate projects financed by City Federal Savings Bank, a $10 billion-asset thrift in Bedminster, N.J., that was seized late last year.

FIRREA Rule Blamed

Representatives of the developer, Paul W. Bucha, blamed the work stoppage at the time on stricter rules limiting an institution's loans to one borrower that took effect Aug. 9, 1989, with passage of the Financial Institutions Reform, Recovery, and Enforcement Act.

But City Federal explained its decision to stop funding the project by citing a July 1989 appraisal that concluded the project was not feasible.

City Federal, now called City Savings Bank, was the lead lender among 15 institutions that began sinking money into the project in 1984. The group, now numbering 13 institutions due to the failure of two members, holds a first lien of $90 million on the property. Proceeds of any sale would be distributed on a pro rata basis to those lenders.

City Federal and National Westminster Bank of New Jersey sank another $68 million into the project, but no one interviewed for this article believes the first $90 million can be recovered, much less any part of the $68 million that is subordinate to the first loan.

Stock Market Crash Hurt

The project ran into delays and cost overruns related to the construction of canals and the unusual design of some units. Observers also said the condo market was hurt by the 1987 stock market crash, although units continued to sell for as much as $750,000 last year.

City Federal placed the property in "in substance foreclosure," an accounting category that required it to write down $52.7 million of its $69.6 million in loans to Port Liberte in the third quarter of 1989. The savings bank lost $223.7 million in that quarter.

Delays and cost overruns hurt Port Liberte.

Mr. Bucha said an additional $20 million to $30 million was needed to complete and sell the entire 363-unit first phase of the project and put the loan back on a performing basis.

But the bank's appraisal estimated the existing part of the project was worth only $88 million, or about $70 million less than lenders had already committed. A more recent appraisal, for the RTC, valued Port Liberte at only about $70 million.

Some Welcome the Foreclosure

Some lenders welcomed the RTC foreclosure on Port Liberte because it will "get it closed and to a conclusion," said Lawrence W. Seidman, chairman of Crestmont Savings and Loan Association, Edison, N.J. He said Crestmont set aside reserves against its portion of the loan last year.

But Joseph M. Ochman, chairman and president of Interboro Savings and Loan Association, was dissatisfied by talk that the project may now recover only $20 million to $30 million for the lenders.

"This money didn't just go into a black hole," Mr. Ochman said, adding that he plans to request a federal investigation of the project and its handling.

Inter-boro has placed its part of the loan in the "doubtful" category, meaning it took reserves for half of its roughly $5 million share, Mr. Ochman said.

A Disgruntled Lender

"This is 20 months into default, and they just recently instituted proceedings," Mr. Ochman said. He complained that the possibility of multimillion-dollar environmental liability exposure is now being raised to discourage seizure of the property and pave the way for a quick sale at a low price.

But another source, who put the price now being considered at about $45 million, said an environmental audit of the site must be completed before any sale occurs. Discovery of chromium contamination in the area, and past industrial uses of the property, have heightened concerns about environmental liability. Under federal environmental law, such liability can sometimes pass to a lender who takes control of a property through foreclosure.

Marianne Bell, a spokeswoman for the developer, said, "With the threat of foreclosure, we have a limited amount of time." But she added, "We are working with investors and the RTC to refinance the project."

Ms. Bell said Port Liberte has permits to build 1,690 units, but she said new investors would probably want to build closer to 2,250 units, the maximum allowed under zoning rules. □

CAPITAL

Top Banks' Market Capitalization Held Steady Before Recent Plunge

Continued from *page* **18**

big declines in market capitalization. Many banks in the Southeast have been plagued by increases in nonperforming assets and chargeoffs this year, and bond rating agencies downgraded all the major banks in the region during the second quarter.

Southeast Banking Corp., Miami, recorded the biggest decline in market capitalization of any of the 100 largest banks, losing a third of its market value. The bank was downgraded in the second quarter.

"In our opinion, a convergence of negative forces was occurring, and we question whether the company has the financial flexibility to address its problems," said Gerard J. O'Meara, Jr., an analyst at Robinson-Humphrey Co.

Dominion Bankshares also lost 23.8% of its market capitalization. But Mr. O'Meara said Dominion's prospects are brighter than Southeast's. The bank's stock price was battered in the second quarter, when Dominion reported the results of its examination by the Office of the Comptroller of the Currency. But its second-quarter results indicate Dominion is back on track, he said.

First American Slides

First American Corp. continued its slide, losing 24.5% of its market value. The Nashville, Tenn.-based bank has had problems with its real estate portfolio since early 1988, losing a president and chief executive officer in the process. Most recently, the bank eliminated the dividend on its common stock in the wake of an OCC examination. □

Memo to OTS: Throw in Towel On Franklin

By SANFORD ROSE

Perhaps the most significant impact of Judge Dale Saffels' remarkable judgment vacating the conservatorship of Franklin Savings Association is that it will help safeguard the country from the well-known pendulum effect — the all-too-human tendency of regulators to oscillate from overleniency to overaggressiveness in an effort to preserve their jobs.

When this overaggressiveness is married to fundamental ignorance and deep suspicion of the novel and innovative, it can result in all manner of ill-conceived assaults on legitimate property rights.

Comment

Anyone reading Judge Saffels' 93-page opinion comes away with the notion that the Office of Thrift Supervision is tendentious and uneducated as well as arbitrary and capricious. The opinion is generously larded with the last two adjectives and comes close to employing the first two as well.

Saffels intimates that after some OTS employees in the Topeka, Kan., office were sharply criticized for their handling of the Silverado S&L case and placed in jeopardy of losing their jobs, they proceeded to launch an attack on Franklin at least in part because "Franklin had in its portfolio similar assets to those formerly held by Silverado."

Adds the judge: "This similarity probably slanted [one OTS analyst's] view against Franklin and Franklin's system of operations." In other words, there was a presumption of guilt by association with a collateralized mortgage obligation.

Ignorant, Inadequately Trained

In the judge's view, that analyst and others in the OTS's Topeka office felt that Franklin was far riskier than was the case because they were ignorant and inadequately trained. That's a serious failing, and one that we all recognize can lead to much mischief.

There is a tendency to fear and hate what we don't understand. And having attacked the object of that fear and hatred, we become committed to the attack, even to the extent of buttressing our efforts with highly questionable ammunition.

Thus, throughout the campaign to humble Franklin and its abrasive but talented chairman, Ernest Fleischer, the OTS kept demanding additional capital writedowns. One was for the contested value of certain tax

MasterCard Top Brand Name, Survey Finds

By YVETTE D. KANTROW

NEW YORK – MasterCard is the strongest brand name in the U.S. financial services industry and carries more consumer clout than major brands such as Birdseye, Clorox, and Band-Aid, according to a corporate identity consulting firm.

The credit card name ranked 65th in Landor Associates' ImagePower study, which assigns products "brand power" rankings based on both consumer recognition and esteem. MasterCard ranked 13 places ahead of Visa, even though more people carry Visa cards.

The two card associations were the only financial services firms to finish in the top 100 of the 2,000 names in Landor's U.S. ranking. Their long-time rival, American Express, came in at 149.

Part of Consumer's Psyche

The findings indicate that while they do not pack the same power of consumer legends like

Last Rap of Gavel May Be Near For Bank Capital Markets Assn.

By BARBARA A. REHM

WASHINGTON — The Bank Capital Markets Association may soon go out of business, a victim of industry cost-cutting and competition among trade groups.

Closing Called an Option

The association's directors have scheduled a meeting here Sept. 20 to determine its future. Folding the association, which mainly lobbies for repealing the Glass-Steagall Act, is one option being considered, according to the group's executive director, Thomas P. Rideout.

"What we are doing is looking at a range of options about our future," said Mr. Rideout, a former banker and past president of the American Bankers Association. "One of those options is to not stay in business. But no one is going into the meeting advocating that."

Asked if he is looking for a new job, Mr. Rideout said, "I can answer that question after the 20th."

If Bank Capital Markets does fold, it will be the first trade association to fall victim to the banking industry's current cost squeeze. But all banking trade groups are feeling the pinch as banks tighten their belts.

Gamble Failing, Abboud Seeks New Deal

By STEVE KLINKERMAN
and FRED VOGELSTEIN

A. Robert Abboud's high-stakes gamble to revive First City Bancorp. of Texas is falling apart.

When he bought the failing Houston-based banking company with $1 billion in federal assistance in 1988, Mr. Abboud wooed investors with promises of hefty interest payments on $125 million of convertible preferred stock, betting that rising values in First City's stock would enable him to convert the shares into common equity.

Earnings Below Projections

But Mr. Abboud is not meeting his ambitious earnings projections. First City's stock has fallen precipitously this year, making the conversion virtually impossible.

Peggy Turbett

A. Robert Abboud
First City Bancorp.

The stock was trading Tuesday at $17.50, down $1.625 for the day and well below the conversion price of $27.22. The stock's 52-week low is $17 a share and most analysts predict the stock will remain depressed.

"It was a stupidly structured deal and now they're paying the price," said Christoph Kotowksi, an analyst at Oppenheimer & Co.

Minority Investor Sought

Essentially conceding that First City is in need of a minor bailout, Mr. Abboud disclosed in an interview with the *Wall Street Journal* this week that his company is seeking a minority investor that would buy out the preferred.

The company also is shopping on Wall Street for debt financing to retire the cumbersome preferred issue, which investors can convert to an adjustable-rate security paying interest equal to the prime rate plus 6 points if the equity is not redeemed.

Quarterly interest payments on the issue currently amount to

Sovran Consultant Lands Senior Job at Merged Bank

By KENNETH CLINE

ATLANTA — Eileen Friars has parlayed a consulting assignment into a senior post at C&S/Sovran Corp.

As the senior vice president in charge of corporate development, Mrs. Friars, 40, will direct marketing, advertising, distribution systems and strategic and expansion planning at the $50.3 billion-asset C&S/Sovran, the nation's 13th-largest banking company.

For the past two years, Mrs. Friars had worked at Norfolk-based Sovran Financial Corp. as a consultant with the MAC Group of Cambridge Mass., her employer for 14 years. During her time with Sovran, Mrs. Friars helped the company design and implement a major strategic reorganization.

When Sovran merged with Atlanta-based Citizens and Southern Corp. last month, Mrs. Friars was placed in control of corporate development for the combined entity.

"Unlike most other consultants, she has demonstrated a great deal of interest in ensuring that the programs that are conceived are also implemented," said C&S/Sovran's chief operating officer, Dennis C. Bottorff. "It was obvious Eileen Friars was a unique match for that position."

Eileen Friars

Mr. Bottorff cited Mrs. Friars' "participatory management style" as being appropriate to the "collaborative" corporate culture C&S/Sovran is trying to build. He also complimented her technical skills. "She's got a great deal of broad knowledge about the industry," he said.

'A Great Opportunity'

Mrs. Friars said she was sad to leave the MAC Group, which she described as "a special place" that lets employees grow and develop, but added, "There's such a great opportunity here at C&S/Sovran that I find that at this point in my career, that's exciting and I'm looking forward to it."

Although she is conscious of her status as one of the rare women to achieve a high corporate position in the banking industry, Mrs. Friars said her sex has never been an obstacle to her career. "I've always looked at it as, I like to do a good job at what I'm doing and if I do that and make a contribution, I seem to keep moving onward and upward," she said.

"I want to set a good example. There are a lot of good women coming up in the industry who can play a major role and, over time, that will happen," she said.

Background in Economics

Mrs. Friars has an undergraduate degree in economics and government from Simmons College and an MBA from the Harvard Business School. She recently served as president of the Harvard Business School Club of Chicago. She has also served on the board of regents of the Bank Marketing Association.

She joined the MAC Group in 1976 and rose to become a senior vice president, head of the firm's Chicago office, and co-director of its financial services industry practice. Her specialty is managing strategic and organizational change and marketing. ☐

Security Pacific's Chief Economist Taking Same Post at Exxon Corp.

By LINDA CORMAN

WASHINGTON — Kathleen B. Cooper, executive vice president and chief economist at Security Pacific Corp. for the past nine years, and widely mentioned as a candidate for Federal Reserve Board governor, will leave the bank Friday to become chief economist for Exxon Corp.

"It was an opportunity too good to pass up," Ms. Cooper said Wednesday in an interview.

"After my first 10 years in the banking industry, I had expected to stay in it the rest of my life," she said. "I obviously will miss it." Before joining Security Pacific, Ms. Cooper was corporate economist and then chief economist for United Banks of Colorado.

She is chairman of the American Bankers Association's economic advisory committee and a director of the National Bureau of Economic Research.

Ms. Cooper, who has a Ph.D. in economics from the University of Colorado, said she decided to join Exxon because "it's a new challenge in an industry that's very important for the economy."

She said she was eager to return to Dallas where she grew up and where Exxon recently moved its headquarters. "It's home for me. I've been gone for 20 years."

Ms. Cooper declined to comment on whether she had been or continued to be interested in a seat on the board of governors. ☐

Deposits Edge Up at Major Banks

Growth Is Slow Despite Buyouts

By JED HOROWITZ

Largest Thrifts Acquired by Banks

First six months of 1990, thrift deposits as of yearend 1989

Thrift/ **Acquiring bank**	Deposits ($ mil.)

Royal Palm Federal Savings, West Palm Beach, Fla. **Barnett Bank of Palm Beach County, West Palm Beach**	375

Source: American Banker

NEW YORK — On the face of it, the past 12 months should have seen a boom in deposit growth at the nation's commercial banks.

The thrift industry was on its knees and the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 guaranteed that there would be a surplus of deposit-heavy thrifts ripe for picking by banks.

In fact, bank deposits have grown at a snail's pace, according to the *American Banker*'s semiannual review of deposit and assets at the nation's 300 largest banks. (Tables showing the largest banks are on pages 18 to 23 and 26 to 28.)

Deposits Up Only Slightly

Deposits of the top 300 rose by $37 billion, or 2.3%, in the first six months of 1990, and just over 6% for the 12-month period that ended on June 30.

Assets, which many banks are seeking to shed in light of increased capital requirements, grew 2.8% in the first six months of 1990 and 6.1% over the year at the top 300 banks.

The relatively slow deposit growth reflects a sluggish economy that curbed loan demand and the consequent need for cheap funding, analysts said. It also testifies to the regulatory and legislative obstacles imposed on potential acquirers of banks and thrifts.

Most Gains from Thrift Deals

To be sure, purchases of thrift deposits accounted for about 72% of the growth in the first half of the year. And bank holding companies have purchased about 205 thrifts outright since the thrift-reform legislation was passed in the summer of 1989. But bank lawyers and analysts say the total would be substantially higher were it not for regulatory and legislative obstacles.

Chief among these are the the difficulty of converting thrifts to banks and the heightened capital and examination standards imposed by the Federal Reserve Board on potential bank acquirers, according to H. Rodgin Cohen, a lawyer at Sullivan & Cromwell.

"Without debating the merits of the Federal Reserve's capital standards, the consequences are not debatable," Mr. Cohen said at a meeting of bank chief financial officers earlier this week. "A number of bank holding companies are now out of the acquisition business – for thrifts and everything else."

Standards Are Tougher

Mr. Cohen said the Fed requires buyers of thrifts to meet more stringent capital standards than those imposed under the three sets of published capital guidelines – those dealing with primary capital, risk-based capital, and leveraged capital.

Banks interested in buying

Corrections

An article published Tuesday ("Progress in Assessing Payment Risks," page 3) incorrectly said that Continental Bank Corp. was among the sponsors of a Bank Administration Institute study.

Also, Chemical Banking Corp., New York, should have been listed as a sponsor.

■

An item in the Sept. 5 "Grapevine" column (page 2) reported that Ryan, Beck & Co., an investment bank based in West Orange, N.J., had closed its California office. The office is not closed.

MARKETING/ADVERTISING

Welcome to the World of 'Frequent-Flier' Banking

By LAURYN FRANZONI
Special to the American Banker

Bankers seeking to build relationships with their most valued customers may find a way in the marketing tactics of the travel industry.

Some bank marketers argue that the methods used by airlines, hotels, and theme parks are not applicable to banks, which provide a steady stream of service. But Richard Barlow, a marketing consultant in Cincinnati, says banks' successes with mature-market programs illustrate the opportunity for variations on the popular frequent-flier plan.

Building Customer Loyalty

In frequency-based programs, banks reward frequent users of their products and nudge customers to use the institution for multiple services. The objective is customer loyalty.

"It's one of those tactics that is about to burst open in the banking industry," predicted Mr. Barlow, a former American Express Co. executive who has been developing frequency-based marketing programs for First Chicago Corp.'s card division, Sheraton Hotels, Procter & Gamble, and retail chains.

Mr. Barlow says the marketing programs Citibank has begun for its credit cards embody some characteristics of frequency marketing programs. Enhancements include a package of services built around discounts and delivered by arrangement with outside suppliers. The program, known as CitiBenefits, has subsets of awards for people who use the card often for dining, travel, or shopping.

In addition, the bank offers CitiDollars, which are points accrued by cardholders that can be cashed in for merchandise discounts.

Fifth Third's Program

The Fifth Third Bank of Cincinnati uses a combination of discounts and real-value awards to lure customers over the age of 53 into multiple relationships with the bank. Club 53 Members receive free travelers checks, money orders, and notary services; and discounts on safe deposit rentals, securities trades, installment loan rates, and credit card fees. Another popular benefit is a bonus interest rate of one percentage point on fixed-rate certificates of deposit.

Mr. Barlow says Citibank and Fifth Third could improve their success rate. He recommends tracking customer accounts to develop a data base that would be used when making customer contact.

Adding Benefits from Outside

Banks are getting better at packaging related financial services but lag in adding benefits from outside, Mr. Barlow says. Because banks have broad customer bases and interactive retail delivery systems, they are in an enviable position to deploy such programs, he says.

For example, ATMs might be programmed with a message offering a discount on auto maintenance at a local service station. Banks could develop programs that would simultaneously give a retail customer a discount and help build traffic for a commercial customer.

Why choose a NAMS marine surveyor?

Do you want to buy, sell, insure or assess the damages of a boat or yacht? The best way to protect your interests is to make certain the marine surveyor you select is NAMS certified.

Today, the National Association of Marine Surveyors (NAMS) is the only national group in the U.S. which has set standards of competence for its members. NAMS surveyors can be found throughout the U.S. and in several foreign countries.

NAMS members must have a minimum of five years of marine surveying experience. They are professionally examined in the area of their specialty, must operate within a strict Code of Ethics, and must be constantly updating their professional knowledge through recertification.

Unlike many professions, there is, with one exception, no licensing of marine surveyors. Anyone who proclaims to be a "licensed" marine surveyor may have a Coast Guard license to operate a boat, a mercantile license, etc. It will not be a license for competence in marine surveying.

One of the best ways to protect your boating interests is with a NAMS certified marine surveyor.

For more information about NAMS, write the National Association of Marine Surveyors,
305 Springhouse Lane,
Moorestown, NJ 08057.

For a NAMS surveyor in your area dial toll free:

Source: Landor Associates

Continued from *page* **1**

Coca-Cola, Campbell's, and Disney – which took the top three spots – the credit card companies have become part of the consumer's psyche.

"When you look at financial services in the U.S., it's a very segmented business," said Stewart Owen, Landor's director of research. "The credit card is the only financial service that is sitting in everyone's pocket."

The fact that they fared better than American Express is also significant, given American Express Co.'s heritage and advertising budget. The company has a corporate history dating back about 140 years, while MasterCard and Visa are barely 20 years old.

American Express is also believed to spend four to six times more on advertising than the bank card groups, which rely heavily on promotional efforts by member banks.

"If you looked solely at a high-income audience, American Express would come out stronger," Mr. Owen said.

The Landor study was designed to reflect brand power among a cross-section of the population, Mr. Owen explained, thus helping the bank card performance.

Landor Associates, based in San Francisco, contacted 5,000 consumers from 48 states to evaluate the strength of 6,000 brand names. In addition to a brand or ImagePower ranking, each brand received a "share of mind" ranking, reflecting its recognition among consumers, as well as an esteem ranking.

Visa Leads in World Survey

The firm also surveyed 4,000 consumers in Europe and Japan. Based on the 9,000 consumers surveyed worldwide, Visa is the top name in financial services, with a brand power ranking of 41. American Express is the next financial firm on the worldwide list, ranking 44th. MasterCard ranks 92d.

In the domestic study, financial services firms generally received lower marks for esteem than recognition. Citibank finished first among banks in the survey. It received a brand power score of 639 and esteem score of 1,020.

"Financial services have in general not had a great two or three years," Mr. Owen said. "This has been a very troubled category."

Other banks on the list of total brand power include Citicorp, Citibank's parent, at 727; Wells Fargo, 841; and Bank of America, 853. Unlike the credit card organizations, individual banks and other financial companies tend to advertise regionally and focus on businesses less meaningful to the entire population.

"Intellectually, you would have to take the awareness that a bank has in its hometown and compare it to how other entities rank on a national scale," said Steven Rivkin, president of Rivkin & Associates, an image consultant in Midland Park, N.J.

Boost for Marketing Plans

For MasterCard International, the findings are a seal of approval on a new marketing strategy designed under president Alex W. Hart. Rather than try to overcome Visa U.S.A.'s leadership in cards outstanding, Mr. Hart has chosen to promote the strength of the MasterCard brand name.

"This is exactly what we've been telling our members all year long," said Peter S.P. Dimsey, executive vice president of marketing and advertising for the New York-based association. The theme of MasterCard's annual meeting was "strike up the brand."

Even the credit card companies, which enjoy high name recognition, perform less well in terms of esteem. MasterCard, which ranked 27th in consumer familiarity, or share of mind, came in 165th in esteem. Visa ranked 42d in share of mind and 140th in esteem.

Competing on Value

"We spend less to establish our prestige," said Mr. Dimsey of MasterCard. "We compete more on value."

A spokesman for Visa U.S.A. in San Mateo, Calif., questioned whether MasterCard's brand is more powerful than Visa's. "All our studies show that we lead overall," he said. He also cited a recent study of 1,000 consumers conducted by Total Research Corp., Princeton, N.J., that ranked the Visa name the 18th in the country and the MasterCard brand 27th. □

The Bank Rate Monitor Index is the average of rates being charged by the 100 largest banks and thrifts in the nation's 10 largest markets on the dates indicated. Other rates quoted are the lowest and highest offered at the same institutions. Auto loan rates are for a $9,000, 48-month, new-car loan with a 20 percent down payment. Personal loan rates are for a $3,000 unsecured personal loan with a 24-month term. Credit card rates are fixed rates only and do not take into account differing annual fees or grace periods.

Lawmakers Are Paving Way for Further FDIC Rate Hikes

Continued from *page* **1**

bank deposits would decline to 0.50% of insured deposits by 1995, 20 basis points below the record low coverage of 0.70% at the end of 1989.

Budget office projections showed more than 600 banks would fail between the start of 1990 and the end of 1993, costing the insurance fund an estimated $21 billion.

The outlook was even bleaker than the one presented on Tuesday by the General Accounting Office, based on yearend 1989 data. The GAO said 35 relatively large banks were close to failure, and that the Bank Insurance Fund coverage ratio in 1995 would be between 0.69% and 1.07%, depending on bank failure rates and other economic factors.

In light of the reports, Senate Banking Committee Chairman Donald W. Riegle Jr., D-Mich., said he is drafting legislation that would lift all restrictions on the FDIC's ability to raise premiums.

Only a month ago, the FDIC proposed raising premiums in 1991 from a previously planned 15 cents per $100 of insured deposits to 19.5 cents, but agency Chairman L. William Seidman has hinted lately that yet another increase is necessary. The industry now pays 12 cents per $100; the 7.5-cent increase would be the largest one-year hike allowed under current laws.

Sen. Riegle wants to lift restrictions on raising FDIC premiums.

Deposit Transfer Proposed

Rep. Frank Annunzio, D-Ill., chairman of the House Banking subcommittee on financial institutions, introduced a bill that would require banks to transfer 1% of their deposits to the FDIC's Bank Insurance Fund. Mr. Annunzio has scheduled a hearing for Sept. 27 and said he plans to ask the subcommittee to vote on the bill shortly thereafter.

"There is a good chance that Congress will do something along the lines of what Sen. Riegle is proposing," said Edward L. Yingling, director of government relations for the American Bankers Association.

Political Pressures

If Congress grants Mr. Seidman authority to raise premiums, Mr. Yingling added, "it will be very difficult politically for him not to."

Despite the industry's concern over Sen. Riegle's proposal, efforts to oppose that kind of bill would probably be futile, he said.

If Congress lifts restrictions on the FDIC, many observers believe the agency would raise bank premiums to 23 cents per $100 of insured deposits, the same rate at which thrifts are assessed.

A day before Mr. Reischauer's appearance before the Senate Banking Committee, the GAO, another congressional agency, projected that the coverage ratio in 1995 seemed certain to remain well below the $1.25 per $100 of insured deposits mandated in last year's thrift-bailout law.

GAO also warned that the fund would be unable to handle a rash of large bank failures.

In his appearance on Wednesday, Mr. Reischauer said the CBO expects 631 banks to fail from 1990 through 1993. Significantly, of those banks, 295 banks now hold at least 6% in capital.

Caution Urged

The budget office director also warned legislators and regulators to exercise caution in assessing premiums and not undermine the strength of many banks.

Rep. Annunzio introduced a measure that would require banks to transfer 1% of their deposits to the FDIC's Bank Insurance Fund.

"You might be careful on that score," he said. "In the short run, you don't want to push some weak banks over the brink."

For bankers, the prospect of increased premiums raises a number of troubling questions. First, many believe the industry is reaching the limits of what it can afford.

But the question is also likely to prove divisive within the industry. The Independent Bankers Association of America argues that as premiums rise, large institutions will shift their funding sources into foreign branch deposits and nondeposit liabilities. Neither of these are assessed premiums, but they have traditionally been covered by FDIC insurance.

As a result, "as premiums go up, it becomes critical for the FDIC to have as broad an assessment base as possible," said Stephen Verdier, a congressional lobbyist for the Independent Bankers Association.

Opposition Likely

Large institutions would vehemently oppose any effort to bring foreign branch deposits and other liabilities into the assessment base, however.

With the insurance fund looking weaker by the day, members of Congress are scrambling for other means to boost the FDIC's reserves.

Sen. Alan Dixon, D-Ill., proposed Wednesday that interest on the reserves banks maintain with the Federal Reserve be transferred to the FDIC. Currently, the Fed pays such interest

Big Banks' Deposit Growth Slow Despite Thrift Availability

Continued from *page* **2**

thrifts or other banks must have a tangible leveraged equity-to-asset ratio of between 4.5% and 5.5%, a number that excludes not only goodwill but other intangibles that are acceptable under the published guidelines. The lower amount of capital applies only to banks where substantially all the bank's equity is common equity, Mr. Cohen said.

Moreover, the Fed has an acquisition policy that virtually disqualifies any bank company with an overall Camel rating or Community Reinvestment Act rating of 3 or worse from buying a thrift or bank. "Camel" refers to examination ratings based on the quality of a bank company's capital, assets, management, earnings, and liquidity. The higher the number, the worse the rating.

Many Excluded

"The end result," Mr. Cohen said, "is to disqualify scores of potential purchasers."

Although 19 of the 300 largest banks in the first half of the year acquired deposits from 26 thrifts, other factors such as consolidation of subsidiary banks also played a role in deposit growth.

First American National Bank of Nashville topped the list of gainers in the past six months with a 148% jump in deposits because its holding company merged eight of its Tennessee banks into the Nashville unit. The fourth-largest gainer, Norwest Bank Des Moines, similarly saw deposits rise by 131% because of consolidations with sister banks in Iowa.

The Fed requires buyers of thrifts to meet more stringent capital standards than those imposed under published capital guidelines.

Mellon Was Purchaser

Mellon Bank (East), which placed third on the list of gainers, took the most publicized route to its 131% deposit rise. It purchased 54 offices from Meritor Savings Bank and its PSFS unit in May. Mellon also has announced plans to consolidate four other Pennsylvania banks into the Mellon East unit.

Bank of America, San Francisco, the nation's second-largest bank, gained more than $2 billion of deposits. The gain was fueled in part by the purchase of two California thrifts, First Federal Savings and Loan and Guardian Federal Savings and Loan, in the first half.

Its parent's largest purchase, the $4.1 billion-deposit Western Savings and Loan Association in Phoenix, was moved into the newly created Bank of America, Arizona, which ranked 151st among the top 300 banks as of June 30.

Earlier this month, BankAmerica also won a spirited bidding contest with Security Pacific Corp., its chief rival in the Western Savings auction, for Oregon's Benj. Franklin Savings and Loan.

Security Pacific Gains

Security Pacific National Bank of Los Angeles, for its part, saw its deposits soar 13% and its place in the ranking jump two slots to fourth place because of its California thrift purchases – Gibraltar Savings and Washington Savings and Loan Association.

The search for selective acquisitions and consequent deposit gains in selected regions is not surprising, analysts said.

"If you go through every superregional bank in every key state, you'll find almost all have been active acquirers," said James McDermott, a bank analyst at Keefe, Bruyette & Woods. "It's one of the cheapest way to expand market share and pick up relatively low-cost deposits. It reduces reliance on more sensitive purchased funds."

Bank of New England Off

On the other side of the coin, Bank of New England Corp.'s banks were among the biggest deposit losers. The troubled institution experienced a flood of withdrawals by depositors early in the year, when news of their weak capital came to light.

Some deposits have been replenished in recent months through an aggressive offering of high-yielding certificates of deposit. But in the first six months, BNE's Connecticut Bank and Trust Co. and Bank of New England-West were among the top four deposit losers, slimming down by 16.5% and 15% respectively. Bank of New England, the company's flagship Boston bank, lost 11.4% of deposits.

Among the top 20 banks in the nation, 14 registered deposit growth. Citibank NA, the nation's largest in both assets and deposits, added about $5 billion of deposits in the first half of the year, bringing its total to $116.5 billion. Most of the growth derived from routine retail activities, such as certificates of deposit, a bank spokesman said.

Modest deposit losses were registered by Chase Manhattan Bank, Marine Midland Bank, Continental Bank, First Interstate Bank of California, and Republic National Bank of New York. Mellon Bank, Pittsburgh, saw its deposit base drop 15% to $12.8 billion and its rank fall from 17 to 20 among the top 300 banks – in contrast to the growth at its sister Philadelphia-area bank.

"It primarily represents a drop in foreign deposits, which took place as part of our strategy in acquiring the PSFS branches," said J.T. Tuskan, a Mellon spokesman. ☐

Data Source: American Banker questionnaire. The data requested are consolidated for the bank and its domestic and foreign subsidiaries. American Banker requests deposit data as reported on the Federal Regulatory Report of Condition (RC-Balance Sheet, items 13a plus 13b), whenever possible. Data may not be comparable with other periods because of mergers, changes in accounting practices, etc. In the case of mergers, the bank under whose charter the merger took place is considered the surviving bank. **(a)**— Acquired two thrifts during the first half of 1990. **(b)**— Acquired one thrift during the first half of 1990. **(c)**— Acquired three banks in the first half. **(d)**— Acquired 13 banks and five thrifts in the first half. **(e)**— Acquired the $2.1 billion-deposit Marine Midland Bank (Delaware) NA on March 31. **(f)**— Acquired three banks and a thrift during the first half and changed title from National Bank of Detroit on May 1. **(g)**— Acquired the $6 billion-deposit Florida National Bank on March 1. **(h)**— Acquired the $3.4 billion-deposit Equitable Bank NA on June 30. **(i)**— Acquired one bank during the first half. **(j)**— Acquired two thrifts and three banks. **(k)**— Acquired three affilated banks. **(l)**— Changed title from Mellon Bank (East) NA on May 19. **(m)**— Changed location from Malvern on May 22. **(n)**— Acquired eight affilated banks. **(o)**— Acquired $1 billion in deposits from the failed National Bank of Washington on Aug. 10. **(p)**— Acquired four affilated banks. **(q)**— Acquired the $3.6 billion deposit Team Bank NA, Fort Worth, and changed title and location from Deposit Guaranty Bank, Dallas, on Feb. 1.

Data Source: American Banker questionnaire. The data requested are consolidated for the bank and its domestic and foreign subsidiaries. American Banker requests deposit data as reported on the Federal Regulatory Report of Condition (RC-Balance Sheet, items 13a plus 13b), whenever possible. Data may not be comparable with other periods because of mergers, changes in accounting practices, etc. In the case of mergers, the bank under whose charter the merger took place is considered the surviving bank. **(a)**— Acquired one bank during the first half of 1990. **(b)**— Changed from a national to a state chartered bank on June 22. **(c)**— Formerly Key Bank NA. Changed title when it acquired the $961 million-deposit Key Bank of Southeastern NY NA, Newburgh on March 9. **(d)**— Acquired one thrift institution in the first half. **(e)**— BankAmerica Corp., San Francisco, formed the bank on June 1, to acquire the former Western Savings & Loan Assn. FA from the RTC for $81 million, or 4.6% of core deposits. **(f)**— Acquired a bank and a thrift during the first half. **(g)**— Formerly Trustcorp Bank. Changed title on Jan. 2. **(h)**— Acquired three banks during the first half. **(i)**— Formerly Norwest Bank Iowa NA. Change title on Jan. 1, when it acquired nine affiliated banks.

Data Source: American Banker questionnaire. The data requested are consolidated for the bank and its domestic and foreign subsidiaries. American Banker requests deposit data as reported on the Federal Regulatory Report of Condition (RC-Balance Sheet, items 13a plus 13b), whenever possible. Data may not be comparable with other periods because of mergers, changes in accounting practices, etc. In the case of mergers, the bank under whose charter the merger took place is considered the surviving bank. **(a)**— Acquired one bank during the first half of 1990. **(b)**— Acquired six affiliated banks on Jan. 1. **(c)**— Acquired two branches of a failed thrift in June. **(d)**— Changed from a national to a state chartered bank on June 15. **(e)**— Acquired one thrift institution in the first half. **(f)**— The bank failed in August. Riggs National Bank, Washington, D.C., acquired $1 billion of the bank's deposits. **(g)**— Formerly First Bank NA-Billings. Acquired 10 affilated banks and changed title on Jan. 1.

Equimark Expects Smaller Loss in 3d Quarter

Reuters

PITTSBURGH — Equimark Corp. expects to post a loss for the third quarter, but a substantially smaller one than in either of the first two quarters of the year.

Asked when Pittsburgh-based Equimark would return to profitability, chairman Alan Fellheimer told reporters, "Not in the third quarter."

"We still have those consumer losses bubbling through," he said. "But it's not going to look anything like the first or second quarter."

Real Estate Problems

The $3.5 billion-asset holding company lost $31 million in the first half of the year, largely because of problem real estate and consumer loans. Mr. Fellheimer, whose remarks came after a luncheon speech on Tuesday, said it is too early to predict results for the fourth quarter.

The chairman, who last week announced plans to step down as soon as a replacement is named, said he had just come from a meeting with federal bank examiners. He said their review of Equimark's loan portfolio was "going well."

Mr. Fellheimer said examiners had finished their review of the company's Philadelphia banking unit, $688 million-asset Liberty Savings Bank. "We did real well. We were really pleased," he said.

Mr. Fellheimer also said that he views an investment made by New York's Tisch family in Equimark as "a good thing." The Tisch family holdings, through FLF Associates, became public last month after the stake reached 6.8%.

Calling them friendly investors, Mr. Fellheimer said he knows the Tisch family through contacts made while he was seeking investors during his failed attempt to acquire National Bancshares Corp. of Texas from the Federal Deposit Insurance Corp.

Mr. Fellheimer dismissed speculation that he was under any pressure to step down as chairman. He said that as Equimark's second-largest stockholder, "I felt the company needed a different kind of manager."

The chairman, a lawyer by training, earned his reputation as a hard-nosed loan collector, a role he played during the successful turnaround of Equimark's main subsidiary, Equibank, in the mid-1980s. But he has never been content as a day-to-day banking manager. ☐

Lawmakers Push For Rate Hikes

Continued from *page* 16

to the Treasury at yearend. But because of the peculiarities of federal budget accounting, Mr. Dixon's approach would involve only a bookkeeping transaction that would not increase the federal deficit.

Mr. Yingling said the ABA is already taking a close look at the Dixon proposal, and would likely support it.

Credit Union Model

Mr. Annunzio's proposal, which would recapitalize the Bank Insurance Fund along the lines of the Credit Union Share Insurance Fund, also may find some support in the industry.

The measure introduced Wednesday would require banks to place 1% of their total deposits with the FDIC, but it would permit institutions to count the deposit as an asset on their books.

In a Sept. 6 letter to House Banking Committee Chairman Henry B. Gonzalez, D-Tex., Mr. Seidman cited that approach as one "that appears to merit consideration."

Mr. Seidman said the credit union model has at least two potential benefits. First, more resources would be made available to the bank fund.

Also, "banks might have a stronger incentive for self-policing of the industry if the stakes were a tangible component of their balance sheet," he added.

Gloomy Conferees

The CBO report on the health of the bank insurance fund, coming on the heels of an equally grim report from the General Accounting Office on Tuesday, added to a sense of gloom at a gathering this week of top bank lobbyists.

The American Bankers Association's bank leadership conference, meeting in Washington, reflected the industry mood, according to one participant. This source, who asked not to be named, said banks are feeling increasingly beleaguered by premium increases and calls for tougher regulation.

Mr. Yingling of the ABA described the mood as one of concern that lawmakers are overreacting to the S&L crisis. "There is real concern that Washington is overreacting, with heavy new regulation and heavy new insurance costs, all because of the S&L crisis," he said. ☐

Woman Is Indicted In Embezzlement

BOSTON — A federal grand jury returned a 22-count indictment against a Revere, Mass., woman that accuses her of embezzling funds from Bank of New England.

U.S. Attorney Wayne A. Budd in Boston said Lyn L. White, 23, transferred bank funds into her personal account in transactions between January 1989 and June 1990.

If convicted, Ms. White faces up to 20 years incarceration and $1 million in fines, Mr. Budd said. ☐

Banks Aren't Rushing to Buy New IBM Line

By KAREN GULLO

ANALYSIS: *Follow-up on the news*

NEW YORK — If International Business Machines Corp. delivers on the promises for more powerful hardware and new software it made last week, bankers may eventually be able to speed processing, improve customer service, and reduce operating expenses.

But the key word is "eventually."

Bankers whose institutions rely on IBM's most powerful mainframes said they are not speeding up plans to upgrade computer systems despite the long-awaited announcement. These bankers said they would not buy new computers for two years – long after the more powerful mainframes become available.

Some bankers said IBM's new mainframe line is simply not innovative enough to prompt immediate purchases. Others noted that the IBM software that most excites bankers, including improved security, data base management, and systems control, is at least two to four years away.

"The announcements had to be somewhat disappointing to bankers because they are more directional than substantive," said Frank Gens, vice president at Technology Investment Strategies, a research firm in Framingham, Mass. "IBM is basically telling bankers to sit tight over the next two to four years, which may give some comfort, but it means they will have to continue looking outside IBM for those solutions."

Market Share Concerns

IBM's announcement, which included 140 products, was the first unveiling of a major mainframe line in 10 years. The computer giant is counting on the new line to increase its market share, which has eroded as companies shift to distributed computing and as competition intensifies with lower-priced Japanese mainframes.

Though Fleet/Norstar Financial Group Inc. does not plan to alter its investment plans, it welcomed the new direction from IBM.

"We're glad to see IBM continue to make available more mips [millions of instructions per second, a measure of computing speed] and power," said Michael Zucchini, executive vice president and chief information officer at Fleet/Norstar. "Now, we have an upgrade path, and that will help us do consolidations" of data centers and oth-

Management, Collection Systems Get Credit for Lower Card Losses

By YVETTE D. KANTROW

NEW YORK — As concerns mount about the quality of consumer credit, the nation's top card banks are becoming more adept at managing their card portfolios, according to an *American Banker* survey.

Among the top 100 card banks, chargeoffs as a percentage of credit card loans outstanding dropped to 2.9% at the end of 1989, from 3.1% at the end of 1988. (The chargeoff figures are included in tables showing the largest bank card issuers, on pages 16A and 20A-23A.)

Controlling Losses

Bankers' ability to keep such losses under control is expected to help the credit card business

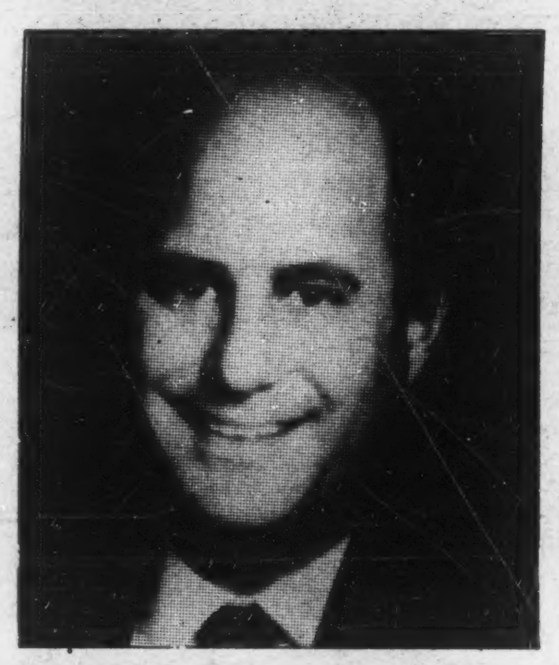
First Gibraltar of Texas Expected To Acquire Failed Oklahoma Thrift

By STEVE KLINKERMAN



Ronald O. Perelman
MacAndrews & Forbes

DALLAS — Ronald O. Perelman's First Gibraltar Bank late Friday was expected to announce it had acquired the failed Sooner Federal Savings Association of Tulsa, Okla., becoming the first Texas institution to make a major out-of-state acquisition.

Terms of the transaction were not immediately available, but sources said First Gibraltar would acquire a substantial portion of Sooner's $1.3 billion in assets from the Resolution Trust Corp. First Gibraltar and RTC officials were unavailable for comment.

As of March 31, Sooner's portfolio included $400 million of mortgage-backed securities and $470 million of housing loans, according to data from Ferguson & Co. "It was not a

Accounting Proposal Still Alive Despite Panel's Move

By KELLEY HOLLAND

The banking industry won a major victory last week by beating back an accounting proposal that would have sharply increased banks' earnings volatility, but another battle over the issue still looms.

A committee of the American Institute of Certified Public Accountants last week postponed a vote on the proposal, which would require banks to report at the lower of cost or market value a greater proportion of their investment portfolios.

But a spokesman said the accounting group is continuing to study the idea and could take it up again at a December meeting.

Meanwhile, regulators at the Securities and Exchange Commission are still interested in having banks use more market value accounting for investment portfolios on their financial statements.

As a result, there is still a chance that banks' financial reports could have quite a different look as early as 1991.

"The issue is not dead," said Henry Ruempler, director of tax and accounting at the American Bankers Association. But for now, "at least you have an AICPA committee that is recognizing the difference of what they originally tried to do," he said.

Currently, banks report their trading portfolios on a mark-to-market basis, while their investment portfolios are reported at historical cost.

Disclosure of Losses

The committee did vote to require banks to disclose unrealized gains and losses from their investment portfolios in the footnotes of their financial statements.

"I'd characterize it as a recognition that this is a difficult issue and it's better to make sure

1st Interstate's Carson Faces Twice-Wary Analysts

By SAM ZUCKERMAN

SAN FRANCISCO – Few large banking companies have disappointed investors more in recent years than loss-plagued First Interstate Bancorp. So what was billed as Edward M. Carson's first road show since he became chairman and chief executive last spring was a little like Daniel's visit to the lion's den.

Late last year, First Interstate's then chairman and chief executive, Joseph J. Pinola, was reportedly raked over the coals by investors at a Boston meeting after the company had announced a $400 million addition to loan loss reserves without warning.

"I'd like to try to convince you that we're not a bunch of idiots," Mr. Carson said last week, getting straight to the point, during his remarks at the Montgomery Securities annual investment conference in San Francisco.

Mr. Carson's message was simple: the management team put in place at Los Angeles-based First Interstate following the retirement of Mr. Pinola has pinpointed the organization's problems and is putting into effect solutions that will produce consistent profits. The unstated

COMMUNITY RELATIONS

Bill Would Separate Exams For Lending Compliance

By LINDA CORMAN

WASHINGTON — A bill awaiting action on the Senate floor would create yet another exam for many financial institutions.

The Fair Lending Enforcement Act, which was introduced by Sen. Alan Dixon, D-Ill., would require regulators to conduct separate examinations for consumer compliance, which encompasses community reinvestment and fair lending, and for safety and soundness. Several regulators now do both in one fell swoop.

The measure is modeled after the practices of the Federal Reserve Board, which has conducted separate exams in these areas for the past 15 years. The Federal Deposit Insurance Corp. and the Office of Thrift Supervision are also taking steps to create separate exams.

But the Office of the Comptroller of the Currency and the federal credit union regulator have expressed at least some resistance to the proposal, saying it could increase their examination costs. And industry trade groups say the measure would increase the regulatory burden on financial institutions.

The bill, which passed the Senate Banking Committee in July, would require that all financial regulators create separate units for consumer compliance by Jan. 1, 1993. Under the proposal, the heads of the consumer compliance programs would answer directly to their respective agency heads, not to the examiners in charge of safety and soundness.

Discrimination Alleged

The legislation sprang from hearings conducted over the past year on alleged discrimination in mortgage lending.

"There has been lots of testimony that regulators don't give enough attention to [consumer compliance] exams," said a staff member of the Banking Committee. "It is too complex to do both consumer exams and safety and soundness exams. If a choice [has to be made], short shrift is given to consumer stuff."

The proposed changes are designed to make sure examiners devote full attention to banks' compliance with consumer legislation and to ensure that examiners are fully versed in that subject.

The National Association of Federal Credit Unions has been the most vocal in expressing concerns about the measure.

The cost of having separate examiners is the primary issue, said John H. Zimmerman, legislative representative for the organization. Mr. Zimmerman declined to provide an estimate of what the additional costs would be to the credit union regulator and what costs would be passed on to credit unions.

The Banking Committee staff member, however, said the credit union group had claimed the bill would set it back $3 million. The staff member said the committee estimated the cost would be closer to $300,000.

The banking trade groups have not made the legislation a priority in their legislative battles. But both the American Bankers Association and the Consumer Bankers Association say the measure is another example of the growing regulatory burden on their members.

Conflicting Demands

Craig Ulrich, vice president and general counsel for the consumers association, said a potential problem with separate exams is that banks may "get stuck between conflicting demands . . . between safety and soundness and consumer compliance."

Some cases of conflicts have already arisen when regulators have used separate examiners, Mr. Ulrich said. Some bankers have said they see inherent conflict in being more flexible about qualifications for borrowers in low-income areas and living up to regulators' standards, particularly when making housing and other real estate loans.

In its report on the estimated cost of implementing the proposal, the Congressional Budget Office said the added expense to the National Credit Union Administration – the federal agency that regulates credit unions – would be $200,000 for training and $400,000 for reporting and supervision.

Although the NCUA board has not taken a position on the proposed legislation, the regulator has concerns about the costs, said Robert Loftus, agency director of public and congressional affairs.

"We feel we're doing all that is necessary for consumer compliance," said Mr. Loftus, who added that the agency is seeking some changes in the bill.

Among the banking agencies, the Office of the Comptroller of the Currency has offered the strongest resistance to the proposal even though it has taken steps to alter its organization to meet the bill's requirements, said the Banking Committee staff member.

"No one here is trying to stonewall" the proposal, said a spokesperson for the Comptroller's office. But she said the agency is concerned that the bill would translate into increased costs for the OCC. The Congressional Budget Office found the additional cost for the Comptroller's office would be $200,000 to $500,000. The money would be needed to hire consumer compliance directors for each of six supervisory districts.

No additional costs would be borne by the FDIC, the OTS, or the Fed, the Congressional Budget Office found, because these agencies are already introducing compliance systems similar to those called for in the legislation. □

Top Card Banks Cut Loan Losses

Consolidations Help Big Lenders Find Efficiencies

remain among the most profitable for financial institutions.

"Cards are making a much larger contribution to their banks' income than they have in the past," said Robert K. Hammer, president of R.K. Hammer, an investment bank in Newbury Park, Calif., that specializes in card portfolio sales. "That dependency on revenue from cards will continue to grow."

10.	First Interstate Bancorp	2,095	-13.2	3.15	-10.8

Industry observers attributed some of the down trend in chargeoffs to the maturing of the credit card business. As accounts in a bank's portfolio get older, the likelihood of default decreases, they said.

But more important, the decline in chargeoffs demonstrates that bank investments several years ago in sophisticated credit-reporting and collections systems are now paying off. These systems screen out credit risks and help banks induce payments from delinquent borrowers.

Collections Emphasized

"There has been a tremendous emphasis on collection activity, which started about two to three years ago, when bankruptcies first hit and credit losses got out of hand," said Peter T. Dunn, managing director of Edgar, Dunn, and Conover, a San Francisco management consulting firm. "What we're seeing is the impact of those programs and better-managed portfolios."

That is good news for bankers, who have been worried about a host of gloomy economic statistics, including an uptick in personal bankruptcies. In 1989, 616,753 people filed for bankruptcy, an all-time high and an increase of 12% from 1988.

The *American Banker* survey found other bits of good news for credit card bankers. While many worry that little room is left for growth in the business, the study found that loans outstanding continued to increase at a healthy clip.

> **"What we're seeing is the impact of those programs and better-managed portfolios."**
>
> **Peter T. Dunn**
> *Edgar, Dunn, and Conover*

In 1989, the top 100 credit card banks reported receivables totaling $106 billion, a 13.7% jump from the previous year. Credit card loans outstanding at all commercial banks totaled $130.8 billion in 1989, an 11.6% increase.

The industry's card holdings grew faster than its overall consumer loan portfolio, which rose by 10.6% last year. But card growth fell well short of banks' 27% surge in home equity loans. The latter have become increasingly popular because, unlike interest payments on credit cards, interest on home equity credit remains fully tax-deductible under the Tax Reform Act of 1986.

The credit card business is continuing to consolidate, the numbers showed, with roughly three-quarters of loans outstanding held by the 100 largest players. Benefiting from economies of scale, the biggest card banks appeared the most adept at controlling losses. Seven of the top

Age Boosts Card Portfolios' Quality

Continued from *page* **10**

10 credit card banks reported chargeoff ratios below the top 100's average.

Chargeoffs Decline

Among the 10 largest holding companies ranked by subsidiaries' combined credit card loans outstanding, seven showed declines in chargeoffs in 1989.

"Operating leaner and meaner is becoming a way of life," said Mr. Hammer, the California investment banker.

At the banking subsidiary of Chase Manhattan Corp., the nation's second-largest card issuer, the chargeoff ratio declined to 2.58%, from 3.01% a year earlier. At the same time, loans outstanding rose a whopping 37.6%, mostly due to five portfolio acquisitions.

Chase's statistics demonstrated how the surge in portfolio sales is also helping keep chargeoffs down. Banks in the market for new receivables often look for seasoned accounts, which are less likely to default than newly solicited customers.

Buying 'Old Portfolios'

"A few years ago, there was an explosion of new account solicitations," said Mr. Dunn, the management consultant. "What we're seeing now is a moving around of old portfolios."

Earnings surged 30.45% at 20 top banks that specialize in credit card lending.

In 1989, about $6.6 billion worth of credit card receivables changed hands.

In fact, evidence indicated that a concentration in credit card lending yields superior profits to the biggest issuers. At 20 top banks that specialize in credit card lending, earnings surged 30.45%.

Other key findings of the survey follow:

- Citicorp remains the largest company in the business. At the end of 1989, units of the holding company claimed $22.7 billion in card loans outstanding. Portfolio growth was probably greater than the 4.7% increase reported, since the figures reflect Citicorp's asset securitization transactions.
- Sears, Roebuck and Co.'s Discover card continued to grow more profitable. Receivables at Greenwood Trust Co., the Newcastle, Del., bank that issues the card, grew 16.7% in 1989, to $6.89 billion. Net income at the bank hit $97.1 million, up from $1.33 million in 1988.
- Another nonbank competitor – American Express Co. – also saw significant growth. Its Centurion unit, which holds receivables for the Optima card, claimed $5.1 billion in loans outstanding in 1989, up 35.9% from a year earlier. Net income soared 78.5%, to $65 million.
- Among the top 10 banks, the biggest gain was posted by FCC National Bank, Wilmington, Del. Its outstanding credit cards and related loans surged by more than 60%. The next biggest gains were at Citibank (Nevada), Los Angeles – 39.95% – and Chase Manhattan Bank (USA), Wilmington – 37.63%.

Data sources: Data are from the Report of Condition and the Report of Income submitted to the Federal Deposit Insurance Corp. American Banker used **BankSource,** a data base provided by **W.C. Ferguson & Co.,** Irving, Tex, and **Lotus One Source**, a data base provided by **Sheshunoff Information Services Inc.,** Austin Texas, to extract these data. The 1988 data are not adjusted for mergers in 1989. **Credit Cards and Related Loans Outstanding** are from Schedule RC-C, item 6a, of the Report of Condition and include, on a gross basis, all extensions of credit to individuals for household, family, and other personal expenditures arising from bank credit cards or special prearranged overdraft plans. **Total loans** are from RC-Balance Sheet, item 4.a.—"Loans and leases, net of unearned income". **Net Income** is income after taxes but before extraordinary items and other adjustments (Report of Income, item 10). **Net Chargeoffs** are gross chargeoffs on credit cards and related plans less recoveries on credit cards and related plans. The data are from Schedule RI-B of the Report of Income, item 5(a) Column A less item 5(a) Column B. **(‡)**— Except for net income, the 1988 totals are for the top 100 banks in 1988. The 1988 net income is for the top 100 credit card banks in 1989. **(†)**— Data are for FDIC-insured commercial banks and are from the Federal Reserve Board and the Federal Deposit Insurance Corp.

Credit Union Insurance: Model Earns a 2d Look

By BILL ATKINSON

For months, credit union representatives have been telling anyone who will listen that their deposit insurance system is a sound alternative to the one used by the banking industry.

Bankers scoffed at the notion. But the message appears to have gotten through to regulators and congressmen, who are now considering the merits of reshaping the bank fund on the credit union model.

ANALYSIS: *Follow-up on the news*

Last week, Frank Annunzio, D-Ill., chairman of the House Banking subcommittee on financial institutions, introduced a bill that would require banks to place 1% of their deposits with the Federal Deposit Insurance Corp. In effect, the bank insurance fund would take on the credit union insurance structure.

Several days earlier, FDIC Chairman L. William Seidman dispatched a letter to House Banking Committee Chairman Henry B. Gonzalez, D-Tex., saying the credit union's approach to insurance would merit consideration.

Examining Pros and Cons

"The pros and cons are being looked at," acknowledged John F. Bovenzi, deputy to Mr. Seidman. "It warrants consideration rather than a proposal by the FDIC. We are making a suggestion to Congress that it is something they could look into. We have made no determination that it would be a system that we would want to use in that form."

The FDIC already has employees in its research division reviewing such a plan, Mr. Bovenzi said.

Bankers have publicly criticized the credit union insurance structure and dismissed it as a model for themselves. They say the system is risky because credit unions place 1% of their insured deposits with the National Credit Union Share Insurance Fund and do not write that money off their books.

Although the contribution bolsters the insurance fund, each credit union is open to losses if the insurance fund is forced to spend the 1% of deposits it holds, the bankers charge.

Alternatives Must be Weighed

But the banking industry may be forced to take a close look at alternatives to its current deposit insurance system. Losses have continued to erode the FDIC fund to a record low of 70 cents

Bankruptcy Seen As Causing Half Of Card Losses

By YVETTE D. KANTROW

NEW YORK – Nearly half of all credit card losses are now attributable to personal bankruptcies, up from a third only one year ago, according to an industry report.

The finding – nestled within the American Bankers Association's annual credit card survey – demonstrates how the recent uptick in personal bankruptcies could harm the credit card industry. The trade group warned that if allowed to continue, the bankruptcy trend may result in higher credit card prices and fees.

Role for Bankers

"That it increased so much really surprised me," said George Fesus, executive vice president at State Street Bank and Trust Co., Boston, and incoming chairman of the American Bankers Association's bank

UAL Buyout Group Seeks Smaller Financing Package

By STEVEN LIPIN

The union-led buyout group bidding for UAL Corp. is now seeking only $2 billion in bank financing for a new, lower bid to buy the airline, banking sources confirmed. That compares with the $2.5 billion it sought from banks just a month ago.

The new bid is expected to be valued at $175 to $180 a share with at least $140 of that in cash, said a banker with knowledge of the deal. The current bid is $201 a share in cash and securities.

Banks to Hear Pitch

The employee-led group was tentatively scheduled to present the new proposal to four lead banks and 25 potential lenders Wednesday in New York.

Those leading the financing – the banking units of Bankers Trust New York Corp., Manufacturers Hanover Corp., First Chicago Corp., and Security Pacific Corp. – will not underwrite the proposed new offer, a banking source said.

Because of turbulence in the energy markets, the sluggishness of the airline industry, and the difficult environment for funding highly leveraged deals, the four would-be agents are not prepared to step up with $500 million commitments each, a banking source said.

Rather, the group is seeking to arrange a "club" financing with a large number of banks, similar to the deal for RJR Nabisco Inc. in which 28 banks were involved in the primary syndication, according to bankers working on the deal. The obvious difference

Comptroller Joins with Fed, FDIC On a 3% Minimum Capital Ratio

By BILL ATKINSON

WASHINGTON — After months of debate among regulators over a minimum bank capital requirement, the Office of the Comptroller of the Currency said Monday that it will fall in line with a Federal Reserve Board plan to require a 3% leverage ratio at the healthiest banks and higher levels at others.

The decision came a week after an intense Senate Banking Committee hearing in which Comptroller of the Currency Robert L. Clarke was portrayed as an "odd man out."

Seidman Criticism

L. William Seidman, chairman of the Federal Deposit Insurance Corp., said then that his agency would endorse the Fed policy, and he criticized Mr. Clarke's adherence to a slightly different standard. Mr. Clarke and the other regulators were told by committee Chairman Donald W. Riegle Jr., D-Mich., to agree.

The proposal calls for banks to maintain a minimum ratio based on their Camel ratings, regulatory assessments of capital, asset quality, management, equity, and liquidity. Banks that get a "1" rating, superior, would have to maintain capital equal to at least 3% of assets, regardless of whether they also meet higher, risk-based capital requirements.

Banks lower on the Camel scale would have to attain a higher capital level.

Mr. Seidman at the FDIC has

Tom Bloom

Comptroller Joins Fed, FDIC in 3% Minimum Capital Ratio

Continued from *page* **1**

said he will back the 3% minimum despite his earlier support for a 4.5% standard. The agency has not yet adopted the rule, but it is expected to be discussed today at an FDIC board meeting.

OTS Backs 3% Ratio

Also Monday, the Office of Thrift Supervision said it supports the 3% leverage ratio and will amend its capital regulations accordingly.

The Comptroller's office initially proposed a 3% minimum for the healthiest banks but did not define healthy, said Ellen Stockdale, a spokeswoman for the agency. Critics charged that the proposal would let too many banks qualify for the minimum ratio. Now, the 3% minimum will apply to about 640 national banks with a 1 Camel rating.

"We never thought we were very far apart," Ms. Stockdale said of the Fed and the Comptroller. "For us to go from our original wording to 3% [for top-rated banks] was just a clarification."

In a written statement, Mr. Clarke acknowledged that concern existed over possible confusion between the Comptroller's and Fed's guidelines.

Clarke Is 'Delighted'

"For that reason, we have changed the language of the OCC's final rule to make it identical with that of the Federal Reserve," he said. "We are delighted that the FDIC also plans to adopt the same guideline."

The Comptroller plans to publish its final rule in the *Federal Register* this week.

Some industry observers still grumble over the guidelines, saying they will confuse bankers who will initially not know their capital requirement if they do not qualify as a 1-rated institution.

"I just think the end result is going to be uncertainty for the industry," said James Butera, a Washington banking lawyer and lobbyist. "It is a very different system than we have now. Everybody is in the same boat. Right now, everybody that is FDIC-insured is subject to a leverage ratio of 6%. All you need is a calculator to figure it out."

James D. McLaughlin, director of agency relations, trust, and securities at the American Bankers Association, acknowledged the advantages of uniformity, but he objected to tying the minimum leverage ratio to a bank's Camel rating. The rating is subjective and lacks precision, he said. ☐

Card Losses from Bankruptcy on the Rise

Continued from *page* **1**

card division. Mr. Fesus urged bankers to take a more active role in educating consumers on the use of credit and in fighting fraudulent bankruptcy filings.

According to a published report, 616,753 people filed for personal bankruptcy last year, an all-time high and a 12% increase over the previous year. Some bankers fear that bankruptcy will further escalate this year as an uncertain economy spurs people to abandon their debt.

For its third annual bank card report, the ABA mailed questionnaires to 1,620 banks this summer to gain information on their bank card businesses. Completed surveys were returned by 446 banks.

The trade group announced the results at its annual bank card conference in New York.

Overall, the banking industry reported $3.7 billion in net bank card and related revolving credit losses in 1989, up from $3.3 billion in 1988, the ABA said. At the same time, the use of credit cards also grew.

Deadbeats Are Few

"All bankruptcy and loss statistics have to be kept in context of the total industry," Mr. Fesus said. "We're still only talking about 2% to 3% of our customers.

"The vast majority of bank cardholders are in good control of their expenditures," he said.

In 1989, consumers used credit cards 2.9 billion times to purchase more than $189.8 billion worth of goods and services. That's up from the 2.7 billion card transactions conducted in 1988, representing $168.4 billion in retail sales.

According to the ABA study, 2.36% of all credit card accounts were 30 or more days past due at June 30, up from 2.20% a year earlier. Based on dollar outstandings, delinquencies totaled 3.46% at the end this year's second quarter.

Mr. Fesus said that bankruptcy's increasing contribution to bank card losses could be an aberration and may not signal an long-term trend. His institution, based in the troubled New England region, has not seen an as much of an uptick in bankruptcy-related credit card losses as those uncovered by the ABA study, he said.

Visa on Monday revealed an automated tracking system that allows banks to use personal computers to get weekly updates on bankruptcy filings. According to Ken Crone, director of Visa's bankruptcy reduction program, the system is unusual because it allows banks to get information on bankruptcies the same week they are filed. It typically takes credit bureaus one to three months to report on new filings, he said. ☐

ment deficit soared.

Mr. Schulmann's comments came on the eve of the annual meetings of the International Monetary Fund and the World Bank. It has become a tradition for the IIF, founded in 1984 to advise bankers on the economic outlook for Third World debtor countries, to make statements in anticipation of the annual meetings, and to scold Third World debtors for debt arrears.

Strategic Problems

Although progress had been made with $60 billion of bank debt owed by highly indebted, middle-income countries representing about one-quarter of the outstanding medium- and long-term bank debt reduced since 1985, Mr. Schulmann said problems persist in current official debt strategy.

Mr. Schulmann criticized advocates of reducing or forgiving debt and finance ministers who try to "drive down secondary market prices through 'open-mouth' policies."

Mr. Schulmann said that as long as debtor countries continue to accumulate arrears, retrenchment of commercial creditors will continue.

The Confidence Factor

'The rapid build-up of arrears destroys confidence among potential investors, undermines discipline in the international system, and indicates a strong element of moral hazard in the official strategy," he said.

Mr. Schulmann pressed the international agencies to condition future credit extension on countries resuming payments on their arrears.

"The IMF and the World Bank need to make clear that they will not provide finance to countries until they have stopped adding to arrears and agreed with their creditors to a program to eliminate the arrears within a reasonable time frame," Mr. Schulmann said.

Loan Terms Criticized

He also said the final terms of an imminent agreement for a standby loan of $2 billion between the IMF and Brazil would be key to whether commercial banks resumed lending in the Third World.

Tentative agreement was reached last week, and the loan was not attached to resumption of interest payments by Brazil. Mr. Schulmann's remarks were understood to be a warning that changes should be made before the agreement is final.

Mr. Schulmann further noted that both Argentina and Brazil wil probably have substantial trade surpluses this year, providing them with the foreign exchange reserves they need to make debt repayments. ☐

Banks Need to Rethink the Mortgage Game

By SANFORD ROSE

The mortgage business is good; the mortgage business is bad. One hears both refrains echoed in the pages of this newspaper. Who is right? The answer is that both may be right because each protagonist is probably talking about a different part of what is generically called the mortgage business.

That business can usually be divided into three distinct parts: origination, servicing, and funding. Mortgage servicing can be hugely profitable, but generally only for scale players. Economies of scale in this activity are enormous. The direct servicing cost per loan declines from about $120 for those servicing less than $500 million in mortgages to only about $75 for those servicing more than $5 billion in outstandings.

Comment

Mortgage origination can also be profitable (although again probably only for scale players with a good handle on costs). The reason is that the institutional market has a tremendous, well-nigh insatiable, appetite for current-coupon originations, especially fixed-rate ones, and in consequence tends to bid up their price (drive down their yield). Hence, efficient gatherers of mortgages who originate at par can generally count on selling these originations at more than par.

An Inefficient Market

This phenomenon betokens market inefficiency. Current-coupon mortgages usually have the largest amount of prepayment risk. If rates fall by 150 basis points or more, a substantial number of mortgagors will elect to refinance at the lower rates, killing the yield on the portfolio.

These mortgages should therefore be priced lower (their yields should be higher) to compensate investors for the risk of early prepayment. But because investment demand perversely remains so buoyant, this does not happen. The market continues to overprice, affording mortgage gatherers the opportunity to sell their current production at attractive prices.

A Negative Spread

However, the very reason that makes mortgage origination a profitable activity helps to make mortgage funding – the third segment of the business – an unprofitable one. The spread on current-coupon mortgages, relative to Treasuries, has been fall-

Fannie, Freddie to Undergo Exams Like Those for Banks

By DEBRA COPE

WASHINGTON — Stung by criticism that it has failed to adequately regulate the secondary mortgage market, the Department of Housing and Urban Development is poised to initiate banklike examinations of the Federal National Mortgage Association and Federal Home Loan Mortgage Corp.

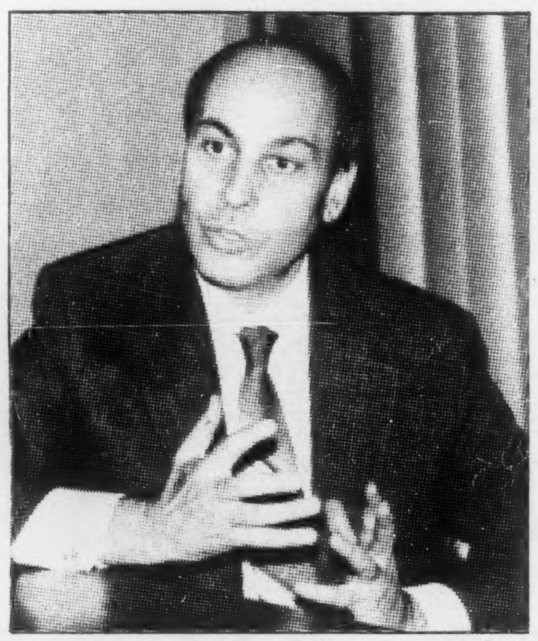
"We want to do examinations. We know that we have to do them. We're just trying to figure out how to do them," HUD Under Secretary Alfred A. DelliBovi said in an interview Friday.

Special Expertise Needed

Although HUD monitors public housing authorities, Mr. DelliBovi said the two government-sponsored mortgage institutions need examiners with a special expertise that his agency cannot muster by itself.

"If everything in banking was just hunky-dory, we would probably be able to suggest that [FDIC Chairman L. William] Seidman or [Federal Reserve Board Chairman] Alan Greenspan lend us a team of the best and the brightest that they have to do this for us," Mr. DelliBovi said. "But they are very busy at the Fed and at FDIC."

HUD traditionally has based its monitoring of Fannie Mae and Freddie Mac, as the two mortgage agencies are known, on reports and information that the agencies themselves generated, Mr. DelliBovi noted.



Peggy Turbett

Alfred A. DelliBovi
HUD under secretary

Now, Congress and the public are asking whether this type of review is sufficient.

Answering the Doubts

"It seems to me the public is entitled to ask the question of the regulator, 'How do you know?'," he said. "It is not possible for me to satisfactorily answer that question by saying, 'I know it because they told me.'"

The plan is the product of HUD's financial institutions

Morgan Wins Hanover's Phone Deal In Argentina

By JAMES R. KRAUS

In what could prove to be a major coup, a syndicate led by J.P. Morgan & Co. was awarded a contract to acquire a majority stake in one of Argentina's two state-owned telephone companies.

The contract had originally been awarded to a syndicate led by Manufacturers Hanover Corp., but Hanover said it could not arrange the necessary financing.

If Morgan succeeds in arranging the financing, the deal could give Morgan an edge over other U.S. banks competing for millions of dollars in fees for arranging debt-for-equity swaps, in which banks convert their loans to foreign countries into equity in state-owned companies that are privatized. A spokesman said Morgan was confident it could arrange the financing.

Massive Privatization Plans

Argentina, Mexico, Brazil, and other Latin American countries are planning to privatize billions of dollars worth of assets in an effort to modernize obso-

Stock Woes Slow Consolidation Of Bank Industry

By GORDON MATTHEWS

NEW YORK — The enormous decline in the value of bank stocks over the past year, particularly in the third quarter, has helped bring the industry consolidation movement – at least the portion without government assistance – to a virtual standstill.

The aggregate value of unassisted mergers and acquisitions involving banks and thrifts announced during the third period declined to a meager $1.1 billion. That is 80% below the $6.2 billion in the same quarter in 1989, just before the momentous slide in bank stock prices began.

Key Index Down 40%

The *American Banker* index of the nation's 225 largest publicly traded banks peaked a year ago today and has since declined 40%. Many banks, including some viewed as potential acquirers of other banks, have suffered even larger losses in market capitalization.

With the standard avenue of

COMMENT / *By Paul S. Nadler*

Healthy States Footing Bill For Recovery of Profligates

As Robert M. Kossick, chief executive officer of National Community Bank, Rutherford, N.J., moves around his state speaking to business groups, he summarizes banking's current crisis and the harm to bank earnings simply:

"If a bank has lent $1 million on a property with a $1.3 million appraisal and now the property is appraised at $750,000, the bank must take a $250,000 hit to earnings even if the loan is performing."

This tells it all.

Property values soared in the 1980s as institutional and individual investors with money to burn poured more and more into real estate. And now, as values recede to more realistic levels, we are paying the price for pushing up values too fast.

The Oil Patch Example

It is like the Oil Patch. Texas did all right with $2-a-barrel oil. It did beautifully with $34 oil. But the state fell to its knees with $18 oil because it had operated as if the upward price trend would go on forever.

The irony is that the emphasis on providing money for housing in good years and bad remains alive, despite all the damage it has done to our economy and our banks.

Why, one can ask, do we still see a tax preference for interest paid on home mortgages, second mortgages, and second homes when every other sort of interest charge has been denied much or all of its former tax deductibility?

One listens to the radio ads for Citibank in the New York area and hears the pitch for its home equity loans. This stresses that, as long as the loan is collateralized by your home, you can get a loan for your daughter's wedding, for a zooming car, or for anything else you might want and – here comes the best part – "it may be tax deductible."

Shouldn't people whose loans are not tied to real estate be angered? And shouldn't this emphasis on promoting the tax advantage of using your home as the basis for loans that have nothing to do with home finance force Congress to change this inequity?

It should.

But equally bad, as we look at the legacies the 1980s housing boom has left us, is the impact on regional growth.

We well recognize that, in America today, economic weakness or strength are not uniform throughout the nation but vary by region. How ironic that the strongest area in our economy now is the Midwest – the region until recently derided as "the Rust Belt."

"Texas, California, and other states . . . are now the beneficiaries of their excesses, while the rest of the nation pays."

And when we talk about recession, we must remember that it is largely the areas that depended on home finance and the financial markets for their prosperity that are in trouble today. The areas where we produce export goods or where services such as education, medicine, and recreation are key industries have not suffered.

However, Texas, California, and the other states that relaxed laws to let thrifts finance unlimited growth are now becoming the beneficiaries of their excesses, while the rest of the nation pays.

We all recognize that overbuilding in the Southwest will be paid for in large degree by taxpayers everywhere as the government makes the fund transfers needed to protect depositors in federally insured institutions whose assets have turned sour.

Free Ride for Prodigals

Another legacy, though, is that Texas, California, and other states have unoccupied homes and commercial facilities whose prices are falling to clear the market glut. As prices fall, employers will be attracted to move to the very places where the excesses took place.

When we see companies move from the Northeast, the rationale frequently offered is: "Our employees can have a better lifestyle at lower cost because of the housing available in Texas."

In sum, these companies are saying that the taxpayers of America will subsidize their lower-cost operations in the states that neglected sound banking principles and let their thrifts do anything they wanted with federally insured deposits.

Wiser Heads Pay the Tab

The states that maintained sound financial practices will be the losers, and those that did not will get the lion's share of economic growth in the years ahead – largely at taxpayers' expense.

It all bolsters the stark reality of the price we eventually pay when we let one industry shove its way to the front of the line in the allocation of credit at the expense of free market principles that are based solely on risk, income, and liquidity preference. ☐

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at the Rutgers University Graduate School of Management.

COMMENT / *By Sanford Rose*

Rethinking Mortgages

Continued from *page* **1**

ing, while the cost of funding these mortgages, again relative to Treasuries, has not been falling, or at least not by as much as the asset yield. As a result, the best evidence suggests that the marginal cost of funding is now greater than the yield on current-coupon, fixed-rate (and even variable-rate) mortgages, after, that is, this yield has been adjusted for the cost of the prepayment option and the cost of match-funding the asset.

To be sure, negative funding spreads do not prevail universally. In parts of the country where the demand for mortgage money is unusually heavy, mortgage yields may be high enough to provide good investment opportunities for financial intermediaries, especially for those which can raise money at the margin at a cost not appreciably greater than their average cost. But such instances are comparatively rare. For most banks and thrifts, mortgage funding is a losing proposition.

Adjusting the Yield

Indeed, even in so-called advantaged areas, it is questionable whether mortgages can be safely funded to term at a positive spread. For example, while some California thrifts claim to be earning a funding profit, on closer examination it turns out that this is because a number are either not match-funding or have not deflated yields adequately for the cost of the prepayment option.

Were the appropriate adjustments to be made, the rate of return on the funding business might be positive only because the institution was financing a portion of its mortgages with interest-free equity monies. But since the spread on the nonequity financing is probably negative, the overall return on equity should still be minuscule, perhaps as low as 1% or 2%.

The upshot is that banks and thrifts which lump together the returns of all three segments of the mortgage business tend to deceive themselves. In the aggregate, their mortgage activities may generate a high enough return on equity – perhaps 14% or 15% – to increase shareholder value. This fact may lead managements to conclude that the mortgage business does not need fixing. But this would be a grave error, especially since most of the equity earmarked to the mortgage business is invested in that part of the activity which tends to destroy shareholder value – the funding segment.

Most of a bank's mortgage equity is invested in a losing business.

Quite logically, managements should look at mortgage returns in an unbundled fashion. Such an analysis would reveal the need to exit the funding business, which in most cases can be done without damaging the returns from either servicing or mortgage origination. The equity freed up can then be reinvested in other businesses that are more attractive.

In truth, however, many institutions are loath to exit the mortgage funding business because they simply cannot find alternative profitable uses for deposits and equity funds. Obviously the solution is bankwide retrenchment. Managements should use core deposits to retire higher-cost purchased funds. And they should dispose of equity either by raising dividend payouts or by stock repurchase, thereby helping to raise share prices.

An Unattractive Future

It should also be noted, at least parenthetically, that while certain parts of the mortgage business seem adequately profitable in the short-run, the longer-term outlook is something less than optimistic. This is because the country is for the most part overhoused. We have increased the inventory of one- to four-family homes faster than the inventory of people eligible to occupy these homes. Population growth has slowed, and population mobility is decreasing.

As a result, the profits from both mortgage origination and servicing should come under eventual pressure. For example, the profitability of servicing tends to decline as mortgages amortize, simply because the revenue, which is a function of the size of the outstanding balance, inexorably falls while costs continue to creep up.

So, without a sufficient supply of new mortgages coming on stream, the economics of the business worsen progressively. Since population trends argue for a more restricted supply of new mortgages in the current decade, what is currently a reasonably healthy business may in the future become rather unhealthy for all but the most mammoth and cost-efficient service providers. ☐

Data Sources: American Banker questionnaire. The 1989 data are as reported last year. For companies not reporting the number of banks and branch data, American Banker extracted these data as of March 31, from **Lotus One Source**, a data base provided by **Sheshunoff Information Services Inc.,** Austin Texas. **Primary capital** is equity capital; the allowance for loan and lease losses; mandatory convertible debt; and the minority interest in equity accounts of consolidated subsidiaries. **Total capital** is primary capital plus secondary capital. **Secondary capital** is limited life preferred stock; subordinated notes and debentures not included in primary capital; and long-term debt of the parent company and its nonbank subsidiaries with an original maturity of seven years or more. **Primary capital ratio** is primary capital on June 30 divided by total assets on June 30, expressed as a percentage. **Note:** American Banker ratio is not calculated in the same manner as the Federal Reserve Board. American Banker does not add the allowance for possible loan and lease losses to total assets, as the Fed does. For that reason, American Banker's ratio is from 5-to-15 basis points higher than the Fed ratio. **Net income:** income after taxes, loan loss provisions and minority interest, but before preferred dividends and extraordinary items. Income from discontinued operations is excluded. **( )**— A loss. **(§)**— Revised since publication on July 31. **(1)**— Excludes the extraordinary credit resulting from previously unrecognized tax benefits. Including this credit, net income was $545 million. **(2)**— Excludes the gain on sale of consumer finance company. Including this gain, net income was $207 million. **(3)**— For the top 100 on June 30, 1988.

Acquisitions Fuel $54 Billion Rise in Assets at Biggest Banks

By L. MICHAEL CACACE

NEW YORK — Banks eager to shed assets are being distracted by the availability of low-cost deposits, an *American Banker* survey indicates.

In the first half of the year, the total assets of the top 100 banking companies increased by 2.4%, or $54 billion, fueled largely by acquisitions.

Twenty-eight of the companies reduced their assets by a net total of $31.2 billion. However, acquisitions increased assets among the 100 by more than $57 billion.

22 Thrifts, 18 Banks Acquired

Of the 40 acquired institutions, 22 were thrifts with combined deposits of more than $24 billion, and 18 were other banks with combined assets of more than $33 billion.

"The name of the game is asset shedding to meet risk-based capital requirements," said John Lyons, president of Lyons, Zomback, and Ostrowsky. "However, some banks have had an overwhelming opportunity to acquire liabilities. Unfortunately, when you acquire these liabilities, you acquire assets, at least in the short run."

> **"When you acquire these liabilities, you acquire assets, at least in the short run."**
>
> **John Lyons**
> *Lyons, Zomback, and Ostrowsky*

The *American Banker's* annual midyear review of the nation's top 100 banking companies found that assets on June 30 stood at $2.34 trillion.

Government-Assisted Deals

According to data from SNL Securities, Charlottesville, Va., the top 100 banks continued to acquire institutions in the third quarter – mostly through government-assisted deals.

In the quarter, 17 of the top 100 acquired $17.5 billion in deposits from 20 thrifts and one bank in government-assisted deals.

In private acquisition deals excluding the C&S/Sovran merger, 10 of the top 100 companies acquired 12 institutions with $3 billion in assets.

Among the top 100 banking companies at midyear, the three with the largest percentage gain in assets attributable to mergers were: LaSalle National Corp., Chicago; Society Corp., Cleveland, and MNC Financial Inc., Baltimore.

LaSalle's assets rose 100% after acquiring the $3.3 billion-asset Exchange Bancorp, Chicago, on Jan. 30.

Society Corp. had assets jump 43% after acquiring the $5.3 billion-asset Trustcorp Inc., Toledo, on Jan. 2.

And MNC's assets were up 36% after its acquisition of the $5.2 billion-asset Equitable Bancorp., Baltimore, on Jan. 18.

The five banking companies with the largest reduction in assets were: Bank of New England Corp., Boston, down 22.5%; Marine Midland Banks Inc., Buffalo, down 9.4%; First Interstate Bancorp, Los Angeles, and First Bank System Inc., Minneapolis, both down down 6.7%, and Bank of Boston Corp. down 4.8%.

Among other findings of the survey:

- Total assets of the top 100 bank holding companies were $2.34 trillion on June 30, up 5.8% from $2.21 trillion a year earlier.
- These banks also had $1.66 trillion in deposits, up 9.4% from $1.51 trillion on June 30, 1989. They also controlled 1,097 domestic banks with 26,674 domestic branches at midyear.
- The nation's 100 largest banking companies earned $6.9 billion in the first half, down 28% from $9.6 billion earned by the top 100 companies in the 1989 period.
- The top five earners in banking in the first half of 1990 were: Citicorp, with net income of $479 million before extraordinary items; BankAmerica, with $430 million; Wells Fargo, with $392.2 million; Security Pacific Corp., with $383.6, and J.P. Morgan & Co., with $375.6 million.
- Among the 100 largest banks, 16 reported losses for the first half of the year. Banks in the Northeast accounted for half the total. The largest losses were: $129 million posted by First Fidelity Bancorp., Lawrenceville, N.J.; $90 million recorded by National Westminster Bancorp Inc., New York; $85.1 million by United Banks of Colorado Inc., Denver; $83.9 million by European American Bancorp, New York, and $79.9 million by Bank of New England Corp., Boston. ☐

(a)— Its bank subsidiary— National Bank of Washington— failed in August.

Only a Third of Thrift Rescues Completed, Survey Finds

Continued from *page* **1**

have be done in a number of other states.

The Resolution Trust Corp. and the former Federal Home Loan Bank Board at midyear had disposed of $172 billion of the minimum $500 billion in thrift assets the government must eventually resolve, an analysis of regulatory reports reveals.

What is more, as of mid-August there were at least $275 billion of U.S. thrift assets controlled by failed or failing thrifts outside of Texas – most concentrated in real estate markets that are visibly weakening.

High Costs in Texas

The Texas rescues completed by midyear were highly expensive. Though rescues in the Lone Star state accounted for roughly a third of assets resolved between 1988 and midyear 1990, they accounted for almost 60% of the resulting costs, excluding financing.

By contrast, fairly stable markets elsewhere have helped the RTC – so far. In California, for example, assets resolved by the RTC on the average were only 13% less valuable than the insured deposits with which they were funded. That compares with a 66% shortfall at Texas thrifts rescued by the RTC as of midyear.

But the danger now is that the national economy and real estate market will fall apart before the government's cleanup efforts kick into high gear.

Texas-sized downturns could devalue thrift assets across the country, provoking Texas-sized cleanup expenses. More thrifts would go broke; broke thrifts would sink deeper underwater.

"If the nation as a whole enters a recession, property values could decline significantly, and thrift cleanup costs could rise very dramatically," said Henry Peltz, a vice president at Keefe, Bruyette & Woods, New York.

OTS Summary of Assets

In response to a request by this newspaper, the Office of Thrift Supervision provided a state-by-state summary of assets held by thrifts that the agency believes will fail.

The OTS totals, when combined with assets of thrifts under RTC control as of mid-August, reveal a wide regional dispersion of thrifts requiring resolution – and enormous concentrations of assets. (The figures do not reflect a number of resolutions announced since mid-August.)

On the East Coast, there were $97 billion of thrift assets to be resolved – $48 billion in the South Atlantic states, $43 billion in the Middle Atlantic states, and $6 billion in the New England states.

In the Pacific states of California, Oregon, and Washington, the RTC as of mid-August was facing a $74 billion cleanup operation.

The East North Central and West North Central states contained a $55 billion resolution case load. And in the battered West South Central states, including Texas, Oklahoma, and Louisiana, the RTC still had a $52 billion backlog of thrifts awaiting rescue – some for the second time.

Including Texas, the total population of thrift rescue candidates as of mid-August held $310 billion of assets.

State-by-State Look at the Thrift Cleanup

Growing Caseload

The numbers are a snapshot of a caseload that seems to do nothing but grow. "Every time you look, the numbers get bigger," said Frank Anderson, a senior analyst with Stephens Inc., Little Rock, Ark.

What made the Texas thrift rescues so expensive, experts say, was the speculative nature of the institutions' assets, the severity of the region's economic collapse, and the many years of delay in closing the institutions.

Now that formula is at work in other markets. And the results already are showing: During the first quarter of 1990 alone, thrifts under conservatorship in the RTC's Eastern region reported a 28% increase in delinquent loans; there was a 41.3% jump in delinquencies in the RTC's Western region.

The dead wood will continue to pile up over the next few years, experts say, as deepening regional real estate recessions shake loan portfolios in the East and the West regions.

"The delinquencies come first, then you get the foreclosures," said James Barth, the former OTS chief economist who is a professor at Auburn University.

The treacherous aspect of loan defaults is the rapidity with which attendant losses can mount, Texas lenders say.

Peter Bartholow, chairman and chief executive of the bankrupt MCorp, at one time the largest bank holding company in Texas, said an institution easily can incur a 20% loss on a loan in the first year of its delinquency.

He ticked off funding costs, fees for accountants and lawyers, and management expenses as the principal factors in the loss.

Further upward pressure on cleanup costs could emerge if Congress continues to balk in giving the RTC the funds it needs to keep the pace of resolutions moving swiftly. One reason the Texas cleanup cost so much was that multitudes of thrifts were kept open years after their insolvencies because regulators lacked funds to sell or close them – substantially deepening their losses.

Voicing concerns about market deterioration, RTC chairman L. William Seidman in August put a minimum $100 billion price tag on the RTC cleanup – double the $50 billion estimate the Bush Administration relied upon in crafting the thrift reform law.

And that figure could be conservative: "We simply do not have the data to estimate accurately the potential cost of shutting down in excess of 1,000 thrifts if the economy and real estate markets around the country enter into a prolonged slump," said Mr. Seidman in testimony before the House Ways and Means Committee.

In companion testimony, the General Accounting Office took a swing at the potential cost exclusive of financing charges: $201 billion.

900 Thrifts Ailing

The huge gap between Mr. Seidman's minimum and the GAO's maximum largely springs from the uncertain fate of the roughly 900 thrifts that, while not failing, nevertheless are not in good health. Rescue work made necessary by failures among these institutions would be in addition to the work identified in the survey.

Timothy Ryan, director of the OTS, last week offered no guarantees that all of these institution would survive.

"Any further deterioration in . . . real estate markets, or volatility in the financial markets, will certainly impair the prospects for the survival of troubled (thrifts)," the regulator told a Dallas audience. ☐

Tougher Rules Urged for Banks In Underwriting

WASHINGTON — Reacting to the recent Federal Reserve Board approval to J.P. Morgan to underwrite equities, Rep. John D. Dingell, D-Mich., introduced legislation Thursday that he said would protect taxpayers and investors in the wake of recent regulatory decisions expanding bank securities powers.

The bill by Mr. Dingell, chairman of the powerful House Energy and Commerce Committee, and co-sponsored by Rep. Edward J. Markey, D-Mass., and Rep. C. Thomas McMillen, D-Md., would require banks to place securities powers in a separate affiliate registered with the Securities and Exchange Commission. It would also repeal exemptions banks now have from SEC registration and reporting requirements.

The bill is a reaction to what the three termed the Federal Reserve Board's "misconceived grant of power to J.P. Morgan to underwrite equity securities." The Fed decision, the three said in a written statement, "underscores the degree to which Congress has lost control of the reins of financial services policy." ☐

UAL Financing Fell Victim to Oil Price Risks

By WILLIAM GOODWIN

After sitting on the fence for weeks, bankers finally balked at financing the union-led buyout effort of UAL Corp. because they simply couldn't gauge the risks involved in making the loans.

Although the buyout group tried to persuade lenders that the deal would work with oil prices at $40 a barrel, the continued tensions in the Middle East made the future direction of oil prices too much of a wild card.

"We're only a bullet away from $50 oil," said an official in the U.S. office of a European bank.

"I couldn't get my arms around the risk," he added, explaining why his bank decided not to lend to the buyout group, despite the lure of rich pricing on the loans.

ANALYSIS: *Follow-up on the news*

In the end, the four lead banks backing the union effort – the banking units of Manufacturers Hanover Corp., Bankers Trust New York Corp., Security PacificCorp., and First Chicago Corp. – were able to attract only two additional banks to the cause.

A Statement Tuesday

After falling just short of the $2 billion mark, the lead banks threw in the towel late last Friday night.

With the banks out of the picture, on Tuesday the union-led group was left to submit a buyout proposal to UAL's board that called for substantially less cash than the $150 a share that the banks would have helped finance. As an alternative, the unions also proposed an all-paper transaction.

In a statement early Tuesday afternoon, UAL said its board rejected the revised buyout proposal, which relied largely on uncertain financing from the airline's suppliers.

The buyout group had been seeking $2 billion in bank loans, but the lead banks were not prepared to go forward with the deal unless they were able to raise substantially more than that amount from a group of 22 potential lenders invited to participate in the bank syndicate.

At one point last week, it appeared that the momentum had turned in the lead banks' favor.

50% Oversubscription Sought

Each of the four was prepared to commit $350 million if the syndicate succeeded.

While the lead banks never

U.S. Agencies Signal End Of Leniency on Antitrust

By LINDA CORMAN

WASHINGTON — In urging the Federal Reserve Board to bar the proposed merger of two Hawaiian banks, the U.S. Department of Justice is sending a message that antitrust rules could stand in the way of consolidation in at least some banking markets.

The department's statement follows an Aug. 29 ruling in which two of five Federal Reserve governors voiced similar concerns about declining competition in Minnesota.

Leniency May Be Over

The two stands appear to signal that after a period of federal leniency in the 1980s, antitrust issues may again become a consideration in bank acquisitions.

The Justice Department's statement came last week on the application by First Hawaiian Inc., parent of Hawaii's second-largest commercial bank, to acquire First Interstate of Hawaii, the market's No. 5 bank, which is to be sold by an investor group led by former Treasury Secretary William E. Simon.

Such recommendations, which the Justice Department bases on an assessment of market concentration and other competitive factors, are not binding on the Federal Reserve, which must make the final judgment. But legal experts say the Fed was unlikely to oppose the department's reasoning.

How Merger Would Affect Market Share

Domination by Hawaii's two biggest banks would grow

	First Hawaiian before merger	First Hawaiian after merger	Bank of Hawaii
Market rank	2	2	1
Offices	58	78	70
Assets ($ bil.)	$5.5	$6.3	$8.7
Share of assets	28%	32%	46%
Deposits ($ bil.)	$5.0	$5.8	$7.5
Share of deposits	29%	34%	46%

Source: Justice Department, June 1990 data

Overconcentration Found

The Justice Department said its analysis showed an overconcentration in lending to small and medium-size businesses in Hawaii. After the merger, Justice antitrust experts said, only

EPA Easing Its Stance On Lender Liability

By STEPHEN KLEEGE

Backing away from a previous position, the federal Environmental Protection Agency is circulating a draft rule that softens its stance on lender liability in environmental cases.

The fate of the draft and its enforceability if adopted, however, are being questioned by experts. Some of them claim that the draft may cause additional problems for banks that acquire contaminated properties, usually through foreclosure.

Court of Appeals Ruling

The EPA draft follows a ruling in May by the 11th U.S. Circuit Court of Appeals in Atlanta that Fleet Factors was liable for the cleanup of a defunct textile company due to the financial company's "participation in management." Fleet Factors is a subsidiary of Fleet/Norstar Financial Group Inc.

In that case, the court, broadening previous legal rulings, said

Visa Limits Affinity Cards

In a slap at American Telephone & Telegraph Co. and other nonbank promoters of Visa cards, the board of Visa U.S.A. announced new rules Tuesday to limit nonbanks' participation in the credit card system.

The rules require affinity cards – issued by banks but carrying the names of other companies, associations, or causes – to be connected only to an account maintained by a Visa-issuing institution. Also, nonbank entities will not be allowed to finance more than 25% of a program's receivables.

With more than 5 million cards issued since its launch in March, AT&T's Universal Card is the biggest affinity product. AT&T has an agreement to purchase receivables from Synovus Financial Corp., the issuer.

The rules apply to new programs. Existing ones, such as AT&T's, will be examined. "It would be premature to complete our review" while the AT&T card is studied by the Federal Reserve Board and Federal Communications Commission, said Visa president Charles T. Russell.

For Master Chef of the Workout, New England Is a Tempting Table

By TERESA CARSON

LOS ANGELES — New England real estate may be worse than many people realized. Kenneth Leventhal & Co. has opened an office in Boston.

The nation's 11th-largest accounting firm thrives when real estate markets go bust, and Leventhal sees plenty of opportunity in New England. Comanaging partner Stan Ross expects the Boston office to employ 30 professionals fairly quickly and have 100 within three to five years.

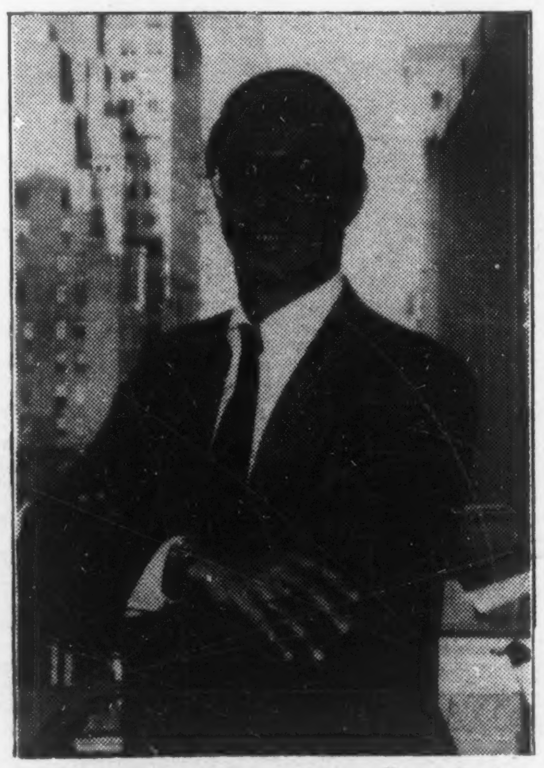
"Because of the recession in New England, we expect a faster rate of growth there" than at our 12 other offices, he said.

No Plain Vanilla Audits

Calling Leventhal an accounting firm is almost like calling Julia Child a short-order cook. Plan vanilla audits are not the Los Angeles-based firm's mainstay.

Its expertise is structuring, evaluating, and working out complex real estate deals. It also does extensive consulting work for banks and other financial services companies.

"We don't call Stan Ross in at $400 per hour to do our books," says Theodore Leary, a principal with developer Lowe Enterprises in Los Angeles.



Peggy Turbett

Stan Ross
Kenneth Leventhal & Co.

Leventhal's extensive roster of high-profile clients includes developers Donald Trump, John Portman, Trammell Crow, and Donald Bren. The federal government also is a prominent client.

COMMENT/ *By Mark Leemon*

RTC's Branching Victory Was a Boon for Taxpayers

Recently, the U.S. Circuit Court of Appeals for the Eighth Circuit, in a split decision, filed an opinion that is good news for the American taxpayer.

In Arkansas Independent Bankers Association v. Resolution Trust Corp. (Arkansas), the court reversed the lower court in Little Rock and upheld a regulation adopted by the Resolution Trust Corp., the temporary federal agency established by Congress to handle the gargantuan task of cleaning up the savings and loan mess.

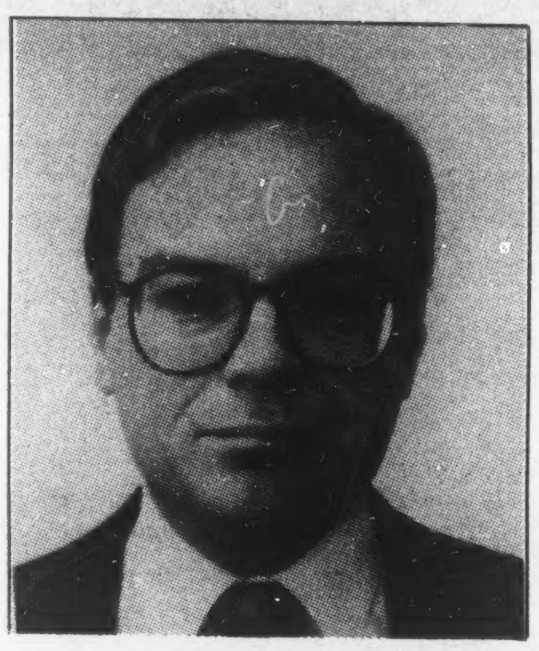
Bolsters the RTC's Arsenal

The regulation asserts that the RTC is empowered to preempt state branching statutes as it structures acquisitions of failed and failing thrifts. The eighth circuit thus adds to the RTC's arsenal for enticing private capital in its sale of thrift assets and suggests that future preemption by the RTC of other state barriers – such as prohibitions against insurance activities – will survive judicial review.

This decision marks the conclusion of the third of three court challenges to the RTC's authority to preempt state branching law. The two other cases, one in New Mexico (which the federal government won) and the other in Colorado, will be resolved by the 10th circuit. The Colorado case, which was the first case filed, was finally resolved against the federal government on Sept. 5 and will soon be on its way to the 10th circuit.

The legislative underpinning to the RTC's regulation is section 217 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, which addresses federal assistance for troubled institutions.

The first paragraph of section 217 gives the RTC the power to authorize emergency transactions "notwithstanding any provision of state law," an extraordinary grant of authority that would enable, for example, the RTC to allow an out-of-state bank holding company to acquire a thrift regardless of state laws that prohibit such companies from owning financial institutions.



"Such a broad delegation of authority should have made any challenge to the RTC an easy case to defend."

Such a broad delegation of authority should have made any challenge to the RTC an easy case to defend. Unfortunately, section 217 has additional, though ultimately vague, language that addresses the issue of branching.

Paragraph (4) states that if "a merger, consolidation, transfer, or acquisition under this subsection involves a savings association eligible for assistance and a bank or bank holding company, a savings association may retain and operate any existing branch or branches or any other existing facilities." As written, the sentence is curiously redundant because savings associations already have the authority under federal regulations to branch statewide irrespective of state laws.

In its notice of proposed rulemaking, the RTC interprets the underscored phrase "savings association" to mean essentially "resulting institution." Otherwise, the RTC reasons, the terms "merger" and "consolidation" would have no meaning. The district court judges in Arkansas and Colorado read the sentence in paragraph (4) as limiting the RTC's preemptive authority in paragraph (1).

After examining the same language, the eighth circuit concluded that Congress had not directly spoken to the branching question. The eighth circuit then

COMMENT/ *By Stuart C. Stock*

Market Concentration Index Slips as a Merger Yardstick

In recent years, it has appeared that merger antitrust analysis at the Federal Reserve Board – and at the other federal banking agencies – was often becoming little more than a numbers game.

With the general acceptance of the Herfindahl-Hirschmann Index as a market concentration gauge and the apparently irreversible triumph of the Reagan antitrust revolution, it seemed increasingly certain that any transaction satisfying the 1800/200 HHI standard would trigger no competitive concerns at the board and was assured of approval.

The HHI is calculated by summing the squares of each participant's market share.

If, for example, there are six competitors with market shares of 30%, 20%, 15%, 15%, 12%, and 8%, you would square each of the figures and add them, giving an index of 1,958.

Under the 1800/200 HRI standard, a transaction ordinarily is not thought to pose even a potential antitrust concern unless the post-consummation HHI would exceed 1,800 points and the HHI increase caused by the transaction would exceed 200 points.

Index Was Considered Decisive

To be sure, the board, like other regulators, occasionally did look beyond HHI data to quantitative factors, such as the potential for new entry, where a transaction did not satisfy the 1800/200 HHI standards.

But in many quarters, there was a growing assumption that any transaction in compliance with the 1800/200 HHI standard as applied by the board (which means counting local thrift deposits at 50% weight together with local bank deposits in calculating market shares) was within a safe harbor from an antitrust perspective.

Criterion No Longer Safe

After the board's recent Norwest decision, however, that assumption no longer appears entirely safe. In Norwest, the board approved by 3 to 2 a proposal by Minneapolis-based Norwest Corp. to acquire First Minnesota Savings Bank, a financially troubled Minneapolis thrift.

The focus of the board's competitive concern was the Minneapolis-St. Paul market, where Norwest already was the second largest competitor with 21.6% of the local deposits as calculated by the board while First Minnesota was the fifth largest competitor with 3.6% of such deposits.

In this context, the board determined that the proposed acquisition would increase the market's HHI by exactly 200 points to a total of 2,012 points.

Index Appeared Acceptable

The acquisition thus was apparently within the 1800/200 HHI safe harbor, albeit on the outer limits. The board in recent years has evidenced little reluctance to approve other transactions that, on their face, would seem considerably more troublesome under the board's HHI standard.

There was a growing assumption that any transaction meeting the HHI standard was safe.

For instance, only in July of this year, the board was presented with a proposed acquisition of the sixth-largest banking organization serving a local Maryland market by the second-largest organization that would have increased the market's HHI 258 points to 2,231 points (even after including local thrift deposits as weighted by the board).

The board approved this proposal without dissent and without relying on any additional factors other than simply the number of competitors that would remain in the market after consummation.

Despite such board rulings, even the three governors voting for approval in the recent Norwest decision did not suggest that the acquisition proposed there presented no competitive problem based on the HHI data.

Instead, the majority concluded that public benefits associated with the acquisition outweighed the adverse competitive effects that might result within the Minneapolis-St. Paul market.

The particular public benefits to which the majority referred were Norwest's planned infusion of sufficient capital into the resulting institution to remedy First Minnesota's negative net worth, and thus the resolution of a financially troubled thrift situation without any cost to federal deposit insurance funds.

Other Bids Noted

The two dissenting governors in the Norwest decision disagreed only with the majority's conclusion that the public benefits of Norwest's proposal were sufficient to outweigh the likely adverse competitive effects.

The dissenters noted that bids for First Minnesota requiring no federal assistance also had been submitted by several other potential acquirers that did not already hold a large share of the Minneapolis-St. Paul market's deposits.

In the dissenters' view, these other bidders clearly would have been competitively preferable acquirers, since the sale of First Minnesota to one of them would have strengthened a smaller competitor rather than further bolstering one of the market's leading organizations. Accordingly, they did not not believe that the public interest clearly favored Norwest's proposal.

Problem of Perspective

The dissenters' view arguably finds some support in the antitrust laws' "failing firm" doctrine, which generally holds that a target's troubled condition is no defense to an otherwise anticompetitive acquisition unless the acquisition is the least anticompetitive solution available.

From the dissenters' perspec-

SMALL BUSINESS

Few Banks Offer Accounts With Specialized Features

By LAURYN FRANZONI
Special to the American Banker

Despite the current emphasis on small-business banking, most institutions do not offer unique demand deposit accounts for these customers, according to a survey by Trans Data Corp., an *American Banker* affiliate.

In a poll of 77 banks and thrifts, Trans Data found that only 30% offer a demand deposit account specifically for the small-business market. Less than 10% of the respondents said they were considering or planning to offer such an account.

Furthermore, the typical small-business checking account is merely a simplified version of an institution's commercial account, but with added volume and balance restrictions that result in fee discounts, the researchers concluded.

Departure from Previous Survey

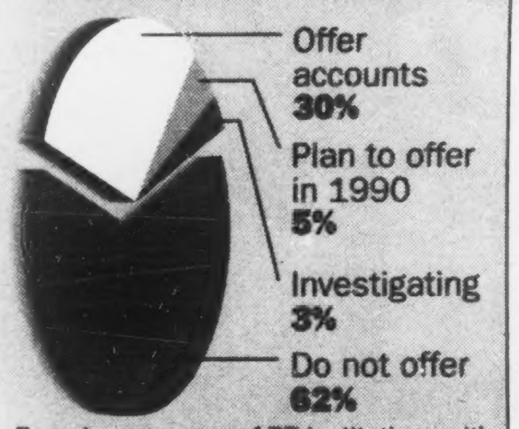
The Trans Data survey seems to indicate less dedicated activity in the small-business market than previous research had found. In a Consumer Bankers Association poll in 1989, 95% of the 66 member institutions that responded said they offered a small-business checking account with fees based on balances and activity. Fifty percent said they offered checking accounts with a single fee to small businesses.

The apparent disparity in the surveys may reflect semantics, according to bankers who track small-business banking trends.

"The checking account is the core of the relationship," said Sergio S. Ora Jr., senior vice president of small business and custom banking for Mellon Bank, Wilmington, Del. Mellon does not offer a customized account for small businesses but does group other services around its standard commercial checking account based on the small-business owners' needs.

Specialized Accounts

Percentage of banks and thrifts offering demand deposit accounts tailored to small businesses



Based on a survey of 77 institutions with at least $1 billion in deposits

Most Common Features	
Minimum balance	35%
No account analysis/ earnings credit	30%
Free processing of some items	26%
No minimum balance	26%
Unique fee schedule	13%
Overdraft line of credit	13%
Automatic investment	13%
Interest bearing account	13%
Noninterest bearing account	13%

Source: Trans Data Corp.

While some institutions may be trying to differentiate themselves by offering an account that carries a specific small-business name, Mr. Ora notes that it is likely that the "guts of the product may not be different from the guts of any other checking account."

Mr. Ora, who is a member of the Consumer Bankers Association's small-business committee, said larger institutions often find that cost and system maintenance prohibit them from offering a unique account for small businesses. Small institutions, he said, are more likely to create such accounts.

According to Trans Data, the characteristics of institutions offering small-business accounts vary as much as their small-business customers. The survey group had deposits ranging from $1 billion to $35 billion. Nearly 25% of those offering the small-business product have a deposit base of less than $2 billion, but an equal number had deposits of more than $6 billion.

More than half the survey group said their business was evenly split between retail and corporate customers. Thirty-five percent indicated they focus on the retail market, and 9% said they focus exclusively on the corporate side.

Banks generally define small-business customers by annual sales volume. Nearly four of every 10 banking respondents capped the business at $5 million. About one-third of the bankers include businesses with sales of $5 million to $10 million.

Range of Balances Is Wide

The average balance required by institutions for the small business account is $2,200, but the range is wide, from $250 to $7,500. Researchers say the accounts average 350 items each month.

Since most banks simplify their commercial checking account for the small-business customer, fees are usually lower than those on a standard commercial account, the survey found. Fees are also more likely to be based on enhanced services, such as cash management and automatic investment accounts.

The most common small-business account identified by Trans Data incorporates a minimum balance requirement, offers no account analysis or associated earnings credit, and provides processing of a limited number of deposited or paid items free of charge.

Supermarket Branches Gain Favor

Fifth Third and Mellon Among Those Adding Units

By ELLEN BRAITMAN

Fifth Third Bancorp said it is planning to expand its supermarket banking program by opening five to 10 new in-store facilities and placing more automated teller machines in Finast supermarkets in northeastern Ohio.

Cincinnati-based Fifth Third, which already operates 27 branches in Kroger stores in Ohio, Kentucky, and Indiana, is in the forefront of a growing movement among banks seeking to reach customers at more convenient times and places than present branches afford.

In another development reflecting the growing interest in supermarket banking, the flagship subsidiary of Mellon Bank Corp., Pittsburgh, last week opened the first of a planned 21 offices in Giant Eagle stores in western Pennsylvania.

Expansion Near Completion

Also, Union Bank, San Francisco, recently opened the 13th of 15 full-service branches that are to be in place by yearend in Southern California supermarkets.

Fifth Third's new branches will be in Finast supermarkets in the greater Cleveland area. Some of the locations had formerly been outlets of the failed Broadview Savings Bank and were closed after federal regulators seized Broadview.

Fifth Third keeps its branches open seven days a week, with extended hours on weeknights.

The $7 billion-asset Cincinnati banking company, as well as Cincinnati-based Kroger, have been pioneers in the supermarket banking business.

Mellon Bank

MELLON MOVES IN: On Oct. 1, Mellon Bank opened a branch near the dairy counter at Giant Eagle in McMurray, Pa.

A Growing Number

There are now 847 full-service branches operated by 196 banks in supermarkets across the United States, said John W. Garnett, executive vice president of International Banking Technologies, an Atlanta company that specializes in helping banks and thrifts open in-store facilities.

Mr. Garnett said placing bank branches in supermarkets is "one of the fastest-growing trends in banking today." Most of the growth has taken place in the past four years, and the number of new branches continues to rise.

A 1989 survey by Sheshunoff & Co., Austin, Tex., found that 8% of 250 banks in a nationwide sample planned to open supermarket branches this year – almost equaling the 10% that planned ATM installations.

Benefits Are Hailed

"Supermarket banking is an excellent opportunity for us to expand our one-stop shopping concept and better serve our customers, especially those who tend to shop when banks are traditionally closed," said William Holsworth, executive vice president and Ohio division president of First National Supermarkets Inc., which runs 32 Finast markets in northeast Ohio.

Broadview Savings offered limited banking services in some Finast stores until Sept.

BankAmerica's Travelers Checks Face Long Odds

By JEANNE IIDA

NEW YORK — BankAmerica Corp. and Barclays Bank face enormous obstacles in pursuing their goal of becoming No. 1 in the travelers check market.

The banks, which announced last month that they would create a joint venture to market Visa travelers check to other financial institutions, will focus on sales overseas, particularly in the Asia/Pacific region, a BankAmerica executive said last week.

But they will have to crack the U.S. market if they want to challenge industry leader American Express Co. in the near future.

ANALYSIS: *Follow-up on the news*

The United States is the single largest segment of the slow-growing market, which is expanding only about 5% to 6% a year.

Because American Express does not separate worldwide and U.S. sales, the exact size of the U.S. market is not known. Spencer Nilson, editor in chief of *The Nilson Report,* a Santa Monica, Calif.-based newsletter, estimates that the United States represents 40% of worldwide travelers check sales.

Many U.S. banks offer American Express travelers checks to satisfy their customers' preference, and persuading them to switch will be no easy task. Only about 26% of Visa's worldwide sales are in the United States.

Venture Seen 'a Contender'

"There's no way they can challenge American Express for No. 1 worldwide," Mr. Nilson said of the Barclays/BankAmerica venture. But the combined operation could be a contender for the top spot outside the United States, he said.

Barclays and BankAmerica hope to capitalize on what they say are foreign bankers' fears of retail competition from American Express and Citicorp by offering so-called private-label checks. The Visa checks will bear the name only of the selling bank and not of the issuing bank.

Foreign institutions may be inclined to switch from American Express or Citicorp checks in the interest of not promoting a potential rival for retail business, according to the banks.

Potential for 'Synergy'

"If a bank is selling a brand of travelers check not consistent with the brand of credit card they're selling, there can be great synergy for them" in switching

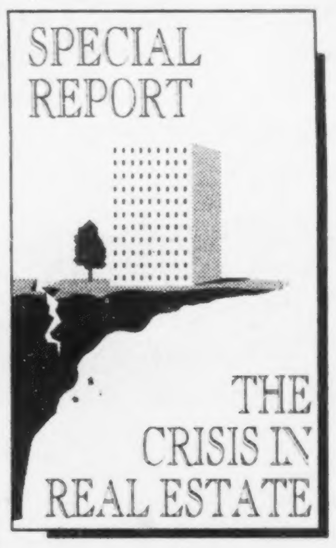
Fate of Banking in the 1990s Hinges on Real Estate Loans

By STEPHEN KLEEGE
First of a Series



SPECIAL REPORT
THE CRISIS IN REAL ESTATE

The real estate problems that emerged a year ago have developed into a full-blown crisis that will pressure bank earnings, shape strategy, and – in some cases – threaten corporate survival for the rest of the decade.

While much has been made of loans to lesser-developed countries and the more recent phenomenon of nonperforming loans for highly leveraged transactions, banks have much more at stake in real estate.

In 1987, big banks' reserves for Third World debt dominated their earnings reports, as real estate is now beginning to do. But Third World debt amounted to just 3.7% of banks' total loan portfolios, according to figures compiled by Veribanc. Since then, the industry's exposure to lesser-developed-country loans has fallen to 1.76% of outstanding loans, SNL Securities' data indicate.

Similarly, exposure to highly-leveraged-transaction debt was only 4.69% of total loans at June 30, SNL calculations showed.

Exposure Huge, and Rising

By contrast, government data showed banks' commercial real

RTC Weighs A Financing Plan to Woo Banks' Help

By BARBARA A. REHM

WASHINGTON — The Resolution Trust Corp. is developing a multiple-layer financing plan that would give banks a key role in the sale of $50 billion in real estate and nonperforming loans seized from failed thrifts.

The plan is the latest under consideration by the RTC to accelerate asset sales in bulk, meaning at least $500 million packages. It could end the impasse between banks and the bailout agency over the guarantees that the government must offer to coax private-sector lenders into the thrift cleanup.

The multilayered financing program – so called because it involves investor equity, junior collateralized debt, and senior bank debt – was developed by Andrew Lovegrove, an assistant to Comptroller of the Currency Robert L. Clarke, who is an RTC board member. Industry and agency sources explained its details last week to the *American Banker.*

Banks Leery of Risk

To date, banks have been unwilling to run the risk of lending against the RTC's low-quality assets. The banking industry has pressed the RTC to guarantee such loans. The bailout agency at first resisted, but its officials now recognize that the private sector needs enticements before it will help finance thrift cleanups.

The multilayer program is de-

Tough Times Are Party-Pooper for ABA

By ROBERT TRIGAUX

WASHINGTON — Many of banking's traditional trappings have faded in recent years: weekday golf outings, free lunches in the corporate dining room – and the annual trip to the American Bankers Association convention.

Attendance at the October convention, usually held in a popular tourist city, has slipped conspicuously in recent years. For this year's meeting, which will open Saturday in Orlando, Fla., the ABA is expecting about 4,500 people, in contrast to the 10,000 to 12,000 attracted to such sites as Honolulu, New York, and New Orleans early in the high-rolling 1980s.

Behind the Slide

The 4,500 expected – down 18% from last year's attendance in Washington – include not only commercial bank executives but also their spouses and the salespeople exhibiting wares.

Bankers, consultants, and current and former ABA officials generally agree that the convention's decline is the result of many strong forces that work against a large, five-day gathering of the industry elite. Banks are under enormous pressure to cut costs, and trips to general conventions are often axed as superfluous.

Correspondent Business Fades

For decades, the ABA annual convention served as a showcase for big correspondent banks to entertain their downstream client banks, and for many bankers and corporate executives to enhance relationships with entertainment.

Today, the traditional correspondent business and the 'wining-and-dining surrounding it have all but evaporated, victims

COMMENT/*By Paul S. Nadler*

Customers Switch Banks For Many Good Reasons

I have always felt in my 40 years of teaching banking and 30 years of writing this column every week that my job is to be an informed outsider who observes what bankers don't see themselves.

Maybe my best example of the role an outsider can play took place when the West Virginia Bankers Association invited me to meet with members of that state's legislature to try to raise the usury ceiling that limited what a bank could charge on a mortgage loan.

"I don't see any trouble getting a mortgage at 5%; I just got one last month," one legislator exclaimed. I laughed and said, "That's because you are in the legislature and on the banking committee. Who would turn you down? Try it without those advantages."

I think I made the point eventually.

Customer's View

Another area where I have tried to give bankers the outsider's view is in the customer's opinion of plastic – both credit cards and ATM debit cards. And, boy, have I had a lot of experience there!

Let's take credit cards first. I never believed in them, but I took one because a friend at a New York bank was trying to help his secretary win a contest in which every card you solicited won you points. Once I used the card and saw that I could buy an airline ticket without 10 minutes of writing identification information on the back of my personal check, I was hooked.

But in the years I have been a plastic junkie, I have changed charge cards from issuer to issuer for reasons that made sense to me and should have made sense to the banks that were issuing them.

Reasons for Switching

First, I switched from the New York bank that hooked me on plastic to a Philadelphia bank because it put your picture on the card – which I thought was a practical feature to give me protection.

I found, however, that no one ever looked at the picture. I could have used the name of a famous world villain on the card, and I am sure many stores would simply have said, "Good morning, Mr. Hitler, you look different without your mustache."

I gave up that card when they misinscribed a check I sent for $800 to be a check for $80 and sent me a nasty note saying that I was violating the fraud laws and would be prosecuted if I did not send the card back in 10 days. My letter of explanation was never answered, nor was my card returned.

"Thinking of the customer too late is just as bad as not thinking of him at all."

Next I went to a bank in Worcester, Mass., that offered a 2% rebate on all purchases with its Visa card. It was wonderful. The only trouble was, it was too wonderful. They decided they didn't need New Jersey people getting this rebate, so they threw all nonlocal cardholders out of the plan.

Needing a card when the Worcester bank kicked me out, I went to my local bank, which got me a Visa card from another New York bank. But here again, I learned that what bankers think is good for the bank is not so good for the customer.

Stingy Policy Backfires

I asked for a raise in my credit limit from $3,500 to $5,000 and was denied, as the bank said it didn't offer this. Then, immediately after I switched again to the card of a bank I know well, where they would give me the $5,000 limit, the New York bank sent a congratulatory letter saying it was going to raise my limit to $5,000. Thinking of the customer too late is just as bad as not thinking of him at all.

I'll admit that I get other rebate offers among the many letters I get annually selling a credit card, but all now have a gimmick. I have to borrow money from the start at their cash advance rate to get the discount on purchases, which of course means that every usage of the card leads to an interest charge immediately. And I never get my 25 days of grace, which I cherish. (I probably would cut short a vacation to get back in time to meet my credit card payments before I lose the grace period and the bank charges interest.)

When Cash Isn't Cash

Then, along comes the Discover card with its rebate offer. I have visions of the old days with my card from the Worcester bank. But this only lasts until I get my first rebate. It is not cash but rather a Sears gift certificate, and I never shop at Sears. I feel cheated and have given up that card, too. (I keep the gift certificate as a reminder that advertising and reality often differ.)

Where do I stand now? All my bank cards charge a fee. None offers auto rental collision protection without a premium for a gold card. AT&T now offers a free card that does this. It looks good, and maybe it comes from the fact that the phone company thought more about what customers want and less about what the issuer wants. In any event, I'm switching.

And while I am at it, my local bank has announced that it will charge $12 a year for my ATM card – so that I can pay for the privilege of helping it reduce lobby traffic and cut teller costs!

I don't mind paying a fee every time I use the card at another bank's ATM. But to be charged to use a local machine and save the bank from having a teller give me my money is just plain crazy. □

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at the Rutgers University Graduate School of Management.

COMMENT/*By Mark J. Riedy*

Healthy Regimen Needed For the Home Loan System

On Aug. 29, the Federal Deposit Insurance Corp. decided to postpone for 18 months a decision on allowing Wauwatosa Savings and Loan Association in Wisconsin to exit the Federal Home Loan Bank System.

That blip in the nation's financial history brings into sharp relief the need to address a crucial issue left over from last year's S&L legislation: the problems of the Home Loan system. Those problems threaten the stability of thousands of financial institutions and, if allowed to grow, could add billions to the cost of resolving the S&L crisis.

Dividends Help Earnings

For 50 years, the system has served both its voluntary (savings bank) and involuntary (S&L) members as a source of income in the form of dividends, bank services, and liquidity.

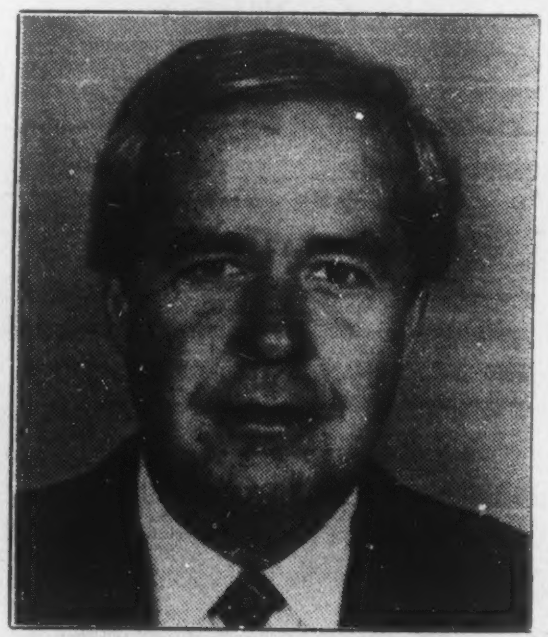
Members invest capital in the stock of one of the 12 regional banks in the system, and the historically high dividends contribute significantly to earnings. Members borrow money from their Home Loan banks to lend for housing in their communities at rates lower than those that would be available to relatively small borrowers such as Wauwatosa.

The system also assists in check-clearing, since members can maintain their own checking accounts in their regional Home Loan Bank.

Offering liquidity, services, high dividends, and attractive borrowing rates, the system has bolstered the competitive position of thousands of savings institutions across America. Today, about 25% of the savings industry's capital is invested in Home Loan Bank stock.

Reform Act Triggered Problem

So how did problems enter this picture? The triggering event was the S&L crisis, and the vehicle was the Financial Institutions Reform, Recovery, and Enforcement Act.



"About 25% of the savings industry's capital is invested in Home Loan Bank stock."

As that legislation was being considered last year, the Home Loan banks had $2.1 billion in unencumbered retained earnings. Congress, looking for every possible source of funding before going to the taxpayer, took all retained earnings through 1991 away from the Home Loan banks – just as it had taken $1 billion out of the system in 1987 – and used those funds to finance the process of resolving the insolvent thrifts.

The thrift-bailout law went further. It also required the system to contribute $380 million each year to help clean up troubled thrifts, starting in 1992. Many objected at the time that this action would result in serious long-term problems for the system. Singled out was the fact that the law called for a specific dollar contribution from the system rather than a percentage of income.

An Additional Burden

The law also required a contribution for affordable housing: at least $50 million each year through 1993, at least $75 million in 1994, and at least $100 million in 1995 and thereafter.

The significance of these contributions was clear to analysts. But the massiveness of the legislation and the speed with which it moved led lawmakers to put long-term possibilities on the back burner.

In the summer of 1989, the system was coming off of several years of record high earnings. The $300 million in continuing contributions to the program of resolutions, for instance, seemed reasonable – only 20% of annual income.

Predictions of a significant drop in Home Loan banks' income and questions about what the contribution might mean in such a case were set aside so that Congress could deal with more urgent problems.

Today, however, those predic-

Basel Group to Recommend Specific Ceilings on Loans

By JOHN EVANS

LONDON — Seeking to avoid excessive concentration of lending risks, the Basel Committee of banking supervisors plans to recommend specific ceilings on how much banks can lend to customers.

These limits will be based on between 10% and 40% of a bank's total capital made in the form of loans to "private-sector nonbanks," mainly corporate clients.

This proposal emerged from a meeting of the Basel Committee in Frankfurt, Germany, this week during the sixth international conference of banking supervisors.

Huib Muller, the Dutch central banker who chairs the Basel Committee, said Friday that a 25% limit on capital was the "preferred midpoint" between the 10% and 40% bands.

Proposals Endorsed

Mr. Muller said the Frankfurt conference had provisionally endorsed the committee's proposed recommendations.

"The plans for a maximum have now been presented to the supervisors, who will get about half a year to react to them," he said. A final version of the current draft paper would be published early next year, he added.

Special consideration should also be paid to loans to groups of companies in one industry sector, Mr. Muller said. This group of loans should be subject to much stricter guidelines, a move regulators privately said underlined concern about large real estate exposures in the banking system.

No Word on Capital Rules

Mr. Muller did not say whether the committee had taken any accommodative action to ease the current Bank for International Settlements' capital adequacy guidelines, under which capital should be equal to at least 8% of total assets. The committee was scheduled to examine whether extra classes of securities could be counted as capital under the Basel accords because of pressure on Japanese and some U.S. banks.

However, he confirmed that the committee was preparing proposals for the supervision of banks and securities firms' business involving price fluctuations in the capital, money, currency, and share markets.

These proposals will be presented to banks and securities houses, as well as supervisory authorities in the leading industrial nations, for their assessment next year.

... by country

JAPAN

Mitsui Taiyo Kobe Bank is planning to disperse 20 to 30% of its headquarters staff to 620 local branches to increase its emphasis on retail banking, a bank spokesman said.

Taiyo Kobe Bank and Mitsui Bank merged on April 1 and now have three major offices in Tokyo and in Kobe with total headquarters staff of about 6,000, he said.

SOVIET UNION

The first Soviet commercial bank to be controlled by Communist Party workers has been set up in Leningrad, a communist official said Friday.

Arkady Krutikhin, general administrator of the regional Leningrad Party Committee, told reporters the bank was being established on orders from the party's central committee.

Mr. Krutikhin said he was named chairman of the new bank, to be called Bank Rossiya.

The bank will start operations with a capital base of $5.1 million at the official exchange rate, drawn from the party's dues and budget, Mr. Krutikhin said.

Bank Rossiya plans to finance restoration projects by the city of Leningrad, the country's second-largest city, whose streets and buildings are badly in need of repair.

According to Mr. Krutikhin, the bank will also finance joint ventures organized by the Communist Party.

A large number of privately owned commercial banks now operate in the Soviet Union.

THE PHILIPPINES

A leading Philippine senator has accused the International Monetary Fund of trying to keep the heavily indebted country in financial bondage.

Senator Wigberto Tanada called for the Philippines to adopt a nationalist economic policy that would build up industries behind a protective tariff wall, instead of agreeing to an IMF program dominated by debt repayment and trade liberalization.

"More and more Filipinos are beginning to see that the real intention behind these policies is to keep the country perpetually in financial bondage," Mr. Tanada told a group of financial executives in a speech.

"We need not get stuck with the IMF program of a debt-fueled, import-intensive, export-oriented, cheap labor-based, agro-industrial development," Mr. Tanada said.

He said it was imperative for the Philippines to maintain a policy of protectionism, which he said was the way South Korea and Japan built their economies.

Brazil Debt Talks Near Stalemate

Session Ends with No Progress on Payment Schedule

By JAMES R. KRAUS

NEW YORK — Setting the stage for an early stalemate, U.S. and other banks rejected last week Brazil's proposals for massive cuts in interest payments and demanded that the country pay at least a portion of its arrears before talks can continue.

"Clearly, [the proposals] are not acceptable to us," said a senior banker who participated in three days of talks with Brazilian negotiators that ended Friday.

Jorio Dauster, Brazil's top negotiator, rejected last week any payment of interest arrears to banks until after an agreement is reached with banks.

Pressure on the IMF

However, senior bankers close to the negotiations said that banks would press the International Monetary Fund to withhold disbursing a $2 billion bridge loan to Brazil if the country does not begin repaying $8 billion worth of interest arrears it has accumulated since July 1989.

Fund officials said last month they would not release the $2 billion bridge loan until Brazil reaches substantial progress in talks with banks, while banks have threatened to further reduce some $11 billion in short-term trade lines to Brazil if the talks fail.

The talks were part of an initiative launched by U.S. Treasury Secretary Nicholas F. Brady in March 1989 to reduce the foreign commercial debt of troubled Third World countries.

Agreements Reached Elsewhere

Agreements have already been reached with Mexico, the Philippines, Costa Rica, Morocco, and Venezuela. A sixth debt reduction agreement is being negotiated with Uruguay.

In the past three years, Brazil has cut between $10 billion and $12 billion from some $60 billion in medium-term and long-term debts it owed foreign commercial banks by buying back the debt on secondary markets or converting it into domestic bonds or equity.

Negotiations are focusing on how to reduce the $45 billion the country still owes foreign banks and some $4 billion more acquired by Brazilian banks.

In a departure from previous debt reduction agreements, Brazil proposed Thursday to drastically slash the interest and extend the maturities on tens of billions of dollars it owes foreign commercial banks without providing banks with any guarantees for repayment.

Senior bankers in New York said Friday that two of the three options Brazil proposed call for cuts in interest payments of more than 50%.

A third proposal calls on banks to consolidate Brazil's interest arrears and principal into 45-year zero-coupon bonds.

Zero coupon bonds pay principal and interest in one lump sum when bond matures.

Bankers said Friday that they found the proposals confusing and viewed them as no more than an opening round in what promises to be extended talks.

The 22 banks on the Brazilian bank advisory committee are scheduled to meet this week to go over economic data supplied by Brazil and draw up their own proposals for a debt reduction package. □

Hongkong and Midland May Delay Merger

By JOHN EVANS

LONDON — The planned combination of Midland Bank PLC and Hongkong & Shanghai Banking Corp., a linking that would form one of the world's top 10 banking companies, has reportedly been delayed because of souring lending business at both companies.

The alliance had been depicted by the two partners as creating a new global superbank, combined Hongkong Bank's Asian business and the European organization of Midland, Britain's fourth-largest bank.

In the United States, the alliance was scheduled to center largely on Marine Midland Banks Inc., Hongkong Bank's American subsidiary.

A spokesman for Midland declined to comment Friday on a report, in the *Financial Times,* that the alliance had been postponed because of difficulties facing both groups. Industry analysts expressed little surprise.

Both banks have been adversely affected by economic downturn in the United States, Europe, and Asia. In the first six months of 1990, Midland's trading earnings before bad and doubtful debts fell 20% to $707 million while Hongkong Bank's net earnings fell 20% to $197 million.

Midland's chairman, Sir Kit McMahon, has previously indicated a delay is possible, said Alison Deuchards, banking analyst at Smith New Court, a London brokerage firm. The essence of the published report was "made very clear" when the Midland officer announced the bank's second-quarter earnings, she noted.

Hongkong Bank owns 14.9% of Midland, a stake it has previously pledged not to increase until after a standstill agreement runs out Dec. 22.

The *Financial Times* said the banks would extend this agreement while at the same time reaffirming their plans for an eventual combination.

Christopher Wheeler, an analyst at Shearson Lehman Hutton, London, said a formalized standstill agreement may now be seen as unnecessary. □

Marketers Slow To See Potential Of Image Systems

By KAREN GULLO

Although many banks plan to invest millions of dollars in imaging systems, bank marketing executives remain skeptical about the technology's benefits.

Bank technologists have long touted image-based processing systems as vehicles not only for cutting back-office costs, but also for gaining market share through new products. A recent study, however, reveals their marketing brethren are not so sure.

ANALYSIS: *Follow-up on the news*

The study, which was based on a poll of 50 marketing executives from banks chosen at random by Trans Data Corp., an affiliate of the *American Banker*, indicates that marketers are either unaware of imaging's potential benefits or unconvinced that customers will want image products, such as monthly statements with miniature copies of check images.

That assertion flies in the face of previous studies, which indicate that consumers prefer monthly image-based statements to conventional ones with returned checks.

Lack of Inclination Seen

"What we see is a gap in communications," said Steven D. Matzke, document processing program manager at Trans Data. "Normally, operations and marketing go hand in hand, but this study says that the marketing side hadn't found the time or inclination to learn about consumer acceptance of image products."

Although only a couple of banks offer image-based account statements now, Fleet/Norstar Financial Group Inc., Mellon Bank Corp., Security Pacific Corp., and other large institutions are planning to do so. American Express Co. is the most well-known provider of image-based statements in the financial arena.

Widespread Skepticism

Despite such plans, half the marketers in the Trans Data survey said they believe imaging presents no significant marketing opportunities. While many respondents say imaging is cost effective for back-office operations, only 3% think the technology has the potential to increase fee income and improve customer service or convenience, the survey found.

Only 17% believe that a majority of their customers will

Business Booms For Top Firms in Mortgage Service

By PHIL ROOSEVELT

NEW YORK — Undaunted by a weak economy and a housing slump, the nation's top mortgage servicers have been growing at a breathtaking rate.

The 25 largest servicers – banks, thrifts, and mortgage companies – increased their portfolios by 18% in the 12 months that ended June 30, an *American Banker* survey shows. That was well ahead of both the 7.5% rise in total mortgage debt outstanding and the 9.7% growth posted by the top servicers in the previous 12 months.

SecPac and First Chicago Boost Loan-Loss Reserves

By TERESA CARSON
and NANINE ALEXANDER

Security Pacific Corp. and First Chicago Corp. reported on Monday sharply higher loan-loss provisions in the third quarter, leading to lower-than-expected profits.

Los Angeles-based Security Pacific said its earnings fell 27% to $135.3 million, or $1.05 per share, after adding $240.9 million to its loan-loss reserve. Analysts had expected the banking company to earn about $150 million.

First Chicago Corp. said it earned $36.2 million, or 45 cents a share, after almost doubling its provision for loan losses to $160 million. The results were far below the $60 million analysts had projected.

Loan Woes Spurring Large Provisions

	3Q provision ($ in millions)	Increase from 2Q

Funds Costlier for Japan's Banks

By JOHN EVANS

LONDON — As the flight to quality in international banking spreads, Japanese banks are being forced to pay substantial interest rate premiums for their short-term funding overseas.

The banks are paying an eighth to a quarter of a percentage point more than their U.S. and European competitors in the Eurodollar interbank market and the markets for Eurodollar certificates of deposits and commercial paper, European monetary sources say.

The rate premium will add hundreds of millions of dollars to their capital costs and could further blunt their global lending capability, the sources say.

"The Japanese banks are being squeezed as investors reduce their lines, cutting their overall exposures from the large levels in the past," said Len Harwood, money markets director for Union Bank of Switzerland in London.

The demand for greater compensation for lending to the Japanese reflects concerns over banking stability and credit quality in Japan after the 40% plunge in the Japanese stock

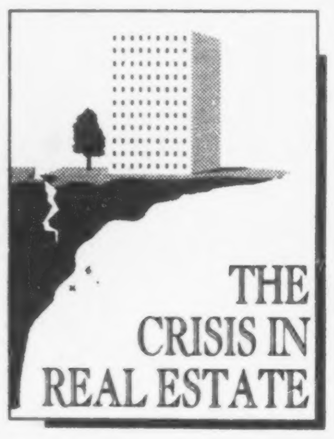
Shell Shock in the Realty Department

By JED HOROWITZ
Second of a Series

In Boston, veteran real estate banker Brian Sopp had tickets to the Red Sox-Oakland A's playoffs and no clients to share them with.

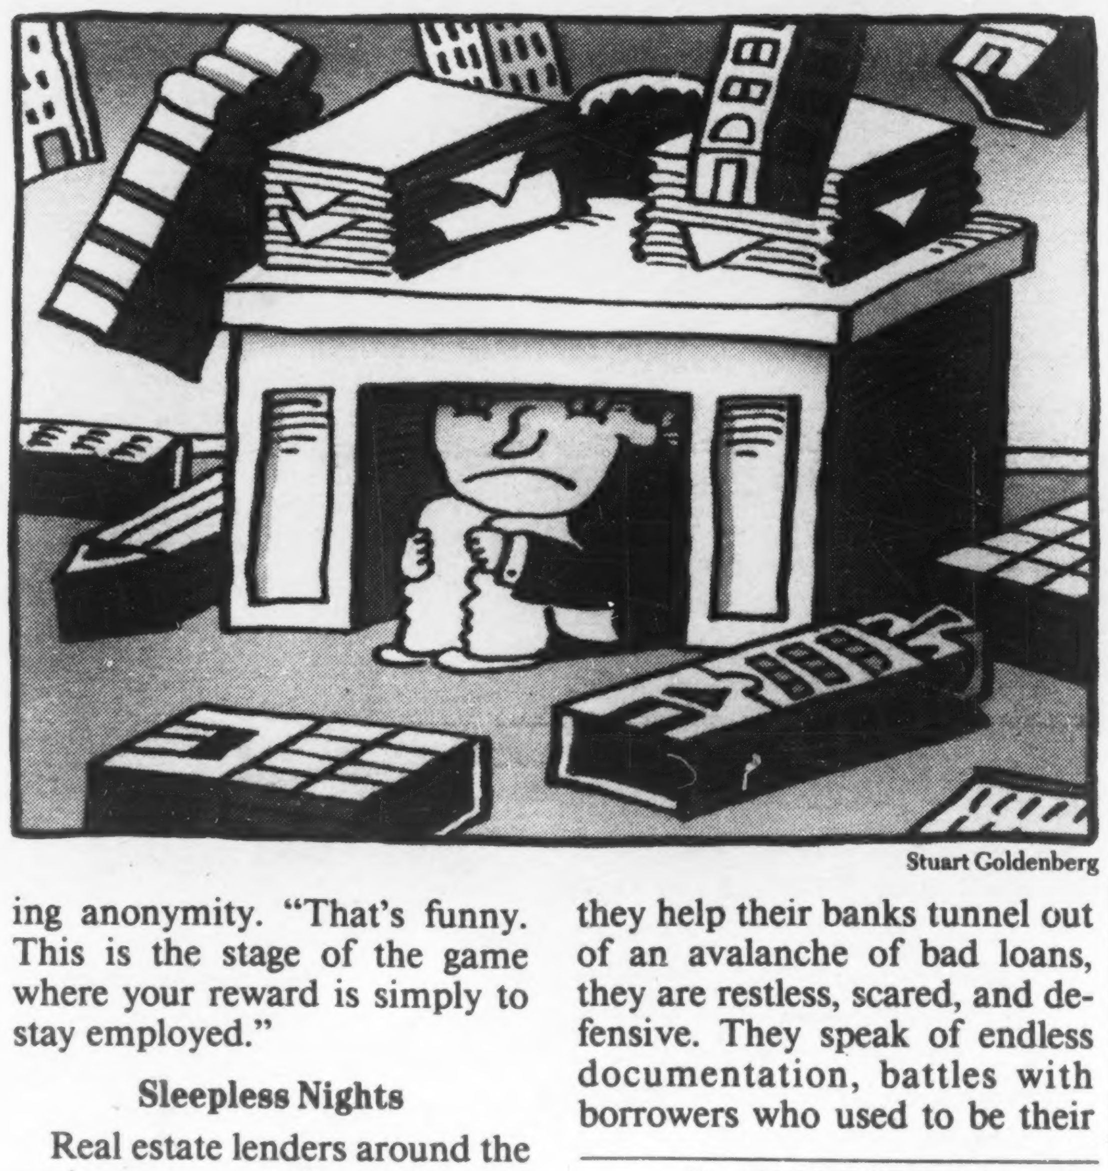


THE CRISIS IN REAL ESTATE

"There's no one I needed to or wanted to give them to," says Mr. Sopp, the head of U.S. Trust Co.'s real estate department. "We aren't looking for new business."

In New York, a lender-turned-workout specialist grouses about longer hours, extensive paper pushing, and bosses too frightened of regulators to make decisions.

"You're doing a story on the human side in real estate banking?" the banker says, demanding anonymity. "That's funny. This is the stage of the game where your reward is simply to stay employed."



Stuart Goldenberg

Sleepless Nights

Real estate lenders around the nation are not a happy lot. As they help their banks tunnel out of an avalanche of bad loans, they are restless, scared, and defensive. They speak of endless documentation, battles with borrowers who used to be their

COMMENT / *By Sanford Rose*

The Managerial Imperative

A growing number of banks are switching from a return-on-assets to a return-on-equity measure of performance. The reason is abundantly clear: The stock market is less interested in the ROAs of banks than in their risk-adjusted ROEs. The shareholder wants to know whether his bank is making more or less on his money than can be obtained from other investments of comparable riskiness.

High ROAs may translate into low risk-adjusted ROEs if they are derived from businesses whose riskiness is such that the bank must backstop them with inordinate amounts of shareholder money.

For example, banks whose principal activity is middle-market corporate lending may earn exceedingly high ROAs and net interest margins, at least for a while. But since the amount of equity required to sustain this business, given its vicissitudes, is generally quite large, the risk-adjusted ROE may be, and in most cases is, unacceptably low – often lower, in fact, than the return the shareholder can make in comparable-risk activities.

The reason, quite simply, is that the banks do not, or cannot, price high enough to cover the risks and therefore pay for the capital needed to support the middle-market lending business. Hence, despite temporarily high nominal returns, many middle-market lending banks limp along with quite depressed stock valuations.

Identifying the Independent

As banks increasingly appreciate the need to satisfy the requirements of a forward-looking marketplace interested in sustainable equity returns, they are analyzing each of their constituent businesses on an unbundled, or stand-alone, basis. The analytic process embraces three steps: first, determining what constitutes an independent business; second, assigning an appropriate market-determined hurdle rate of return on equity to the independent business; and third, determining the amount of capital that is economically necessary to support the business.

Each of these steps involves an intense amount of cogitation and practical judgment. For example, what is an independent business? In the retail area, is deposit-taking such a business? Or should a bank's deposit-taking activities be combined with other branch-related businesses for purposes of profitability analysis?

Vanward banks are now analyzing returns in each of their constituent businesses.

Once a bank identifies its truly independent businesses, it must determine an appropriate hurdle rate for each. According to modern financial theory, the acceptable hurdle rate is equal to the riskless T-bill rate plus a "beta" or premium for the business' individual riskiness times the excess return customarily demanded by the typical investor for being in risky stocks rather than riskless bills.

Two of the three components of this hurdle-rate formula are reasonably easy to assess – the bill rate and the excess return. The problem, of course, is to figure out the beta for the business in question.

The beta of a business is a measure of its earnings volatility relative to that of the general marketplace. In an article forthcoming in the winter issue of the *Journal of Retail Banking*, Price Waterhouse offers the following commonsensical advice on calculating betas.

"To choose a beta, you first collect information on actual betas from stand-alone institutions operating in similar businesses. (For example, the betas for independent mortgage banks typically range from 0.6 to 1.1.) For other businesses, proxies can be used. In the more broadly defined retail branch businesses, we have used a proxy of 0.5 to 0.9 derived from smaller regional banks that primarily focus on retail and small commercial lending.

"For other businesses, few beta proxies exist. In these cases we recommend that the bank first analyze the returns on equity for the business over a five- to 10-year period. The standard deviation of ROE (the square root of the variance from the mean) in the business can then be compared with the standard deviation of the overall bank ROE. For example, if the standard deviation of returns in a retail business is 1% and the standard deviation of the overall bank's returns is 2%, then the beta proxy for that business is 0.5."

If the beta for the business indeed amounted to only 0.5, then the required rate of return on shareholder's equity is readily calculable. If the T-bill rates averaged 7.5% over some meaningful period of time and the excess market return averaged 8%, then the minimum after-tax rate of return on the business amounts to 11.5%. This is low for most bank businesses, but then most business betas are higher than 0.5.

Creating the Capital Cushion

Of course, in order to compare the standard deviations of returns, as suggested by this method, one first has to establish bona-fide ROEs. The bank's overall ROE is known, but the ROE of a component business depends on the amount of its allocated or imputed capital. Hence, determining the beta and therefore the hurdle rate of return for a business in many cases presupposes an analysis of its economically needed capital cushion. For many lending businesses, the capital cushion is dictated, or at least heavily influenced, by the risk-based regulatory guidelines. (As this writer tried to demonstrate in his article of Sept. 25, banks should not slavishly follow the regulatory framework.)

But what about businesses not covered by the capital rules – e.g., fee-based or deposit-based businesses? The amount of capital required should of course be related to the worst-case scenario for potential losses, which would probably require the bank to allocate enough equity to cover two standard deviations from mean earnings performance, or 95.5% of the historic negative deviation from average profits.

On the assumption that maximum losses in most fee-based or deposit-based businesses are usually no greater than one year's operating expenses, Price Waterhouse recommends that banks earmark capital equal to this amount.

Projecting Cash Flows

Having identified those businesses that qualify as stand-alone entities, the appropriate hurdle rate of return on equity for each, and the amount of economically needed capital, a bank is prepared to undertake an analysis of value-creating or value-destroying properties.

The technique to be employed is discounted cash flow. The bank must project net cash flows – interest and noninterest revenues less match-funded interest expenses, noninterest expenses, loan losses, and taxes. It must also assign a terminal value to the business.

It must then discount the net cash flows and the terminal value to their present worth, using the aforementioned hurdle rate of return. If the amount of these net flows, appropriately discounted, exceeds the amount of the economically needed capital, the business is an acceptable contributor to shareholder value. It is earning more than the shareholder's cost of equity – the return that investors can expect from other businesses of similar riskiness.

If the discounted present worth falls short of the needed capital, the business is at best a candidate for restructuring and at worst a candidate for divestiture.

Difficult as the above analysis may appear, the best-managed banks have either already done it or are considering doing it. They simply have no alternative if they wish to remain viable competitors for investment capital. ☐

COMMENT / *By Anat Bird*

Regulation Isn't the Only Problem

It is becoming increasingly apparent that American banks are having difficulties maintaining their position as major international competitors.

There is no American bank among the top 10 banks in the world, and only one is in the top 25. Our international involvement resulted in a credit disaster – lesser-developed-country loans – and other failures at profitable entry into global financial markets.

Even our leading bank, Citibank, which unlike most of its peers has not backed away from its global presence and commitment, is experiencing difficulties.

The explanation often offered these days is the lack of regulatory parity between the United States and our primary competitors in the Group of Seven industrial countries and Switzerland.

We are told that our regulatory structure is much more restrictive and burdensome than that of our competitors, leaving U.S. banks at an unfair disadvantage.

Although this is to a great extent true, I believe there are many other important reasons for our inability to successfully compete in global markets.

Two questions are at hand:

- Is there regulatory disparity that has a material impact on our ability to compete?
- Are there other, equally important reasons why U.S. banks are not doing as well as they should globally?

Weighing the Burden

The weight of relative regulatory burden across countries can be examined by looking at legal reserve requirements, regulatory structure and reporting requirements, liquidity requirements, capital requirements, and deposit insurance/safety net. Other categories worth looking into are taxes, subsidized advances, scope of powers, compliance regulations, social programs, and litigation and legal costs.

The American Bankers Association has conducted analyses of these components. It appears that the American banking system exhibits significant disadvantages relative to other developed countries' systems.

Some restrictions are obvious. For example, the Glass-Steagall Act, which separates commercial and investment banking, is uniquely American. No such separation exists in the other countries evaluated.

Foreign Banks' Advantages

Further, banks outside the United States are permitted to

Data Sources: American Banker questionnaire to 700 mortgage companies and commercial banks in servicing for investors and the Thrift Financial Report submitted by S.A.I.F.-insured thrifts to the Office of Thrift Supervision. **ADP Data Services Division, New York,** provided the thrift data. (See table below for a discussion of the changes in thrift regulatory reporting.) **Description of Table:** A listing of the top 25 firms in the mortgage industry. The listing includes mortgage companies, commercial banks, and thrifts. For firms with more than one subsidiary engaged in servicing mortgages for others, a combined servicing figure for all of these subsidiaries is used, and the name of the parent company is shown in bold type. **(a)**— Consolidated data for the corporation's two mortgage company subsidiaries: (1) Fleet Real Estate Funding Corp., Florence, S.C and (2) Fleet Mortgage Corp., Milwaukee. The former now services the mortgage portfolios for the holding company's subsidiary banks. **(b)**— Excludes the $7.5 billion master servicing portfolio acquired from Residential Funding Corp., on March 6, 1990. **(c)**— The 1990 data are consolidated to include servicing done by the the thrift and its two mortgage company subsidiaries: (1) America's Mortgage Corp., Springfield, Ill. and (2) America's Mortgage Servicing, Inc., Lisle, Ill. The 1989 data are not consolidated. **(d)**— The data are for: (1) Chase Home Mortgage Corp., Tampa, Fla.; (2) Chase Lincoln First Bank NA, Rochester, N.Y.; and (3) Chase Bank of Arizona, Scottsdale. The 1989 data included the San Juan Puerto Rico branch of Chase Manhattan Bank NA, New York. **(e)**— The June 1989 data are for Marine Midland Bank NA. All servicing was transferred to the mortgage company. **(f)**— The company's parent has announced that it has reached an agreement in principal to sell the mortgage company to General Electric Mortgage Capital Corp. **(g)**— Data for both 1989 and 1990 are consolidated. **(h)**— The 1990 data are for: (1) First Interstate Mortgage Co., Pasadena, Calif.; (2) First Interstate Bank of Oregon NA, Portland; (3) First Interstate Bank of Washington NA, Seattle; and (4) First Interstate Bank of Casper NA, Wyo. The 1989 data were for the mortgage company and the banks in Oregon, Arizona and Nevada. The loans serviced by the Nevada bank are now subserviced by the mortgage co. **(i)**— In RTC (Resolution Trust Corp.) conservatorship program at midyear. The 1990 data are consolidated data for the thrift and its mortgage subsidiary, BancPlus Mortgage Corp., Pasadena, Tex. The 1989 data were for BancPlus Mortgage only. **(j)**— In RTC conservatorship program at midyear. **(k)**— In RTC conservatorship program at midyear. The 1990 data are consolidated data for the thrift and its mortgage subsidiary, Commonwealth Mortgage Corp. of America. The 1989 data were for Commonwealth Mortgage Corp. only. **(l)**— The data are for: (1) Sears Mortgage Corp., Riverwoods, Ill. Last year, it also included a former subsidiary, Coldwell Banker Real Estate Financial Services, El Segundo, Calif. **(1)**— Consolidated. **(2)**— Not consolidated. **(3)**— Total is for the top 25 firms on June 30, 1989. **(‡)**— Revised since publication on Oct. 23, 1989.

Data Source: Data provided by **ADP Data Services Division, New York**, from its data base of the Thrift Financial Report submitted by S.A.I.F.-insured thrifts to the Office of Thrift Supervision. **Mortgage Loans Serviced for Others** are the total of all unpaid principal balances of all whole loans and participating interests in loans serviced by an institution but owned by others at the close of the period, whether or not originated by the institution. The 1990 data are **consolidated** for the thrift and its nonfinance and finance subsidiaries. Therefore, thrifts that own mortgage companies are included here. **(†)**— The Thrift Financial Report was changed substantially this year. Basically, the data for 1990 are consolidated to include all subsidiaries and the 1989 data are not. Therefore, the 1990 data may not be comparable to the 1989 data for some institutions. **Loan Servicing Fees** are the fees earned— as a result of the servicing for others of loans or participations therein— during the 12-month periods ending on June 30, 1990, and June 30, 1989, respectively. The 12-month servicing fees are calculated by summing the fees earned in each of the four quarters of the period. **N.A.**— Not available. **(‡)**— The 1989 totals are for the top 50 thrifts in servicing in 1989. **(1)**— Consolidated. **(2)**— Unconsolidated. **(3)**— Consolidated for all 2,452 private sector SAIF-insured thrifts. **(4)**— Unconsolidated data for all thrifts— private and RTC-controlled. **(§)**— Data are from the Office of Thrift Supervision. **(★)**— In Resolution Trust Corp. conservatorship program at midyear. **(‡)**— Revised since publication on Oct. 23, 1989.

Mortgage-Servicing Leaders Surge Ahead

Continued from *page* **1**

begin on page 18.

Some megaservicers, such as second-ranked Fleet/Norstar Financial Group Inc. and seventh-ranked Chase Manhattan Corp., increased their portfolios by more than 30% in the 12 months. The mortgage unit of Marine Midland Banks Inc., ranked No. 14, pumped up its portfolio by nearly 90%.

Servicing – the backbone of home mortgage operations at many banks and thrifts – entails funneling monthly payments from borrowers to mortgage investors. Servicers, which earn fees, also handle property tax and insurance payments for borrowers and initiate foreclosure proceedings.

Sources of Rights

Some servicers, such as top-ranked Citicorp Mortgage Inc., obtain their servicing rights primarily through retail mortgage originations; Citicorp sells the loans and keeps the rights. Fleet/Norstar, in contrast, relies heavily on purchases of loans from correspondent originators.

> **Already, some servicers are rumored to be suffering from deteriorating credit quality.**

In addition, servicers can buy bulk packages of rights already separated from loans. Though this segment of the market has been hit hard in the wake of the thrift-bailout law, there are signs that it is regaining some strength.

Growth Expected to Slow

Several servicing executives said they expect their portfolio growth to moderate over the next year or so as the economy's slowdown restricts mortgage production. But the growth targets of these executives are hardly timid.

"To maintain a 90% growth rate would be unrealistic," said Charles W. Sewright, chief executive of Marine Midland Mortgage Corp. However, he said, his $13.5 billion portfolio is still likely to grow 10% to 20% in the next year.

Marine Cuts Back

He added that Marine began to intentionally curb servicing purchases earlier this year both to ensure quality service for customers and to await final action on proposed capital rules for purchased rights.

As with other areas of banking, credit quality issues loom over servicing. A slowing economy can reduce the ability of borrowers to make timely payments, and falling home prices – common in more and more markets – can reduce borrowers' incentives to repay their mortgages.

Though servicers often are not responsible for losses on loan principal, delinquencies and foreclosure still produce substantial expenses.

For example, servicers typically are required to forward monthly payments to investors even if borrowers have not paid on time.

Credit Problems

Already, some servicers are rumored to be suffering from deteriorating credit quality. But delinquencies for the industry as a whole have risen only slightly.

According to a survey by the Mortgage Bankers Association of America, 4.52% of home mortgages were at least 30 days past due in the second quarter. The rate exceeds the first quarter's 4.41% but is still low by 1980s standards; delinquencies peaked in 1985 at 6.07%.

Apparently to head off problems, many servicers are redoubling collection efforts.

"People are investing far more heavily in collections than we've seen in past years," said Linda C. Simmons, a principal in KPMG Peat Marwick, which does an annual study of large servicers.

For example, she said, seven of the 11 big servicers studied in 1989 installed "power dialing" phone systems during the year. Such systems allow servicers to contact delinquent borrowers methodically and rapidly. As soon as a collections employee completes a call, the system automatically dials the next borrower.

Servicers are also taking steps to monitor more closely the performance of their collections department, Ms. Simmons said.

Looking on the Bright Side

But few executives view the gathering economic clouds as reason to intentionally curb portfolio growth.

"We don't really try to slow the machine down during periods like this," said Andrew Woodward, president of Fleet-/Norstar's mortgage banking division. "We do try to monitor our markets very carefully and adjust where we need to."

Fleet Soaring

Fleet/Norstar's combined portfolios, which stood at $45.9 billion at midyear, have since passed the $50 billion mark and should approach $60 billion by the end of 1991, Mr. Woodward

And now for the good news.

Difficult times do more than strengthen the spirit. They also provide opportunities for those able to look at their business with a new perspective. And no one helps you identify these opportunities like Hamilton, Carter, Smith.

Our expertise includes Loan Servicing Brokerage, Portfolio/Corporate Evaluations, Data Base Services, Mortgage Consulting, and Mergers and Acquisitions.

Plus, our unique technical ability enables us to customize our service to meet your individual needs. In fact, the U.S. government turned to us as advisers when faced with the critical S&L situation.

So remember in times like these, turn to Hamilton, Carter, Smith, the leader in identifying value in a challenging and constantly evolving marketplace.

Let us share our unique perspective and help you attain the growth, efficiency and profitability you're looking for.

Now, isn't it nice to hear some good news for a change?

HAMILTON, CARTER, SMITH & CO.

Data Source: American Banker questionnaire to the top 450 mortgage companies in mortgage servicing. **Description of table:** A ranking based on mortgages serviced for investors on June 30, 1990. The table identifies the 300 largest mortgage companies responding to the survey. **Dollar Volume of Mortgages Serviced:** permanent commercial and residential real estate mortgages serviced for investors. Excludes mortgages owned by the institution, as well as forward commitments, home improvement loans and all temporary financing, such as construction and development loans. **Number of Mortgages Serviced**: are the number of loans associated with the volume reported. **Number of Investors Excluding Pools:** includes depository institutions such as thrifts and banks, pension funds, insurance companies, etc. **Number of Pools:** The sum of GNMA pools, FNMA pools, and FHLMC pools.

(a)— Excludes $7.5 billion master servicing portfolio acquired from Residential Funding Corp. on March 6. **(b)**— Includes mortgages serviced for the bank subsidiaries of its holding company, Fleet/Norstar Financial Group, Inc., Providence, R.I. **(c)**— In 1989, servicing was performed by Marine Midland Bank NA. All servicing was transferred to the mortgage company. **N.A.**— Not available. **Compiled by American Banker, Copyright 1990.**

Signs of Life Appearing in Secondary Market for Rights

By PHIL ROOSEVELT

NEW YORK — The secondary market for mortgage servicing rights, hammered by the thrift-bailout effort, may be regaining some strength.

A key indicator of trading volume showed a sharp rise in each of the past two months. And some buyers that have been standing back from the market are now giving it another look.

Citicorp Mortgage Inc., the nation's largest servicer, says its is buying bulk packages of rights from other lenders for the first time in about 18 months.

"We think prices have adjusted, and it's a reasonable time to be a buyer," Kim Rosenberg, vice chairman of the Citicorp unit, said in an interview.

For the past year of so, the market has been weakened by an expected torrent of sales by the Resolution Trust Corp. and capital-short thrifts. At the same time, a number of potential buyers moved to the sidelines.

Some have been concerned about pending restrictions on purchased servicing as a component of capital, while others have simply been awaiting further price declines.

Servicing, which historically has sold for about 2% of the related loan amount, has dropped to about 1.5% or lower, many experts say. And earlier this year, trading volume slowed to a trickle.

But sales of servicing rights on loans backing Government National Mortgage Association securities have picked up sharply. Such sales – widely used as a proxy for the broader market – affected more than $4 billion of loans in both August and September, up from less than $1 billion in April.

"Supply and demand are still significantly out of balance, but we're now seeing a stabilization of prices," said David Sambol, president of Countrywide Servicing Exchange, Pasadena, Calif. "I think we've hit bottom."

Citicorp, which was publicly bearish on the secondary market earlier this year, recently signed a letter of intent to buy one package and is now on the prowl for more, Mr. Rosenberg said. He declined to describe the first deal in any detail.

"A good number of others are getting back into the market, along with new entrants," said Mr. Sambol.

All the same, some experts say the market still has a long way to go before it is fully back on its feet.

Hunter Wolcott, president of Reserve Financial Management, Miami, said that action on the proposed capital rule is needed before strong buying can resume. That action is expected by yearend.

"The regulatory uncertainty is still chilling the market," he said. □

said.

That would put Fleet/Norstar near the $63.7 billion serviced by Citicorp Mortgage in the middle of this year.

But the Citicorp unit – the hub of the banking giant's mortgage operations – is not exactly standing still.

Full Speed Ahead

Despite the weakening economy, Citicorp is "absolutely not" slowing down its originations, said Kim Rosenberg, vice chairman of Citicorp Mortgage. "What we have done, as always, is respond to specific geographic conditions and revise our credit parameters accordingly."

Even with such steps, Citicorp's home loan originations are running at "about the same" level as last year, Mr. Rosenberg said. That was put at $13.7 billion by SMR Research, Budd Lake, N.J. □

Florida Banker Faces Removal

TALLAHASSEE, Fla. — Florida Comptroller Gerald Lewis has taken legal action to remove Roy Talmo from the board of two financial institutions and bar him from ever again serving in any state-chartered bank, thrift, or credit union.

Mr. Talmo, who was chairman of First American Bank and Trust of North Palm Beach until shortly before it was seized by state regulators last December, allegedly engaged in "unsafe and unsound" banking practices and "hazardous lending and lax collection practices," maintained an "excessive volume of poor quality loans," and operated with inadequate capital and "excessive interest-rate exposure."

Mr. Lewis said that Mr. Talmo is also a board member of First American Bank of Charlotte County and First American Bank of Indian River County and has a financial interest in First Marine Bank of Florida.

The banker has 21 days to challenge the removal and prohibition order or face the automatic imposition of the sanctions. □

Satisfied Customers.

The Principal Reason
Fireman's Fund
Is Moving Forward.

In fact, we now have 557,359 Satisfied Customers, an impressive 9 percent increase from 512,314 at the end of 1989.

Our servicing portfolio increased as well, moving us from $29.7 billion on December 31, 1989, to $33.8 billion on June 30, 1990. That's a 14 percent increase in just six months.

Our goal for 1990 is to grow our servicing portfolio even more. We are on target and we expect to get even stronger.

Our customers tell us they're very happy.

Our investors tell us they continue to enjoy substantial rewards, thanks to our constant attention to detail.

Our Wholesale and Retail Divisions continue to provide quality originations and unparalleled service.

Our people keep doing a better job.

All these factors have helped us to grow to one of the largest mortgage bankers in the country.

If you're interested in dealing with a mortgage banker dedicated to helping customers, we'd be privileged to have you as our next satisfied customer.

For additional information, please call Gene Lavigne, Vice President, at Fireman's Fund Mortgage Corporation, 1-313-488-7000.

Leverage Rules Worry Banks on Global Standing

By KELLEY HOLLAND

The new minimum leverage requirements for banks will take effect in less than three months with many concerns still swirling about them.

Some bankers say the new requirements are stiffer than those imposed on foreign banks. The result, say the critics, is that the rules will force U.S. banks to maintain higher capital ratios than their competitors overseas.

A second concern is that the new leverage requirements, rather than creating a level playing field, give regulators discretionary authority over banks' capital management.

ANALYSIS: *Follow-up on the news*

"The minimum leverage ratio will become the subjective thing the regulators use as their policy tool," said one investment banker.

These worries arise as Federal Reserve Board Chairman Alan Greenspan has raised the possibility of still another set of capital requirements. When risk-based capital requirements are factored in, it's little wonder that bankers are puzzled. Indeed, in some cases, the information to make reasonable judgments isn't yet available.

3 Agencies' Agreement

The newest regulations resulted from an agreement last month by officials of the Federal Reserve Bank, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corp. on a minimum leverage ratio to be required of all banks – and, implicitly, of all thrifts.

As of the end of 1990, banks must to have a specified leverage ratio – a percentage of Tier 1 capital, mostly common-stock equity – relative to their assets.

Top-quality banks, those with a "1" Camel rating (capital, assets, management, earnings, and liquidity), will be required to maintain a leverage ratio of 3%. Banks with lower Camel ratings must maintain higher ratios.

4% Effective Minimums

In effect, most banks will have minimum leverage requirements of at least 4%, industry observers said.

The leverage requirement sets a floor for U.S. banks' capital levels.

Under risk-based rules, a bank could actually have no capital at all, provided its assets were entirely composed of U.S. Treasury securities. But under minimum leverage requirements, even that bank would have to

PNC, CoreStates, Mellon Boost Loss Provisions

By TOM LEANDER

PNC Financial Corp. on Tuesday announced that third-quarter profits fell 56%, to $56 million, as weakness in its commercial loan portfolio spurred a $147 million provision for possible loan losses.

Two other big Pennsylvania banks, Mellon Bank Corp. and CoreStates Financial Corp., posted flat earnings of $66 million and $62 million, respectively, after taking hefty provisions against real estate loan losses.

"The downturn in Northeast banking came into full bloom in third quarter in Pennsylvania," said Dennis Shea, an analyst for Morgan Stanley & Co. in New York.

Meanwhile, Wells Fargo & Co. and Banc One Corp. managed to post increased earnings. Wells Fargo's net income rose 7%, to $162.6 million, while profits at Banc One jumped 19%, to $109.1 million.

In its first quarterly report as a combined company, C&S/Sovran Corp. reported earnings of $30.2 million, down 76% from the $126.9 million the company would have earned a year ago

Citicorp, Hanover Profits Far Short of Expectations

By JED HOROWITZ

NEW YORK — Citicorp and Manufacturers Hanover Corp. on Tuesday reported third-quarter earnings that were well below expectations after heavy additions to loan-loss reserves.

Citicorp said its profits fell 38% to $221 million, or 56 cents a share, from the level in last year's third quarter and 10% below the lackluster $248 million reported in this year's second quarter. Analysts had expected the nation's largest bank to earn 74 cents a share in the latest quarter.

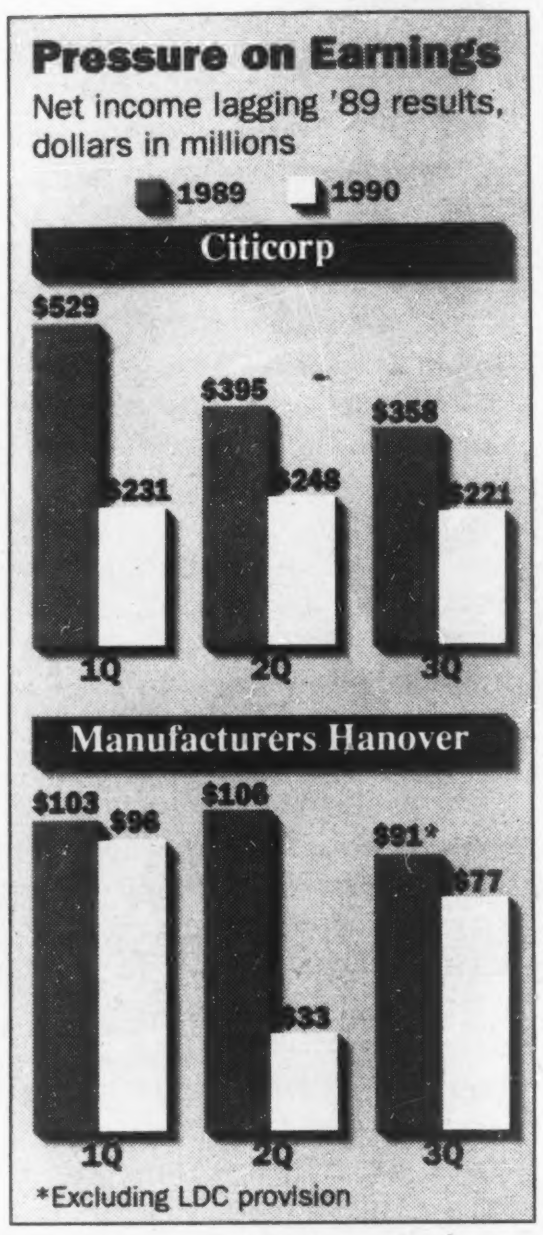
Manufacturers Hanover Corp. said it earned $77 million, or 89 cents a share, in contrast to a $789 million loss in the year-ago quarter.

Analysts had expected the nation's eighth-largest banking company to earn about $1.22 a share.

Revenues Worrisome

Citicorp's apparent inability to generate strong revenues weighed more heavily on investors' minds after yesterday's report than the sluggish earnings.

The company topped the list of most active stocks on the New York Stock Exchange, closing at $12.875, down $1.25 a share.



*Excluding LDC provision

Citicorp did not cut its annual dividend rate of $1.78 a share. Though the company's stock price is now yielding more than 13%, the company is earning

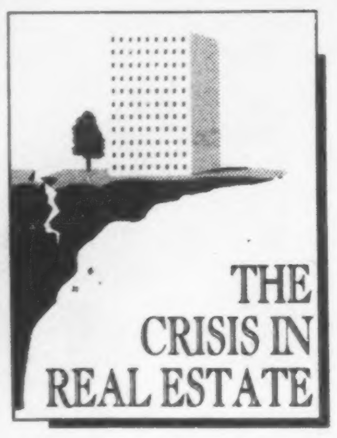
Strong Builders Still Getting Bank Credits – on Tougher Terms

By SAM ZUCKERMAN

SAN FRANCISCO — Even during a famine, some always manage to get enough to eat. Likewise, in the midst of a real estate credit crunch, some builders can still get financing for new projects.



THE CRISIS IN REAL ESTATE

Take the Hahn Co., a San Diego-based shopping mall developer.

In July, the Bank of California and its parent company, Mitsubishi Trust & Banking Corp., announced a $170 million loan to Hahn and its partner, Santa Anita Realty Enterprises, for a major expansion of Towson Town Center, a regional retail complex near Baltimore.

San Francisco-based Bank of California was not the only lender willing to provide financing. Both Citicorp and Canadian Imperial Bank of Commerce were interested in the project,

Other Industries Pirating Banks' Tech Employees

By KAREN GULLO

NEW YORK — When a large telecommunications concern moved its operations center to Kansas City a couple of years ago, it lured technology employees away from area banks by offering higher salaries.

The company hired programmers and support staff for on-line transaction processing computers – the type of systems that had been used by its banking counterparts for years.

"We became an attractive, steady source of employees for them," said a personnel administrator at Commerce Bancshares Inc., one of the banks that readily acknowledges it was raided.

Widespread Problem

Such scenes are becoming common across the country. Bankers and recruiters complain that it is harder to find and keep talented programmers and managers for on-line and other computer systems – especially in small and medium-size cities.

Technical people have always been in short supply, they con-

COMMENT / *By Kenneth H. Thomas*

RTC Can Greatly Improve Accelerated Resolution Plan

The Resolution Trust Corp.'s pilot Accelerated Resolution Program, which seeks to expedite sales of troubled thrifts by avoiding government conservatorships, is likely to be a success because some of the thrifts involved were presold prior to the program.

But even if the ARP meets its stated goal of resolving the 10 problem thrifts in the program by November, the experiment indicates the need for the RTC to restructure its franchise sales efforts by opening them up to a broader and more competitive arena. This can best be done by allowing investment bankers and other private sector branch sales specialists to market franchises.

The basic concept of the ARP is a sound one, but the program can be improved. This is particularly important now with the increasing number of quasi conservatorships where greatly troubled thrifts that in the past might have been seized by the government, are being operated by government-approved management.

ARP Objective

The ARP was approved as a three-month pilot program for 10 thrifts by the RTC board on July 10, 1990. It is a joint program with the Office of Thrift Supervision, and both agencies are involved in the selection of participants for it and the management and evaluation of the program.

The purpose of the ARP is to lower the costs of resolving selected troubled thrifts by accelerating their marketing and sale to avoid RTC conservatorship. One rationale cited by the RTC is that such an expedited resolution reduces the loss of substantial franchise value, which their research has shown can be as high as 20%.

The Basic Concept

The ARP is quite similar to the straightforward approach used by the FDIC in dealing with troubled banks, namely an expeditious involvement and resolution. Preference in the ARP will be given to whole bank bids over clean bank ones. There will be no yield or loss coverage in the ARP, and any assistance will be of a closed bank versus open bank type. That is, any assistance must be accompanied by a non-RTC capital infusion that first brings the thrift into capital compliance.

The basic concept of the ARP is a common sense one: why incur the direct and indirect costs of government conservatorship when the subject thrift has acceptable management and stable operations? Regulators will clearly be looking over management's shoulder in most areas anyway, as the subject thrift is likely operating under various formal or informal regulatory agreements.

Managers at these troubled thrifts in effect are approved as indirect agents of the regulators rather than direct conservatorship managing agents. In fact, a number of thrifts today are being operated in this way as quasi conservatorships in which the government is making the major decisions, rather than caretaker managers.

This approach is less costly and disruptive than outside management consignment operations or the repopulating of the board and/or senior management with government-appointed public interest representatives. In addition to direct cost savings, the RTC is not burdened with new conservatorships that could be interpreted as signaling a worsening of the thrift crisis.

Eligible ARP participants are those that are in danger of failing and likely to be placed into RTC conservatorship within one year. ARP thrifts, however, must have an "acceptable management structure, stable operations, and franchise value" as determined by the OTS.

Approximately 60% to 70% of the nearly 250 institutions as of June 30, 1990, which will probably need federal assistance (i.e., Group IV thrifts) may be eligible for ARP. Thus, about 160 thrifts representing roughly $100 billion in assets may be affected. Ineligible thrifts will be processed under the RTC's conservatorship procedures.

A particularly noteworthy eli-

COMMENT / *By Warren W. Traiger*

Advertising CRA Programs Can Build Public Support

Banking is in desperate need of a public pick-me-up. Unending bad news about the savings and loan debacle and the ubiquitous warnings about the health of commercial banks and their insurer have resulted in a serious image problem for the industry.

Unfortunately, to a great extent the perception matches the reality. U.S. banks were once preeminent among world financial institutions, but now only two of them rank among the world's top 50. Profitability has diminished, and the major credit rating agencies have generally downgraded the debt of banks. The value of bank stocks has plummeted.

Given the importance of reversing these trends, public opinion about banking is of more than passing interest. Congress will soon be considering proposals for fundamental deposit insurance reform, and banks are hopeful that this will provide a context in which new products and services can also be considered. The outcome of this debate will significantly affect the future direction of American banking.

Sounding Out the Public

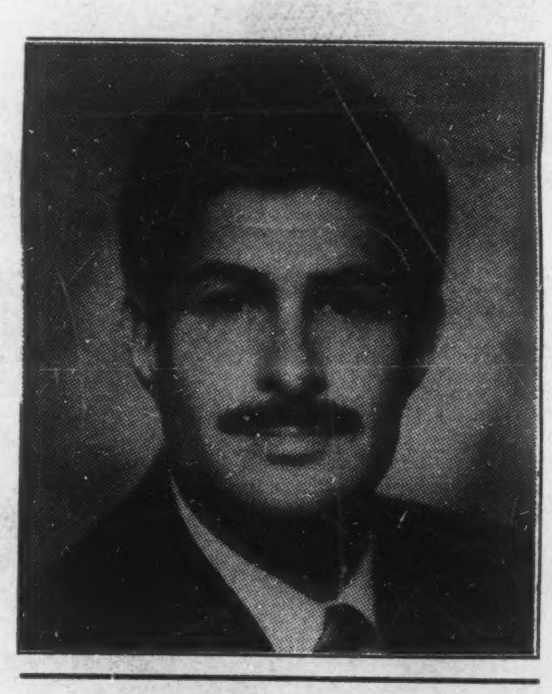
With these deliberations sure to receive considerable attention, Congress will want to make certain that the electorate is comfortable with product and service diversification. Public support will not be forthcoming unless the industry can overcome the notion that because deregulation contributed to the insolvency of the Federal Savings and Loan Insurance Corp., it would similarly threaten the Federal Deposit Insurance Corp.

It is beside the point that most industry experts and regulators do not draw this parallel or that Fed Chairman Alan Greenspan views the ability to engage in new securities activities, accompanied by appropriate safeguards, as essential to the future of American banking. The perception that deregulation will undermine commercial banks will not be overcome solely by expert opinion.

The challenge for banking will be to garner public support for new powers by removing itself from the long shadow of the FSLIC. Banks need to earn the public trust to lend credence to their argument for new powers. This will not be easy for an industry that has never been the people's choice and seems naturally wary of self-promotion.

The Good News

Banks, however, have an unprecedented opportunity to enhance their image by trumpeting their compliance with the recently strengthened Community Reinvestment Act. While most regulatory issues generate public interest only when someone alleges noncompliance, the CRA is different.



"The CRA is 'sexy,' a term not generally associated with regulatory issues."

Its mandate that banks ascertain and serve the credit needs of their communities, especially those of less affluent residents, has generated considerable attention because of its potential for addressing certain social ills.

The CRA is "sexy," a term not generally associated with regulatory issues. The media seem primed to follow up with stories of the law's success or failure, and the industry is uniquely positioned to turn this situation to its advantage.

Whether because of altruism, fear of negative publicity, or the threat of denial of regulatory applications due to poor performance, banks are paying careful attention to CRA compliance. Many institutions are being creative and generous in their quest for positive evaluations. They now need to make their activities known.

Active and widespread promotion of CRA activities can be an invaluable part of banking's efforts to win public support for product expansion. Americans will be more likely to heed the arguments of an industry they know is actively engaged in serving the credit needs of low- and moderate-income neighborhoods.

This promotion will be most effective if done at the grassroots level, that is, by individual institutions through their local media. National advertising does not have the same immediacy or relevance as reports about projects undertaken on a familiar street by a neighborhood institution.

CRA projects will often generate hard news, but banks should also consider paid advertisements that tout these activities. Indeed, federal regulations specifically authorize the advertising and marketing of CRA evaluations and ratings.

Failure to promote CRA activities could cause the media and public to focus on those few institutions that regulators call on the carpet for failing to adequately serve their communities or focus on those that comply only in response to a protest. An unfortunate result like this would further damage the industry's public standing.

Heavy Burden of Proof

Americans no doubt support the notion that it is in the national interest for domestic banks to be profitable and competitive. Yet even the best scholarly demonstrations that new products and services will help accomplish this goal are unlikely to outweigh the perceived lessons of the FSLIC.

Commercial banking has an extraordinary opportunity to add a human dimension to its contention about the importance of deregulation. ☐

Tech Employees Pirated Away

Continued from *page* **1**

cede, but the problem has gotten worse in the past two years as more nonbank companies adopted on-line computers. That is driving up pay the pay for a small, specialized group of programmers, the experts say.

The exodus reduces productivity in technology operations, bankers say. Key programming positions are hard to fill and remain open for weeks or months.

Promoting from Within

Many banks are responding by promoting from within, but training can be time-consuming.

"It's a very tough thing to manage," said Robert J. Buskas, executive vice present and cashier at American National Bank and Trust Co., Chicago. "It's not only the specialists in on-line systems that are scarce, but specialists for installing operating systems on the mainframe, maintaining networks that connecting mainframes, and personal computer maintenance staff."

Many bankers fear the problem will get worse. "Workforce 2000," a report compiled for the Labor Department by the Hudson Institute, warns that the U.S. work force will grow more slowly in the 1990s than at any time since the 1930s. A shortage in technically skilled workers is predicted.

Education System Faulted

Mr. Buskas said that at a recent meeting of an American Bankers Association panel, bankers from all over the country expressed concern over the shortage. The panel, the executive committee of the ABA operations and automation division, will address the subject at a planning meeting in Washington next month.

"They're worried that the educational system is not producing people with the skills sets for technical jobs," said Mr. Buskas, designated chairman of the committee.

"Bankers are saying, "If my operation grows the way I think it will, where am I going to get the people to staff it?' "

Many banks, especially outside big urban centers, say they can't keep up with rising salaries for computer programmers during these lean times for banking.

"The banks can't afford to keep their people," said one Midwest-based recruiter who places people trained on Tandem computers, popular in the banking industry. "Private industry can wipe them out."

Where Problem Is Worst

Banks in theeSouth, Midwest, and West report the most trouble. Even new technology employees are hard to keep. Many banks report defections to telecommunications, airline, and manufacturing companies, where pay and perks are often better.

The problem is less acute for money-center banks in areas like New York and Los Angeles. These areas generally have a large pool of technically skilled workers, and large banks known as technology leaders typically find it easier to attract staff.

Comparative Pay

Salaries for technical people in banks have traditionally been on par with or above other industries' standards.

Bank technology chiefs are among the highest-paid technology executives in any industry. And average salaries for most systems and programming staff are slightly higher in the banking industry than in other industries, according to a survey by *Computerworld*, a trade journal.

But salaries for programmers and senior and middle-level members of the technical staff are actually declining at banks, according to the *Computerworld* survey. The average declined in 1990 for senior programmers, senior operating systems managers, program managers, and data center managers at banks, the survey found. Lean times in the industry could keep such pay flat in the near term.

Money Is the Lure

Bankers, especially in smaller cities, say staff is being lured away by big bucks. One officer at a midsize Midwest bank said that over the past two years it has lost two to three staff members every six months. Some went to work for a telecommunications company with a large on-line computer operation.

"Money was the issue," said the banker, who spoke on the condition he not be identified.

Average Salaries Dip for Certain Bank Jobs

Job title	1990 salary	1989 salary	Percent decrease
Technical services manager	$57,955	$60,941	4.9%
Program manager	50,594	53,425	5.3
Senior operating system programmer	47,552	49,783	4.5
Senior data center manager	45,100	47,359	4.8
Data base analyst	44,231	47,600	7.1
Senior programmer	33,342	38,289	12.9

Source: Computerworld annual salary survey

"They got a 25% pay raise from another company, and we wouldn't match it."

To cope with the exodus, the bank says, it is raising salaries selectively and promoting from within to fill vacancies.

Fighting Back

American National, which employs 25 people for programming and support, lost its senior technical manager as well as several other programmers to an airline company two years ago.

"The pay and the travel benefits you can get from the airlines is something you can't find in the banking industry," Mr. Buskas said. The bank promoted another employee to the post, but Mr. Buskas noted that training takes 18 months to two years.

In attempts to retain staff, the bank has raised programmer salaries 7% in the past two years and upgraded some technology positions to officer status, Mr. Buskas said. This and the uncertain economy seem to have halted the rapid turnover, he said.

Commerce Bancshares also says it is aggressively hiring people from within. A few years ago, the bank added flextime schedules to compete with other big employers in Kansas City.

The Outsourcing Alternative

Other banks are turning to outsourcing, in which a vendor manages computer operations – and inherits the hiring problem.

Recruiting problems were one reason First City Bancorp. of Texas, Houston, signed an outsourcing contract with EDS Corp. in 1988, said J.W. Pieper, senior vice president of operations at First City Bancorp. "Hiring is EDS' problem," he said. "They're a big company and can attract and retain people better than a bank can."

Moving Out of Town

A few institutions are moving some operations to cities where the cost of living is lower. Security Pacific Corp. has shifted some systems development to Seattle from Los Angeles.

But bankers say their recruiting problems are not going to go away. Amid talk of a recession, they think things may get worse before they get better.

"The worse the economy gets, the harder it is to find people," said Mr. Pieper of First City. □

Banc One to License EDI Software For Clients from General Electric

By MATT BARTHEL

In an effort to streamline electronic data interchange for its corporate customers, Banc One Corp. has agreed to license software from GE Information Systems.

Electronic data interchange allows companies to exchange invoices and reams of accompanying information electronically. A few companies are beginning to expand EDI to include payments, and many bankers view it as the hot banking product of the 1990s.

The GE software, known as BPS Central, will allow Banc One to easily place EDI payment processing information into any of six Automated Clearing House payment formats. Under the banking company's old system, those formats were often handled on a case-by-case basis.

Formatting Is Automated

"In the past, we had to do much of our formatting manually, which was costly and time-consuming," said John Russell, director of corporate communications at Columbus, Ohio-based Banc One. "With this automation, we can format more quickly, and do it at a lower cost."

Under the recently announced agreement, Banc One will also act as a referral agent for GE's EDI software and services. By acting as a go-between for GE and corporate customers, Banc One can offer clients a full range of EDI services.

Such customer service is considered crucial in satisfying the needs of Banc One's middle-market clients.

Such customer service is considered crucial in satisfying middle-market clients.

"The corporate customers of banks are almost demanding the complete cycle of services related to EDI," said Mary Burchette, product marketing manager at GE Information Services. "The banks have to give their customers what they want or risk losing their business." □

Housing Agency Trying to Prove It Can Say 'No'

By DEBRA COPE

The Department of Housing and Urban Development is out to prove that it can be a safety and soundness regulator for the secondary mortgage market.

Better late than never. Although it has intensified its scrutiny over the past year, senior HUD officials admit the agency's track record has been one of weak oversight, not vigilant supervision.

Now, as the Treasury Department presses to centralize safety and soundness regulation of all government-sponsored enterprises in a single body, HUD is trying to shed its image as the agency that couldn't say no.

ANALYSIS
Follow-up on the news

The agency is hastening to put some muscle behind its pledge to strengthen regulation of the secondary mortgage market. In recent weeks, HUD has assembled a team of executives to oversee its financial regulatory responsibilities and announced plans to initiate banklike examinations of the Federal National Mortgage Association and the Federal Home Loan Mortgage Corp.

Fannie Mae's Plan Vetoed

But HUD executed its boldest stroke Oct. 12, when it vetoed a proposal by the Federal National Mortgage Association to help thrifts and banks squeeze cash from below-market mortgage portfolios.

"To my knowledge, this is the first time they've turned anyone down on safety and soundness grounds," said Thomas H. Stanton, a proponent of tougher secondary market regulation and a partner with Olwine, Connelly, Chase, O'Donnell & Weyher in Washington.

Fannie Mae's plan to make loans on the security of mortgages was too broad, too risky, and could have increased the company's need for capital, HUD said in denying the proposal.

Under the proposal, thrifts, banks, insurance companies, and other portfolio lenders could liquify their below-market-rate mortgages by issuing debt to Fannie Mae. The debt instruments would be backed by an over-collateralized pool of these mortgages. By structuring the transaction as a financing, the financial institutions would avoid recognition of losses that would occur if they sold the loans outright.

"For banks and thrifts, this is a very valuable program, because it is an opportunity to ar-

California Bank Rates Poorest on CRA Lending

SAM ZUCKERMAN

SAN FRANCISCO — Farmers and Merchants Bank of Long Beach, Calif., has received the lowest possible community reinvestment rating, apparently the first given to a U.S. financial institution since a public disclosure rule took effect July 1.

The Federal Reserve Bank of San Francisco rated Farmers in "substantial noncompliance" after an examination in August, officials confirmed. Federal regulators said they believed no other bank or thrift has received the lowest rating since the disclosure rule took effect.

Farmers and Merchants was formally notified of its CRA grade earlier this month. The bank has 30 business days before it must make its CRA rating public.

'Technicalities' Blamed

"We think they're completely wrong," Farmers and Merchants president Kenneth G. Walker said of the rating. "They have come down on us on technicalities. We constantly do what we can to accommodate the citizens of the community."

He added that the bank considers strength and stability as the most important things it can offer the community it serves.

Bank of New England Loses $123 Million

By TOM LEANDER

Bank of New England Corp.'s already razor-thin equity capital ratio fell further at the end of the third quarter after the Boston-based company posted a $123 million loss.

The loss stemmed from a $100 million provision for bad loans and an operating loss of $48 million.

The results reduced Bank of New England's ratio of equity to assets to 1.1%, from 1.64% at the end of the second quarter.

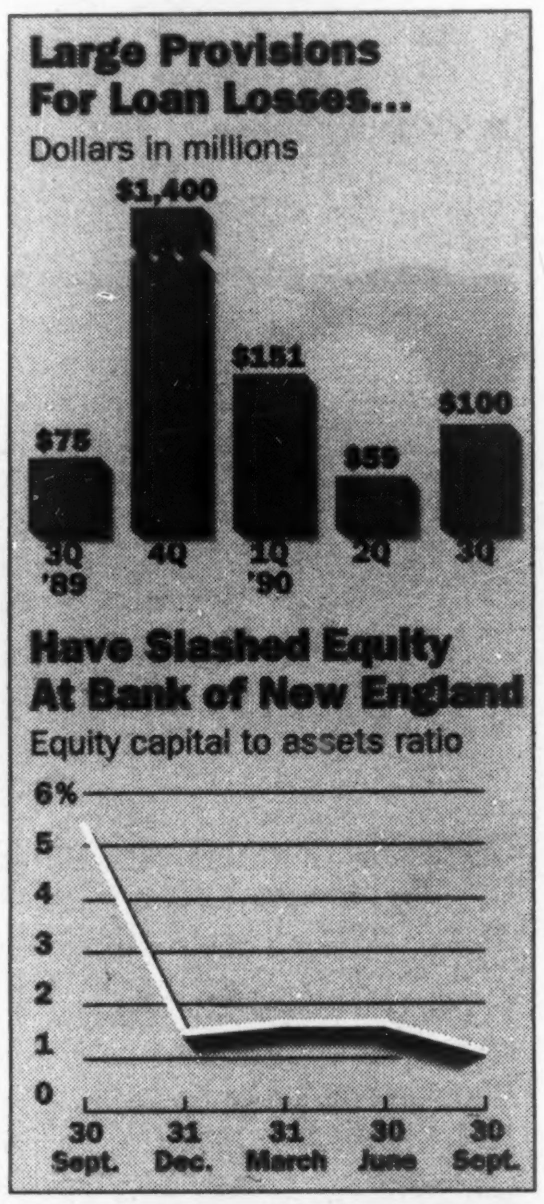
Under a cease-and-desist order, the banking company was required to have a 3% ratio by June 30, but regulators have not yet penalized the bank for failing to comply.

Speculation on Intervention

The third-quarter loss, announced Friday, renewed speculation that some form of federal assistance or intervention would soon be required.

"For all all practical purposes, BNE has been run by the regulators for the last year, and it has not been in compliance for a long time," said Raphael Soifer, an analyst for Brown Brothers Harriman in New York. "The next voice you hear will be theirs."

Senior company officials declined to comment on whether



regulatory action was imminent but acknowledged that they faced an uphill battle. "We're swimming against the tide," said one official.

The size of the provision and the loss were greater than analysts expected. The stock closed

Here's What Banks Can Do

Consultants' recommendations:

- Reallocate capital to high ROE business
- Prune employee ranks by up to 15%
- Counsel customers in order to preserve relationships
- Have vendors handle data processing and other back-office services
- Scrutinize younger managers less familiar with pitfalls in downturns
- Review regional economies for strengths, weaknesses; diversify business

A Silver Lining Seen in Recession: It Will Force Needed Restructurings

By ROBERT M. GARSSON

WASHINGTON — Will the banking industry, which finds itself mired in crisis at the end of the longest peacetime expansion on record, find salvation in recession?

Some analysts say a sour economy could be just the tonic for an industry that has long been reluctant to trim overhead and reallocate capital away from businesses with low returns.

Opportunity Detected

"The downturn gives banks a good excuse to do what they should have been doing all along," said Ed Furash, president of Furash & Co., a Washington-based bank consulting firm. Bankers are optimists by nature, he said, and in good times they are reluctant to take tough action to bring their own house in order.

A prolonged recession could prove bitter medicine for an industry that has already seen its earnings base eroded by mounting loan losses, rising deposit insurance premiums, and new demands from regulators to raise

Freddie Mac Stock Drops On Loan Losses

By FRED VOGELSTEIN

Spooked by any sign of financial vulnerability, investors took aim at Federal Home Loan Mortgage Corp. Friday after it disclosed losses in its mortgage portfolio.

Heavy selling drove Freddie Mac's stock down 18% to $31 by 2:30 p.m. as nearly three million shares were traded by midafternoon.

Sparking the selloff was the company's announcement Thursday that it was writing off $81 million in apartment loans and had suspended a portion of its apartment-loan purchase program.

Pressure Building Up

Aside from the immediate impact on earnings, analysts and investors are concerned that the disclosure will increase Congressional pressure to raise the capital ratios at both Freddie Mac and its competitor, the Federal National Mortgage Association (Fannie Mae).

Analysts responded on Friday

COMMENT/ *By Paul Nadler*

Colleges Stress Research To Detriment of Students

When a bank sponsors a business conference, the usual topics are matters of concern to customers: interest rates, the outlook for business activity, and tax policy. After all, a bank's relationships with its customers basically concern pocketbook issues.

At a recent Business Trends Luncheon sponsored by Norwest Bank of Cedar Rapids, Iowa, the main topic was a major expense in most Americans' budgets: the cost of their children's college education.

The featured speaker was Hunter R. Rawlings 3d, president of the University of Iowa, who minced no words in telling Norwest's guests that our colleges are failing our students and that drastic change is needed.

Shift to Research

One hundred years ago, Mr. Rawlings pointed out, American colleges switched from the English model of emphasizing aristocratic education to the German model of stressing research. Mr. Chipps was retired, and the schools developed a professionalism dominated by the sciences.

In this regard, we have also seen the efforts to make the social sciences into exact sciences, too, which helps explain why the quantitative economics our kids are taught differs so much from the "real world" economics we need in banking.

In any event, the United States became the best at developing the research university. Whereas the best students from around the world used to go to schools like Oxford and Cambridge, now the vast majority are attracted to America's research universities, with the result that we train the world's future leaders and also attract talent that stays and helps advance our own nation.

A Stiff Price

But, as Mr. Rawlings stressed, the price we pay for becoming a nation whose universities stress research has become too high. This price is being paid by undergraduates and their parents as our universities have built wide gulfs between faculty and students and between disciplines.

As a result, our undergraduates are getting short shrift, which is adversely affecting their ability to write, speak, and read. Bankers who have interviewed recent graduates for jobs would certainly say "Amen" to this.

What must we do? Mr. Rawlings had some suggestions:

- Schools should stop trying to be alike. All schools cannot be involved in all fields, except at the price of mediocrity.
- The "multiversity" must be reintegrated with a sense of common purpose, a stress on the human environment, and increased social concern about the problems of our cities, our minorities, and the day-to-day challenges of living – which abstract research neglects.

- Finally, colleges must again concern themselves with their customers, the students, so that they get value for their tuition, which is continuing to rise more rapidly than the inflation rate.

In sum, Mr. Rawlings stresses that we must reinvent the university – concerned with all – and turn away from the multiversity, in which each discipline concerns itself only with its own special issues.

The fact that so many colleges today cannot attract the student bodies they need provides stark evidence that higher education is in trouble.

Elementary Step

But Mr. Rawlings goes further and suggests that we must also look deeper and provide the prestige and rewards at the elementary level, even if it means stressing this over higher education. The raw material the colleges get has been sadly neglected in much of our precollege educational structure.

Companies, and especially banks, spend so much of their resources on educating employees because they must make up for the failures of our educational structure.

One has to conclude that Norwest stressed a top pocketbook issue in having Mr. Rawlings as a speaker. But naturally, an Iowa bank meeting must also discuss agriculture. And ironically, Mr. Neil Harl of Iowa State University stressed the same issue of meeting customer needs and downgrading traditional practice that Mr. Rawlings addressed.

The Subsidy Quandary

Government aid has provided as much as 83% of total net income for farmers in some states, Mr. Harl revealed, making one wonder whether our job is to produce food to be eaten or to be stored in government warehouses until it rots, as has been the case with dairy products in some years.

"Why do we idle some of our most fertile land and subsidize production on some of the most barren land?" he asked, stressing that free-market agricultural policies in production and marketing are desperately needed, both at home and abroad.

Both speakers cried out for common sense. Listen to the customers and let the market work, something that Eastern Europe is finally being forced to learn just as we seem to be turning more and more away from these principles.

While one might, at first, question why Norwest should invite community leaders to discuss these issues instead of financial ones, after hearing what these two authorities had to say one might question how a bank interested in its customers and community could stress anything else in 1990. ☐

Mr. Nadler is a contributing editor of the *American Banker* and professor of finance at the Rutgers University Graduate School of Management.

COMMENT/ *By James B. Watt*

Paradox: New Leverage Rule Reduces Capital Standards

Determining the "right" level of capital has divided regulators and bankers for years. All agree that banks need strong capital, but everyone has a different perspective on how much capital a bank should hold.

In the context of the S&L crisis, the current discussion of capital standards could not be more important.

It's an old argument – and a sound one – that the capital requirement for a bank should reflect the riskiness of the assets it holds.

Some would argue that the bank examination process takes care of this by classifying credits as substandard, doubtful, and loss and by adjusting the required capital ratio accordingly.

In the savings and loan industry, that examination process broke down. With that example, responsible regulators began the search for objective, risk-based standards.

In 1988, the Basel Committee on Banking Regulations and Supervisory Practices met to develop cooperative capital standards for international money-center banks.

The committee members wanted to develop a system that would consider off-balance-sheet liabilities, encourage Japanese banks to revise their capital accounting, and create an international "level playing field" on capital.

The committee's agreement on a capital formula for international money-center banks was a major achievement. With the new standards, multinational businesses would be assured that the capital standards of the financial institutions they dealt with would be consistent. This consistency is vital for successful worldwide commerce.

Bandwagon Effect

Once the international agreement had been struck, federal regulators reasoned that if the risk-based formula was good for international money-center banks, it ought to be good for all American banks.

In the name of international parity, the three federal agencies quickly issued regulations that extended the international risk-based capital standards to all American banks.

It doesn't follow that the risk-based formula developed for international banks should be applied to all U.S. banks.

The Problem

Almost everyone supports the concept of risk-based capital standards, but it doesn't follow that the risk-based formula developed for money-center and international banks should be applied to all U.S. banks.

A blanket extension of international standards to local American banking units disregards these facts:

- The U.S. banking structure is unique. Through a system of dual chartering, the United States maintains a strong community-based banking structure. While most other developed countries have highly centralized banking structures, much of American banking is still a local or regional business.
- Money-center banks disperse risk worldwide and engage in very sophisticated financial activity. The risk for community and regional bank is less geographically diffuse, more local, and more dependent on variations in local economic activity.
- The assets of money-center and international banks differ substantially from those of community or regional banks.

One could go on with a long list of differences between money center/international banks and community/regional banks. No one could deny that these businesses are different; capital regulations should take account of these distinctions.

Minimum Leverage Ratio

The debate over a minimum leverage ratio brought into sharp focus the differences between money center/international banks and the vast majority of U.S. banks.

For many American banking organizations, a bonanza might have resulted from the interna-

Congress Plucks PACs as Fed Acts on Bank Powers

By KEVIN METZ

Political action committees representing banks and insurance companies have poured millions into congressional campaigns this year, but Congress's stalling on key banking issues has prompted the Federal Reserve Board to begin deregulation on its own.

In the past four years, banking and insurance PACs have spent more than $18 million combined on hundreds of congressional races, but the only significant deregulation bill this session died before reaching the floor of the House after being approved by the Senate 94-2.

Which PACs Gave the Most

ABA dominates industry's political contributions

	1988	1990*
American Bankers Association	$1,345,083	$754,709
Barnett Banks of Florida	375,700	186,750
Citicorp	401,223	172,513
J.P. Morgan and Co.	445,900	133,450
Independent Bankers Association	177,290	67,575
NCNB	131,560	53,500
BankAmerica	111,573	49,577
First Chicago	119,483	41,100
Bankers Trust	170,450	41,000
Manufacturers Hanover	95,875	40,500
Chemical Bank	190,640	34,350
Chase Manhattan	154,320	32,072
Suntrust Banks	124,940	30,100

A Money-Making Scam?

"There's a sense that this has become a money-making scam for the Congress and the substantive issues never get resolved," said Michael Lovendusky, a lawyer for the American Insurance Association, which opposes bank deregulation.

"In a way, it's become counterproductive because, year after year, Congress makes motions as if they're going to make some progress and then it goes away – and gives Congress another money-making opportunity," he said.

Counterproductive or not, the campaign money continues to flow.

By July, the banking and insurance industries had distributed $4 million to Democrats and Republicans alike but mainly to incumbents.

At stake is banks' hotly opposed desire to expand into insurance and securities underwriting, real estate, and other areas. All the affected industries oppose banks' intrusion into their markets, but banks argue that restrictions on their powers make them uncompetitive in the global economy.

Generous Donations

Banking PACs, led by the American Bankers Association, have already given more than $1.7 million for 282 House and Senate races in 1990, according to the most recent Federal Election Commission records.

When candidates file their next disclosure reports with the FEC later this month, the totals are expected to be much higher.

"Money buys power, and money buys access, and there's simply no more powerful lobby in the United States than the ABA," said onetime bank president Edward Mrkvicka Jr., who is now a banking consultant.

Meanwhile, insurance industry PACs, led by the National Association of Life Underwriters, have already contributed more than $2.2 million to 228 candidates in the 1990 elections, records showed.

Knowing Your Place

"We feel the law that was passed during the Depression was designed to protect individuals, and we feel banks should continue to concentrate on banking and insurance should concentrate on insurance," said Jay Morris, spokesman for the insurance group.

Most people in the insurance industry agree that Congress and the Federal Reserve Board should leave intact the 1933 Glass-Steagall Act, which forbids banks to enter many financial fields.

While much of the PAC money is directed at key members of the House and Senate banking and commerce committees, many incumbents share in the windfall. Some challengers have also received contributions, as PACs try to hedge their bets. Republicans, as befits their minority status, got about 42% of bank PACs' contributions and 45% of those from insurance PACs.

During the 1988 congressional campaigns, Senate Banking Committee members alone got $855,106 from commercial-bank PACs, $701,235 from insurance PACs, and $483,912 from securities-industry PACs, according to a report by the Center for Responsive Politics.

House Banking Committee members got $1,591,288 from bank PACs, $631,990 from insurance PACs, and $462,125 from securities PACs, the report said.

Sen. Donald W. Riegle, D-Mich., then chairman of the securities subcommittee and now chairman of the Senate Banking Committee, led all congressional candidates, reaping almost $144,000 from commercial banks and another $129,000 from insurance PACs in his 1988 reelection race.

"There are better ways to do this, [but] this is the way it's done now," said Kenneth Guenther, executive vice president of the Independent Bankers Association of America. PACs are a necessity, he said, because "you've got to be a player."

Fed Acts on Own

While Congress continues to reap campaign contributions sown by financial industry warfare, the Federal Reserve Board has moved on its own toward deregulation.

Most recently, the Fed moved to allow the banking firm of J.P. Morgan & Co. to begin limited equity underwriting, reigniting the debate over banking reform

at a time when the industry itself seems to be in peril.

"When you have an industry, which for the first time is in danger of collapsing, why would they expand into new markets?" asked Mr. Mrkvicka, the banking consultant. "Bankers of today are no more astute at what they do than they were in the 1920s. This is not the time to expand."

"It's not quite as bad as the S&Ls," he said, "but in a very short time and unless something's done, it could make the S&L crisis look like a minor inconvenience."

A Fragile Industry

Since 1985, 844 commercial banks have failed, almost five times as many as in the first half of the 1980s, according to the Federal Deposit Insurance Corp.

Comparisons to the savings and loan crisis remain premature, according to most industry experts, but some contend that expansion could seriously jeopardize an already fragile industry. Because of this, some have asked whether banks should be trying to extend their capital into riskier financial arenas.

> *"Any modification of Glass-Steagall [must] include efficient, functioning regulations and firewalls to protect depositors."*

> Congressional Aide

"The money-center banks are suffering directly because of their venturing into nontraditional areas," said Mr. Lovendusky of the American Insurance Association. "Regional banks tend to be in a much stronger position, and we would argue that those successful banks are successful because they don't venture into these nontraditional banking interests."

Mr. Guenther disagreed, arguing that Fed Chairman Alan Greenspan's slow, cautious approach to expansion was in the best interest of well-capitalized banks.

"I don't consider it dangerous at all because the Fed has been moving very carefully," he said. "We think this type of controlled expansion is very wise. We would be 100% supportive of that Greenspan approach. It would be silly to allow undercapitalized banks into this riskier area."

The Fed's move to allow some banks limited corporate debt and equity underwriting powers employed a loophole in Glass-Steagall that lets banks enter otherwise prohibited areas as long as they are not "principally engaged" in them.

"It opened a window; it doesn't open a door," Mr. Guenther said of the loophole.

Banks must still apply to the Fed for permission to trade in securities. Still, the Fed's action could appear – by sidestepping congressional procrastination on banking deregulation – to conflict with Congress's constitutional power to regulate commerce.

Dennis Fitzgibbons, a spokesman for Rep. John D. Dingell D-Mich., said his boss has been critical of previous Fed initiatives.

"This is rightfully the jurisdiction of the Congress," Mr. Fitzgibbons said. Rep. Dingell, chairman of the House Energy and Commerce Committee, fought the House Banking Committee for jurisdiction over a 1988 bill, which did not reach a House vote.

"Any modification of Glass-Steagall [must] include efficient, functioning regulations and firewalls to protect depositors," Mr. Fitzgibbons said.

Unfair Advantages

Larger capital reserves, access to consumer credit information, and the temptation to coerce bank customers into buying expanded banking services are among the unfair advantages Mr. Morris and other insurance industry spokesmen feel commercial banks would bring to the market.

"To allow banks into the business of insurance would give them an unfair advantage," Mr. Lovendusky said. "It would allow them to risk their bank customers' capital on risky insurance ventures."

However, the banking industry counters that banks "deserve – either by congressional action or regulatory action – increased ability to offer insurance products and securities products," according to Mr. Guenther.

In fact, he said, Fed action is preferable because, if Congress overturned Glass-Steagall, that "would open the door for banks to buy investment companies and investment companies to buy banks, and we feel this leads to unwise financial concentration."

While the debate over deregulation continues, Congress has no specific pending legislation, and the Fed appears to be content to chip away at the 57-year-old law. □
